If you don't feel the need for a radio operator, and your oars are well tied down, what other emergency could you ever have? Which brings us to the awful question: Do you really need a radio operator at all, if you have a wife with a laptop, an e-mail account and a satellite account. Oh-Oh! There goes the battery again. Those satellite terminals are neat for truck drivers and everybody else for that matter, and I have demo'd a satellite phone that will operate anywhere in NA that looks like a laptop computer (antenna is in the lid) You open up the lid and move the whole unit around until the meter reads into the green and pick up the handset and make your call. There is also a cell phone that has an accessory attachment that contains a converter and satellite antenna that allows you to do the same thing.

Goodies like these would seem to make the radioman obsolete, but maybe you need someone on board to operate all these gadgets anyway. If that is the case wouldn't you want someone with a whole bunch of tricks in his arsenal, including ham radio and CW capability?

Wouldn't it be neat if life were like a bowling alley, where all life's messes are swept away and the pins reset automatically? But they still need someone to fix the jams on the pin machine.

What I'm getting at, If you can't depend on a telephone line, you probably need some kind of wireless intervention for your communications. And since no single device has the simplicity and versatility and operating procedures of the land-line telephone that we use every day, we will have to carry around a lot more than an emergency phone list. If I could only take one radio with me on the road, It would be an HF mobile and it would have CW capability because I know what it is worth. If I could take two, I would add a cell phone.

Jim, ac6tk

That is incorrect. If it is your contention that my saying that a test that
has not caused major problems is faulty, I think that this conversation is
no longer conversation, but has devolved into some sort of game.

Sorry. I don't want to play. Please do engage me in conversation when you
seriously want discourse and to hear my ideas.

With the additional provision that you also have to factor in "relative to
the technology of the day," I agree.

The average ham of today may know more than the average ham of the 1950s.
The highly technical ham of today probably does know more than the highly
technical ham of the 50s, on average.

Ed,

I did my saving nearly 25 years ago and made a committment to the League
at the same time by becoming a Life Member in 1977 or 1978.  My concern
is for those who are not Life Members.  You can't say that I'm guilty of
the "I've got mine" syndrome.  I've been a League member for all but a
few years (during some of my time in the Air Force) since 1964.  Had it
not been for the (then) pathetic wages paid by the League, I'd have been
a staffer in 1975.

Buncha crap. The only stuff I'd leave in the free-access space would be material which promotes ham radio and ARRL membership, publications, etc. pretty much like it is. But TIS *absolutely* gotta be moved into the member's space. If I read one of his posts correctly, Ed is moving in that direction.

The explanation was in response to a statement that the dues increase was not justifiable with the present low rate of inflation. I really can't think of a better way to have resonded than to express the dues increase in terms of a per-annum increase.

Do you have any suggestions as to how Jon could have answered it better?

Why do you say that, Ed?

I think the ARRL Technical Information Service is good for amateur
technical information. In what way did you think I was "unhappy"
about such a web address?

>I don't know whether you are not being forthright or are just forgetful
>in your old age. I did not seek any praise.

Sure you sought praise. You thought it was a clever idea...of yours.

You were indulging in relating a story of your expertise on a government radio circuit, knowing full well that few on an amateur radio newsgroup would have experience there (with exception of a few ex-USN-radio-ops of earlier times).

Technically, switching over to CW from FSK TTY should be possible but it is a most odd sort of thing to use as an order-wire (a command circuit for radio circuit purposes).

You claimed the switchover was "necessary to synchronize" the TTY circuit. TTYs have always self-synchronized since the first Teletype Model 15s, whether on landline or radio circuits. A Model 28 is no different in that regard.

On a following reply you stated that the "synchronizations" were to "set schedules." That was illogical since, if the TTY was operating correctly, it could be used as a TTY to send schedules, copies printed at each end.

> I did not come up with the
>circuit. I simply used what was already in place. As I recall, you
>tried telling me that what I stated was untrue.

I said it was a dumb idea if you did it that way. I still think so.

While technically possible if the TTY transmitter also had OOK CW capability, there were no technical justifications for this. You seemed to be trying to get an "upper hand" in an on-going argument in a newsgroup on the necessity to operate OOK CW and preserve morse code testing for an amateur license.

You are now welcome to state why that particular switch from TTY to CW was technically or opeationally necessary. For any reason. It doesn't really matter but it will be interesting to see the rationalizations and attempts to close with the last newsgroup word.   :-)

Sorry, Ed, but apologia for ARRL decisions criticized negatively
by others having opposite viewpoints is SPIN, or political
damage control. The ARRL BoD's decision on morse code
testing was political in nature (see following).

>> That brings up another point. The ARRL seeks to determine
>> amateur radio licensing requirements through policy
>> statements and lobbying in DC. It is rather obvious to those
>> NOT members that such influence by already-licensed
>> amateurs (in the membership) would have them set policy
>> so as to keep requirements that the members met.
>
>If it was "rather obvious," perhaps the League could have "rather obviously"
>not chosen its new position wrt international code testing.

No, Ed, RATHER OBVIOUS in terms of the last half century.

Note that the BoD did NOT make any definitive statement on
FCC regulations for amateur radio license testing...they simply
let it slide by saying it should stay the same. The change in
policy position was in regard to ITU-R S25.5, not Part 97. The
ARRL cannot vote in the ITU-R since it is not part of the
US administration party. The ARRL can be an observer and
advisor to the administration, but cannot itself vote.

What was decided was a POLITICAL viewpoint with relationship
to the IARU and other nations' amateur radio organizations...
with some relationship to influencing the USA administration
at future WRCs. Political viewpoints are expressed as Spin,

not as factual data.

>> Those who struggled to achieve proficiency in morse code once
>> are now older, more set in their ways, and have the time
>> to want to continue with it.
>
>I struggled with and achieved proficiency in Morse code, Len.

I wasn't specifically naming you in that regard, Ed.

As a GENERALITY of observation of human nature, those who have struggled with something when young tend towards retention of winning struggles with both ability and nostalgia.

What is dictatorial is that SOME who have achieved skill in the past seek to impose the same need for all who come later in time...especially so for morse code as an amateur radio license test necessity when regulatory agencies have stated that such skill is necessary for their license determination requirements.

>> I cannot divine what is in the minds of the episcopate, that
>> group of "bishops" who would set out standards of everything
>> for a congregation. Everyone can only surmise their actions
>> based on past decisions...which has been rather constant in

>
>Getting a bit esoteric for me, Len. Can you restate that without all the
>fluff and 'buzzwords?'

It is not "fluff" or "buzzwords," but they ARE labels.

I was speaking in general to those who have a religious feeling towards amateur radio and feel that the ARRL BoD is the episcopate (a group of bishops) of "the church." The "apostles" label is directed towards the supporters of the first formation of the ARRL.

Some will not take kindly to such labels. TS. Neither is it irreligious, but rather sarcastic. Again, TS. The almost-religious devotion to the League by some is apparent to others.

Don't buy any form of League membership if you care about the integrity of your license or ham radio. The ARRL will screw you when your head is turned. Buy a membership only if you believe that the natural progression of amateur radio should be to become more like CB, for this is what the ARRL board of directors believe.

The ARRL isn't working to improve anything. They say they're working to protect your service but then they propose limp-wristed policy changes and

watch the service rot from within.
  If you want to save ham radio, then cancel your League membership as
soon as possible if you have one. Don't be a part of the Leagues plan to
furthur dumb-down ham radio and don't support their slight-of-hand policy
changes which welcome ignorant operators and CB style operating practices.

I believe that the League's dues are a good _value_ for the price. The ARRL supports a similar level and type of activities as the IEEE. For the IEEE membership, I pay $113/year base rate (includes US Regional assessment), but excluding technical societies I choose to belong to. This is about 3 times the new ARRL dues rate for a similar type service. I just don't see how anyone can say that memberships are overpriced, especially when we see the League activities that benefit all hams. Now if we could just get more of those "all hams" to join :)

I believe if the League were to drop their opposition to elimination of mandatory US Morse cw testing, they could attract a significant percentage of the rapidly growing Tech class licensees. Especially if they were to offer a first-year, half price special. Give it some thought Jon. (I keep beating up on my Director about the code issue)

I must have left off what I believe to be the logical addition that, Vince; although I am certain that some hams will choose that path, I think it highly unlikely that most will choose not to learn within ham radio. Almost all of us here have learned a lot more than we learned to take our tests. I believe that a desire to learn is what motivates most hams to become hams in the first place.

Sorry I left it off, but I guess I didn't think it necessary to say it. I didn't mean to make you misunderstand.

The same battery you will use to power the HW-7, or a different battery?

> If that is the case wouldn't you want someone with a whole bunch of tricks in
>his arsenal, including ham radio and CW capability?

Sure, and if I go camping, and something goes wrong, I would want someone
around trained in wilderness rescue.

>If I could only take one radio with me on the
>road, It would be an HF mobile and it would have CW capability because
>I know what it is worth. If I could take two, I would add a cell phone.

Depending where I was going, I would choose either a cell phone, an HT or an
all mode rig. If I felt using the all-mode rig, I would use SSB as my first
choice; it conserves battery power and in plain language, I can communicate a
lot of information in a small amount of time.

If all that failed, I would be glad I know Morse code.

I will add that, as a CW op, if I ran across the 1 wpm SOS from someone using a
lookup chart, I would stick it out.

Hey guys! You ought to pop in at rec.radio.cb and see these dorks blow chunks
and gaskets when I tell them they are illegal. Come on and get in on the fun
f'n with the illegal keyclowns. Lots of neat sites also. Easy to piss off
these loosers bwaaaaaaahahahaaaaaa

>retaining/dropping Morse Code testing when it is finally dropped from the
>ITU treaty requirements.

I have little doubt that the ARRL Board will re-examine the issue when it appears that it will come up at the US regulatory level. I don't know what decision the Board will reach. That will depend on member input, I am sure. Rest assured, I will be communicating with Tom on a regular basis on a lot of issues, and this will be one of them. I would imagine that your note to Mr Race told him what you thought the results of the re-examination should be. The Board will probably re-examine it, but could decide to drop it, to keep it the same, or to ask for some sort of change.

My personal view is that the "Sohl" proposal, as I call it after his Correspondence piece in QST, to keep some code-copying testing in the exams, but include the results of the questions along with all of the other questions. That keeps code testing on a par with other modes that are important to amateur radio operation.

As a code guy, I think it is important that the applicant be exposed to the code from the getgo and that he or she be given as much opportunity to learn it as other modes. To me, this is probably a compromise position that both sides should consider.

>But it could just as well go the other way, too. Hmmm?

I think so. The ARRL Board will have another interesting meeting, I am sure.
Member input, now, and when it comes up again, will be important. I think the
Board should hear from all sides of this issue. This time, however, I wish
that they would hear from more people in the middle. With that in mind, I will
tell Tom when I next bother him about this that although I express views, I
don't think that Morse code testing is in the top 10 imporant issues facing
Amateur Radio. :-)

>From: Cecil Cecil.A.Moore@IEEE.org

>The next board may be made up of completely different people.

If memory serves, the ARRL Board has as members 9 people who were not Directors the last time the Board set ARRL policy.

>If you believe your opinion to be the majority opinion, it shouldn't
>take too much work to load the next board with pro-code-test people.

Or vice versa. Member input is important. I do know that the member input in some Divisions was quite different from the member input in others. At least one Director immediately recognized the "organization-based" input, with a group of pro-code folks all writing at the same time, then a group of no-code-test folks writing a bit later, as FISTS and NCI asked its members to contact ARRL. :-) The hard part, IMHO, is figuring out how important this issue is to the folks in the middle.

Yes, and to the Board of other organizations that you think may also file comments to the FCC.

Most important, though, is when this comes up as a rulemaking issue, whether as a Notice of Inquiry or NPRM, make your views known to the FCC.

Not necessary - any kid ready to "experiment" should
be capable of passing the codeless tech, even if by rote
memory.  My girlfriend knew nothing about radio, and it
took her 2 weeks with practice exams to earn a perfect
score.

QRM, Steven has a valid point.  Stewart may put forth
mostly silly ideas, but I don't recall any that weren't
on-topic to the extent that they involved FRS radio.

Your idea to have him post separately to each newsgroup
```

```
would certainly limit the number of responses we see,
but I imagine that he does not want that limitation.

Care to put a lobster-dinner wager on whether QST runs a Product Review on a CB
transmitter, an echo-microphone or an 11-meter amplifier before the next dues
increase?

>>Can anybody tell me what are the benefits of  becoming a Life Member of
>>the ARRL. Thanks

   Please don't pay any attention to the rantings from Vince.  He
apparently has a beef with ARRL.  While the ARRL's policies may not be
agreeable to every ham,  they are the only organization with any clout to
stand between the amateur community and the FCC and a Spectrum hungry
Congress that would love to sell off our frequencies to business users..
As for benefits to becoming a life member,  kinda depends on your motives
and your age.  If you're young, it's probably fiscally prudent.  If you
wish to support the ARRL and its objectives, that would be good too.

>You don't get bothered 4 months before your subcription is up.

What would bother me is if they didn't ask me to renew until 4 months AFTER my subscription was up. :-)

Actually, the other magazines to which I subscribe have about the same time frame. If everybody else gave you 4 months to pay a bill, would you call it a bother? :-)

>From: Brian Kelly kelly@dvol.com

>No freeloader access to info which only benefits them.

Maybe. There is significant value to having good information available on the public site, too.

A good analogy I like to use is a store. If the merchandise is not displayed, no one will know it is there. How much would you buy if you could only look at the outside of the box? How would you react if you walked into a store and the proprietor asked you if you had ever been there before and if you said no, told you you couldn't come in unless you bought something first. Not a warm welcome to a new customer.

What about help for the new ham? Is it not in the interests of Amateur Radio to help new hams get started so they stay hams? What about industry and the FCC and a host of others who look at web sites on amateur radio for a number of reasons. Should I make http://www.arrl.org/tis/info/rfi-elect.html a members-only feature? How about RFI in general, or the page on the RF-exposure regulations?

And should the public page not have news about Amateur Radio and the ARRL? Of all of the member-association sites I know of with members-only sections, most have significant public information. The "news feed" on all of these sites is public. I think that having significant public information lets a ham who may not know much about ARRL judge what the organization is, what it does and whether he or she feels it important to be a member.

And, from an organizationally selfish point of view, bringing hams to the site makes it easier to sell them books that help keep the cost of your membership down. :-)

I think that the industry liason work should take top priority. We gotta focus
on stopping the production of devices which generate RFI rather than "fixing"
the RFI sfter it shows up per your 3.5 Mhz modem work. That's like closing the
gate after the horse got loose. These computers are hideous RFI generators, nag
the FCC, this is ridiculous.
>

> but I definately want to

I'm sorry; I was directing that to some on this forum who call every instance of one ham not being unkind to another "political correctness."

>It was one human being helping another, a ham
>mentoring someone who wanted to be come a ham.

I agree wholeheartedly, although I am sure someone one will tell you that you were a bleeding heart with your love beads doing only because you are politically correct. :-)

Hey, wasn't it YOU who brought love beads into this? :-)

>Using the total US population for comparison might make us look better
>technically as a group simply because of the large growth of ham radio
>compared to the total population.

I agree. I also think it is more accurate to use the entire body of evidence
for comparison.

>But if you wanted to compare the average amount of technical
>hams in 1960 to the average amount of technical hams in 2000, it would have to be referenced as a
>percentage of total hams (for each time period) to reach any kind of
>valid comparison.

I disagree. As you said, comparing to the whole gives a better idea about the
relative number of technical hams. Which do you think is a better goal -- to
have more technical hams, irrespective of the total number of hams, or to have
a greater percentage of technical hams, irrespective of the total number of
technical hams? If all of the non-technical hams (I don't even know how you
would define that -- perhaps you could keep asking them on usenet if a test
that doesn't test knowledge is a test) quit, the percentage of technical hams
would be 100%; would the technical value of Amateur Radio change in the
positive direction? I think not, because those "non-technical hams," are not
totally devoid of technical knowledge; this is not another black and white or
yes and no answer.

> I don't know how you would ever do that (for many
>reasons), but I have a definite opinion on what the answer would be...
>:-)

I am sure the answer would have to be "yes" or "no" or you would keep asking
the question. :-)

That is exactly what I am saying. Although I do see ways that the present tests should be improved, I think that testing that has not created major problems in 40 years of being at about the same level is not an invalid test, to use your words.

Maybe I will have to condense that chapter into an article. It has a lot of
good troubleshooting tips that are useful for today's complex SMD rigs.

Tell you what, Aaron; send me your mailing address and I will send you a 2000
Handbook I salvaged from the bent-cover bin. :-)

I agree, but if it is sensational, the press will cover it. They may get it
wrong, but they will get it.

>The problem with gadgets and emergencies, is that you need a real
>emergency in order to test their efficiency.

I am not sure that the emergency equipment of today is all that complex. If I designed it, I would design it such that the operator pushed a button and the "SOS" was sent. I bet that such equipment is more reliable than the HW-7 that you used as an example.

>> Per-annum, Dave. You know, the same basis on which inflation is usually
>> stated.

>But that wasn't stated by me or by you, Jon.

Sure it was, Dave. You stated that the dues rate was excessive wrt inflation. Inflation has an implied "per time" factor built in to the very meaning of the word. In the context you used it, the only way to compare the dues increase to inflation is to go back to the last dues increase and compare the increase to inflation over that time. Most inflation figures are reported on a percentage vs time basis (usually annual) so the easiest way to compare them is to give the annual rate of the dues increase as a percentage. Jon did so, and added the per-annum qualifier to make it more clear.

> Without the qualifier, the one-time hike is much steeper.

If you feel that the ARRL should increase the dues every year at a rate that matches the general inflation rate instead of catching up every four years, you should suggest that to your Director. When you do, keep in mind the way the League did t this time saved you about $7.00 over the 4 years it did not increase the dues.

>problem.

How much would it cost you each additional year after this if the dues had increased 3.5% every year since the last dues increase? The number are the same from this point onward whether the dues increase happened in one chunk as it did, or at a 3.5% rate every year. The way it is done, you have $7 more in your pocket; I can't see why you are displeased.

> Not everyone thinks in accountingese. I'd venture that most people don't.

Dick, this is not complex; it is junior high school math.

encouraged.

I agree, although we may start seeing more of those web services be made available on a members-only basis. IMHO, the line should be set such that the things that benefit Amateur Radio as a whole are on the public site, while those things that are a help to an individual ham should be a membership service. IMHO, however, helping new hams get started is for the Good of the Service, so that info will remain public. Over the coming months, I may be moving some of the QST reprints on the TIS page to members-only.

This last dues increase did drive home a point to me that the work ARRL does that benefits all hams (the RFI program and the web pages are excellent examples) is being funded by members. Those non-members that make use of those services should at least send an ARRL member a thank you. :-)

73,
Ed Hare, W1RFI

>accomplished.

Yes, but it is also a good example of what kind of information about ARRL activities should be made available to members. I will use my own work as an example because I can criticize what I haven't done without offending anyone, I think. :-) I did not write up or publish the papers I presented to the T1E1.4 VDSL standards committee, nor describe much about the work I have done with the HomePhoneNetworking folks that helped them include a notch from 7.0-7.3 MHz in their product specification, although we did feature a web piece on some of the testing we did over Thanksgiving weekend. I could go on, but the point is that, IMHO, ARRL has not done a good job communicating this sort of thing to its members. I can give you my excuses -- I moved on to the next emergency. Fortunately, one of the justifications I used for hiring someone to tackle RFI to hams head on was that it WOULD give more time to document the work we do; as a Member, I want to know as much as I can about ARRL's advocacy work. It is THE principle reason I am a member, even after the Board may set a policy that I would have preferred to be set differently. Relatively small details about the choice of words in the recent Board resolution pale, IMHO, in comparison to some of the critical work being done to protect spectrum. (Protection from noise from unlicensed devices is almost as important as keeping the allocation.)

>From: Brian Kelly kelly@dvol.com

>These computers are hideous RFI generators, nag
>the FCC, this is ridiculous.

You may not know how ridiculous. A "legal" signal from an intentional radiator on 3.5 MHz would be S9+15 dB to a dipole 100 feet away. This isn't going to change, unless Amateur Radio can document widespread interference. The complicating factor is that there are other rules that stipulate that if harmful interference occurs, the Part 15 device operator has to correct it. In cases like the AT&T PX-421 modem jack problem, AT&T is doing the right thing. So far, 90% on the recall. Can't take THAT one to the FCC. What the ARRL RFI Task Group tasked me to do is to identify several clear-cut cases where there is actual harmful interference, and an operator who refuses to do the "right" thing. We are then going to take them to the FCC. IF the FCC will enforce the no-interference clause, then it can be relied upon. If not, then we cannot live with the limits.

See http://www.arrl.org/tis/info/part15.html for ARRL's info on Part 15 devices. Don't tell Len; he gets very unhappy when I post the URL. :-)

> But that wasn't stated by me or by you, Jon.

Sure it was stated by me, when I said "per annum" the first time. I thought that was a well understood term. I've since found out that there are some on this NG who don't understand it.

> Without the qualifier, the
> one-time hike is much steeper.

But the qualifier is necessary if you want to make a valid comparison between the dues increase and inflation. You can compare the anual rate of inflation to the per-annum dues increase, or you can compare the total inflation since 1997 to the percentage dues increase. In neither case is the result "outrageous" as you initially claimed. It only looks outrageous if you compare the total dues increase to the annual rate of inflation, but doing that ignores the years in which there was no change in dues and thus distorts the truth.

I am not totally sure, but I feel he is not completely for removing CW
testing requirements.

> You may find that your job is
> already done. :-) Of course, others may be trying to persuade him in the

So his view may not really matter. He is after all there to represent the
membership. So writing lets him know what at least one ARRL member thinks.

> Tom Frenaye already knows my views, but I took the time to
> reiterate them before the Board meeting.

That's what it's all about. Get your views, one side or the other, across to
the board.

If it's well documented, etc. I would expect Riley would move on it. The problem I
see with it is that the FCC can readily spank an owner of an RFI source but there
are two perps involved. One being the owner who refuses to go QRT which the FCC
can
shut down, the other is the manufacturer of the widget who probably sold a jillion
of the things. Gets very complex but it's absolutely gotta be done. I vote for
getting the limits for Class B devices 'way down, kill it before it shows up on
the
shelves and be done with it.

I agree. Gets right back to the concept of monthly staff reports in QST. Provide a
brief summary per department or noteworthy invidual's news in QST povide the the
link to the full text stored in the Web server. Or something. Needs to become a
regular column. It'll be a lot easier when QST is published on CDs.

Oh, these boils over BOD policy decisions are even nuttier, they've been underway
the whole half century I've been aware of what's up in ham radio and the sky
hasn't
falled despite the sporadic uproars. Ham radio has only gotten better over the
years, most of the beneficial changes started with BoD decisions and mandates. I
agree, my subsciption to QST is not why I'm an ARRL member.

You said:

> since 1997 when the League last upped the cost of yearly dues, it is
> outrageous.

So are you now saying that the dues increase is outrageous even if it
doesn't exceed the amount of inflation since 1997? Or are you saying
that the rate of inflation since 1997 on a per-annum basis and the total
inflation since 1997 are unrelated? (!)

Frankly, I think you are now in the Cecilian position of trying to
reinterpret your original words to mean something other than what they
say.

Jon

If that's fact I think it's far more due to today's dumbed-down FCC than it is with anything the ARRL has or hasn't done. I think it's been pretty clearly demonstrated that the FCC could care less about ham radio. The whole history of the FCC with respect to ham radio over decades has been a litany of disengagement maneuvers. When it comes to changing the regs the first thing the FCC seems to do is ask itself "First priority, guys: how can we jerk this R&O around to make life easier for US?" Once that's decided they pay cerimonial attention to commenters like the ARRL.

> Cecil a liar.

Cecil likes to twist things, and I don't think its uncivil to point that out.

Over a long period one can save a huge number of dollars for dues. I forget when life memberships became available, 1970 or so?? Dunno. I think the original cost of a life membership was around $150. If those numbers are in the ballpark a ham who bought a life membership in 1970 paid roughly $4.83 per year this year and it keeps getting lower the longer he's a member. In the limit it becomes essentially free. Depends on whether ya wanna grunt now and buy one as a long-term investment. Very long term.

  Ed: I agree completely with your remarks, with the everpresent caveat
that the applicant must actually read forunderstanding and answer the
questions on that basis.

  I have downloaded the entire current question pool, and am
disaappointed to find that, alas, there are very few questions
presrented in the sort of format of those few that you posted a few days
ago.
  My wish is that a far greater percentage of the test questions would
be formatted in just that fashion. Were all the tests to be redone in
that way, I could agree completely that the tests were indeed a valid
assesment of the applicants knowledge. But you already knew that.

73, Dick W0EX

Awhile ago I said this to the ARRL webmaster.

Whoever is setting the policy for the ARRL web site has it perfectly backwards.

The main page, open to members and non-members alike, rivals QST as a source of the latest news in ham radio. It is well done, timely, and attractive. Just the sort of thing we're willing to pay our dues to have. But we don't need to pay any dues to see it.

For those of us who pay dues, there is a "Members Only" news area. It contains lame things like Stan "surfin' the web", "youth@hamradio.fun", etc.

He wasn't impressed, and nothing changed. The "members only" side is still lame.

Good luck on this one now!

The first thread I noticed was where Dick said $5 is 14.7% of $34
and you disagreed. I had no "original words" on the subject because
I wasn't reading the thread.

>a greater percentage of technical hams, irrespective of the total number of
>technical hams?

I think it would be best to have the largest number of technical hams
possible in any time period. But that's not what I was commenting on.
I was comparing the 50's era average ham's technical abilities to the
technical abilities of today's average ham. I think the 50's average
ham wins hands down...

>non-technical hams (I don't even know how you would define that --

Perhaps it's similar to what one judge said about pornography. It's
hard to define but you know it [a tech-ham] when you see it... :-)

>perhaps you could keep asking them on usenet if a test
>that doesn't test knowledge is a [good] test)

They would probably answer the question the first time I asked it.
Unless of course their answer would undermine their own position on
the validity of today's ham tests...   :-)

I mostly confine myself to discussions that I think have some point.
When they degenerate into silliness like this I'll stick around until
I'm no longer entertained, then leave.

Depends on what you're looking for, I've made good use of the Members Only side. Locking some of the current freebies behind a password ought to be n the right direction.

>

It's a little early in the game Hans, it's not unresonable to expect the site to eventually have some multiple volumes more "stuff" in it than it has now. It ain't even started, Rome, etc.

>

There's another aspect to the whole scene. The ARRL site is very much in competion with other ham website which was not the case just a few years ago, as in QST and the ARRL are faced with a whole new ballgame as far as necessarily being the primary attention-grabber and "source of all good things" vs the good old days. Hell, dial into the ac6v site and you have more ham radio than you can deal with.

The "wall" is rather an obvious reference to the BERLIN WALL,
completed in 1961, then torn down beginning in late 1989.
[how quickly some forget...]   A barrier manned by Vopos who
killed quite a few attempting to go from east to west.

The Great Wall of China was an ineffective "WPA" structure and
did not keep out the barbarian hordes...worked about as well against
warriors with scaling ladders as European castles against siege
engines. The Great Wall of China is symbolic...as the morse
code is symbolic of amateur radio excellence. Artifacts.

You have to keep tuning in to find out yes or no.   :-)

Why do you think that everyone MUST have some sort of personal reason to argue anything? Isn't the effort of modernizing amateur regulations enough? Amateur radio is a hobby, not a lifestyle. Or is it?

Is freedom in an avocation such a dreaded thing? Must avocations have a strict regimentation in everything such that some consider it a surrogate military service?

>(This is not meant as an insult or a put down in any way.)

Could have fooled me. Even if you are sincere, AJ, there are plenty of frustrated hams who would jump at the chance to slam somebody, anybody who isn't a lodge hall member. They have, they are almost eager to do so. You've seen their output in here. :-)

Tell me why I should bow down to these self-professed "superior" individuals who want to dictate morals, ethics, jargon, and activities in a hobby? We are talking dictate as with a heavy hand, whip, chains, the whole S&M bit if one doesn't do as they order...and then respond by saying "Thank you, sir, may I have more?"   Noooo, not that way, AJ, no thanks. Another way, maybe, but keep tuning in...you never know?   :-)

One doesn't NEED a computer interface, doesn't need any UHF
TV tuner for a front end, doesn't need a computer-specific
interface unless fancy display lettering on the display that will
print to any computer printer. I've seen two, used one such
PC Card type spectrum analyzer and both versions suffer from
inaccurate and limited logarithmic range.

The Log-Amp-Detector from Analog Devices solves the log
range and accuracy problems. What was once a large PCB
full of certain semiconductors and precision resistors is now
collapsed into one package. The VCOs for the first LO
sweeper are off-the-shelf from Mini-Circuits. Front end filters
can be almost kluged together out of what parts are in the
junk box. This isn't rocket science gee-whizzery.

>the extent of their usefulness.

Then you haven't used anything with more than 20 db dynamic
range. I agree that the old-style 1940s Panadaptor wasn't much
good with its semi-linear (not logarithmic) vertical display.

What I was talking about is an indicator of signals going from
S1 on up to 40 db over S9 on a display without needing to
change knob settings. You would be able to see "weak
ones" pop up from the noise floor, see how far they were from
your current frequency, then tune over to hear them as fast as
you could tweak the tuning knob. No searching around, all
the signals within sweepwidth settings are visible. 50 or 100
KHz sweep width no problem to see CW or any other kind of

modulation on those incoming signals. Everything is on the display at once. A 1960s consumer-electronics item this ain't...none of those had as much as 60 db of accurate dynamic range. With some extra work, 100 db of dynamic range is possible (but one has to start thinking of using a display larger than 5" diameter to ease the eyes). Analog Devices has a stock Log package that can handle 100 db.

Sound interesting?   :-)

I don't see any reason to not start kicking the donkey in the behind now. That way when it gets good and ready to move it will be right on our "schedule", not its. No time like the present to get people use to the idea the code test is going down the drain. Wait a few years until the ITU treaty requirement is gone, then START fighting to get the ARRL, and the FCC to consider dropping the Code test requirement for another few years? No way.

That is exactly the approach that works best. Local stations respond more
to local viewers than they do to a request from a national organization.
Jen Hagy should be able to help, if needed.

I think that is less likely than my theory that the Board decided not to solve a problem that would not surface for at least 4 years. I think it very unlikely that the ARRL will originate petition for rulemaking that will certainly follow any change in the international treaty, but at this stage, it is not certain what the final treaty will look like or just what rules changes will be put on the table. I agree with the Board if they decided not to cross the bridge until they could see just what kind of bridge it is.

Your tightrope theory just sounds less plausible to me.

> Opportunity lost. Sigh!

If you meant the opportunity to change ARRL's policy 4 years before that policy change could have any effect on US regulations, I guess technically it is a "lost" opportunity, but this is an issue that the ARRL Board will have to address again when the inevitable FCC NPRM comes down the pike. I think anything the Board did now would be pretty much moot and may have to be re-done in response to the actual content of the NPRM,or even of the treaty itself.

As you have sat in that room, you know how difficult it can be to hammer out an understanding with 15 different viewpoints on the table at the same time. If deciding to change only the policy wrt the international treaty at this was the only way they could get enough agreement to get ANY resolution to pass, I can understand and accept it.

Hello, Leland,

I don't think the FCC is going to entertain any petition for rulemaking wrt code testing until the treaty is changed and ratified.

It is very much appropriate to start working on the ARRL Board now, by sharing your views and either convincing your ARRL Director why they should hold sway or by voting the guy out and voting a new guy in. What is your Director's views on the US requirements? You may find that your job is already done. :-) Of course, others may be trying to persuade him in the other direction. Tom Frenaye already knows my views, but I took the time to reiterate them before the Board meeting.

I agree with that too; a better selling job needs to be done. In my case, it has never been a question of belief, but of finding the time to spend 2-3 days working on an informative article before the next emergency seems to come down the pike.

I will promise to my friends here that once I get a bit more staff in the Lab to handle some of the individual RFI issues, I will put together a lot more info on what I have been up to and I will see that it gets published somewhere.

When I was a Nervous, those articles on the basics were really neat and exciting; they were high-tech to me. Now that I am a seasoned old vet, the same articles are "really dumbed down" in QST.

Go back and look at those old articles with today's eyes.

> Hams were bitching about the ARRL , the dues and QST content a half

This is not true. You are misrepresenting what I wrote, Cecil. That's
beyond the pale. I am posting this to both NGs so there's no confusion.

> I say there is at least one and probably more.

Nobody denies that. I simply refuse to play your game.

Yet you continued to post to the "no-code kills" thread long after you
promised to stop. At least 40 posts on that thread, involving all sorts
of things like your experiences in aircraft in South America, were
posted to rraa. Many were posted ONLY to rraa. Only about a third of
them involved me in any way.

> Jim, N2EY, is redirecting everything back to r.r.a.antenna where it
> doesn't belong. That's the reason for the disconnect.

You keep redirecting it because you know I don't post to policy anymore. I made this exception to avoid any more of that.

> Jim will not
> admit that there ever has been a single code-tested ham using Morse
> equipment for the purpose of jamming.

That is simply not true. I just won't play your games. So you are distorting and making stuff up about me behind my back.

> He refuses to condemn code-
> tested hams who use Morse equipment for the purpose of jamming since
> he says there never has been any.

Wrong, wrong, wrong, Cecil. I have repeatedly condemned ALL jammers on the ham bands, regardless of testing or mode. The ones you mention are a subset, and so are logically included.

> That's because any admission of
> such would violate the immaculate conception virginal religious
> aspect of Morse code to the PCTA.

Nonsense. I just won't play your games anymore.

Much of what you have written about me is simply not true, Cecil. I have pointed out your mistakes above. You will not admit them, of course.

Anyone who believes what Cecil has written can check deja.com and read my posts for themselves.

Enough of your games, Cecil. I'm sorry you are so bored that you have to spend time trying to "get other people's goats".

Game over.

I think, Jon and Dick, that the term "per annum" may have been misunderstood. If applied to a 4-year term, a per-annum rate is applied each year. After all, if one puts money in a savings account at a per-annum rate, they certainly would understand the term if the bank only applied the interest to one year. :-)

So, lets take it step by step, over 4 years.

Year 1: $34.00 + (.035 * $34.00) = $35.19
Year 2: $35.19 + (.035 * $35.19) = $36.42
Year 3 : $36.42 + (.035 * $36.42) = $37.69
Year 4: $37.69 + (.035 * $37.69) = $39.00

This worked out to 3.5% increase each year,except that no one had to pay the $35.19, the $36.42 or the $37.69; it stayed at $34.00 for those years.

Does that help?

And the increase is not retroactive. :-)

And, if you really want to beat the system, do what I just did; renew for 3
years on the ARRL web site at the $34.00 rate. That way, the increase won't
be proactive for 3 years, either. :-)

Tell you what, Cecil, to avoid this problem in the future, you can increase your dues voluntarily every year by the published rate of inflation. That way, you can avoid all the big jumps and you will be ahead of all the rest of us. Go ahead and send it to me in cash; I will go upstairs and pay your dues for you. :-)

It is no suprise that the FCC ignored the ARRL, since they
were initially demanding that the FCC continue a regulation
(13 & 20 wpm code test) that was not in conformity law
(5 USC 706).

FCC gave the ARRL plenty of opportunity to show some
leadership, but the Board said "no change". So FCC
proceeded without them and issued the License
Restructuring Decision. The ARRL ask the FCC to use

5 & 10 wpm code exams. The FCC's Report and Order said
that Morse code exam requirement served "no regulatory
purpose". So what does the ARRL Board do? They
demand the FCC continue 5 wpm code exams.

I personally advocate thpetition the United States/FCC to adopt a WRC 2003
policy to: (1) suppress ITU rule S25.5, (2) take exception to S25.5 in the
WRC 2003 Final Acts if it is nor suppressed, and (3) delete 47 CFR 97.503(a)
after the conclusion of WRC 2003 without any futher proceedings.

The so called "bridge" you claim the Board can not see is in fact a great
wall that surround Newington, casting a shadow over Board's vision.

The Board spent thirty years constructing that wall, now it scheduled
for removal in 2003.

Since the Morse code exam requirement is a public policy matter,
and the amateur radio community is about evenly divided, the ARRL Board
could have elected to take no position, and not interfere. For thirty years
the Board has act contrary to the public interest and contrary to the
interest of the majority of licensees.

I can not understand nor do I accept it.

The ARRL's comments to the FCC were plenty of change, Larry. Trying to rewrite history here?

> The ARRL ask the FCC to use 5 & 10 wpm code exams.

It was 5 and 12 wpm, if accuracy is important.

> The FCC's Report and Order said that Morse code exam requirement served
"no regulatory
> purpose". So what does the ARRL Board do? They demand the FCC continue 5
wpm code exams.

When? In its comments to the FCC for restructuring? NCI agreed that a 5 wpm test was needed to satisfy the treaty? Now? Can you tell me where and when the ARRL communicated their "demand" to the FCC? The language of the ARRL policy was clear enough to me that the League is choosing not to change its policy wrt US testing at this time.

You are misrepresenting facts, Larry. It does not reflect well on you or your goals.

Dump the lab, turn it over to somebody else and get outta there. Your RFI activities while being of a technical nature are much more political, consensus building and educational pursuits which have nothing to do with lab tests of the latest whizzy xcvrs. Considering your background and the ogre content of the exponential escalation of the number of Part 15 devices (among other threats) SOMEBODY gotta put full time into it. No point to having the latest whizzy ricebox which got five stars in the reviews if the bands are garbaged. Tag, you're it.

In taking a long, hard look at what the ARRL offers and does,
I would say a $45 to $50 annual membership is reasonable for
the membership advantages.

That is outside of the "QST subscription." QST should be able
to self-support based on advertising sales for a "captive"
170 K or so readership per month.

All the other services should be worth the increased price of
membership IMHO.

In my case and that of many others, the issue is less about
cost than of what the BoD decides is good for the member-
ship...or for the US amateur radio community as a whole,
in particular the license testing regulations.

While I did not expect boldness and vision in leadership, I am
heartened that the BoD went as far as it did. Given the past

emphasis on morse code abilities thought necessary for all radio amateurs, the BoD decision seemed to be a Major Upheaval in Attitude! I have to give the BoD a warm round of applause in appreciation of actually getting around to changing its collective mind!

It will now be interesting to see what happens with revised Agendas for WRC-2003 after the International Bureau's meeting of 30 January 2001 on Agenda item details.   :-)

Note: The present agenda for WRC-2003 carries a non-specific statement concerning "S25" (not S25.5 but only of all standards inclusive in regard to amateur radio). If the ARRL has any clout left with the FCC, the new agenda may show something less general than it does now.

>Very few hams have a spectrum analyzer.

On one hand, a TxPorter from Motron is considered "valuable" at $800 for fingerprinting repeater kerchunkers, but a spectrum analyzer is not considered good?

An MF to VHF amateur spectrum analyzer can be built for less than $400 in essential parts, using an old oscilloscope for a display. Analog Devices has some excellent logarithmic amplifier-successive-detector ICs that can yield an 80 db dynamic range. Mini-Circuits has a line of good VCOs (Voltage Controlled Oscillators) that can serve as the first L.O. swept by a 555 timer generating a sawtooth waveform. Up-convert the first mixer output, filter it with a high-Q resonator, then down-convert to a choice of narrow filters. The Agilent (new name for HP Test and Measurement Div.) website has some excellent free download tutorials which explain the principles. Other than the essential items mentioned, the ARRL Handbook should have all the details on supporting circuitry.

A spectrum analyzer is an excellent instrument for displaying the harmonic content of a transmitter, for "sniffing" out RF leakage, and can show the quality of modulation of SSB, AM, FM, or PM...even OOK CW with slow sweep speeds and sharp IF filtering.

Such an instrument could be designed and built as a club project, made available for club members' use. It doesn't have to be an integral part of any individual radio amateur's equipment. It is a good receiving tool if used as an indicator of received signals a la the old "Panadapter." Icom has made receivers with an auxilliary 1st IF output specifically for an external spectrum analyzer connection.

In article <3A6D31C5.D8F4C50F@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>For Pete's sake, Len. You've been babbling here for years and many
>might like to dissuade you, it hasn't yet worked.

Quite true and not just for "Pete's sake."

>No one can bar you
>from expressing your opinions even if we don't share them or like them.
>I, for one, reserve the right to call you a fat head if I disagree with
>your views.

You have done more than that, especially when not receiving
any praise over the "clever" use of CW as an order-wire for
a State Department FSK TTY circuit. :-)

>That's the other side of free speech. Being able to tell
>you that I think you bring little to the table is MY right.

Si, el Jefe. What you say is all right. What others say is
all wrong unless it coincides with your light right.

So...all readers can now expect name-calling to be a
"tradition" in this newsgroup now that you are retired from
government service?

>Where is it mandated that I must be any more "politically correct" in
>putting forth my disagreement with something you might have written?

Nobody is mandating Dave Heil. He is El Jefe and will call
anyone a "fat head" if he feels like it. :-)

>Political correctness is another way of dancing around what one really
>means. Folks are worried today about damaging the self esteem of
>another. I'm not worried about your self esteem, Len.

I am not worried about my self esteem, El Jefe.

I think El Jefe is worried about his self-image.

>I would be most
>interested in hearing you explain how the amateur radio service is doing
>anything close to illegality or against the principles espoused in the
>U.S. Constitution in disageeing with the views of Leonard Anderson.

No you would not. You say the above to troll for another bout
of Heilian ascerbicity to get even with another who did not
please you in a newsgroup exchange.

>Wrap yourself in the flag and get up on that soapbox, Len. Strike a
>pose while I snap a photo. I'm sure that Ed can arrange to have it

>appear in an upcoming issue of QST.

How will that resolve anything, El Jefe? Why would QST bother
with any photo of a non-amateur? QST is a membership
magazine of the ARRL, isn't it?

>> Just an observation from someone who believes in and
>> once took a serious oath to defend the United States
>> Constitution with his life if needs be.
>
>Oh my...

Ah, so an expression of patriotism for the USA is suddenly
passe'? Strange coming from a former employee of the US
government. It was the United States government, wasn't it?

To who (or whom) is El Jefe's allegiance owed?

>US regulations at this time?

Is it?

>It will be at least 4 years away before the FCC
>would even consider a change, looking at the timing of the WRC and
>estimating the amount of time it will take to ratify the treaty.

The US Congress mandated the FCC to perform biennial reviews of regulations. "Biennial" is defined as every two years, not four.

I thought ITU-R standards are voted and adopted, not "ratified." The "treaty" is a statement that the USA is a member of the ITU and supports it, not the individual standards for any particular radio service.

>I think
>that it is premature to set a policy now on a matter that cannot be changed
>now and that can be decided better when something specific can be put on the
>plate.

I thought that any sort of "policy" affects the future. The decision could have just as easily been made to read that it (the BoD) supports that the FCC should begin changing the code test requirement as soon as S25.5 is deleted or amended to void the code test for a below-30-MHz-privilege amateur radio license.

>A lot can change in the membership, in Amateur Radio and in the
>makeup of the Board in the intervening 4 years.

Yes, a meteor can fall or aliens invade the earth...

>It is, IMHO, up to a
>future Board to change or affirm its policy wrt US regulations when it
>appears that it is time to act. The present policy simply does not change
>the status quo wrt the ARRL policy on US requirements. Considering that no
>change in policy can effect any change in US regulations, I think the Board
>made a reasonable choice.

I see the BoD as thinking more of its and the ARRL's future insofar as membership numbers. Hard-line PCTAs are more likely found in ARRL membership than outside. That's as it should be since the ARRL need only be concerned about its membership.

>The Board dealt with the international treaty now because now is when the
>decisions need to be made.

Disagree. The time to act, to show the leadership and vision stated by Hans Brakob, should have come at least two years earlier. Stating that time-now was "the time to act" looks more like a rubber-stamp approval of whatever the BoD does.

The issue of eliminating the code test requirement in S25.5 surfaced in earnest about four years ago, did not happen overnight. As far back as 1990 the FCC said (in the R&O establishing the Technician class license) that a code test does not fit with their requirements as to licensing. The time to act was before this weekend.

Stubborness (perhaps lethargy) in seeing the future laid out before them is not an endearing quality of the ARRL leadership. Such may comfort the membership but does nothing to bring in new memberships (and dues monies) from the over 3/4s of all US licensees that are not now members of the ARRL.

>IMHO, of course.

Of course...and IMHO too.

Very few hams have fingerprinting equipment, too.

I think the spectrum analyzer would be the more valuable of the two.

You are correct; it is relatively easy to build and use a spectrum analyzer, although the inexpensive ones often do not have a lot of dynamic range.

Two good sources of info are:

http://www.arrl.org/tis/info/pdf/9808035.pdf - Part 1- a spectrum analyzer construction project
http://www.arrl.org/tis/info/pdf/9809037.pdf - Part 2
http://www.science-workshop.com/Joe_Carr%27s_NV_article.htm - Poor man's spectrum analyzer

A tutorial on spectrum analyzers is found at:

http://www.science-workshop.com/

> A spectrum analyzer is an excellent instrument for

Not at all, but it will take me 2-3 days to put together the info just on VDSL, Home Networking and a few of the other immediate threats. ARRL should put together more stuff like:

http://www.arrl.org/tis/info/rfiteljx.html

> Dump the lab, turn it over to somebody else and get outta there. Your RFI
> activities while being of a technical nature are much more political, consensus
> building and educational pursuits which have nothing to do with lab tests of the
> latest whizzy xcvrs.

You are quite correct; RFI and equipment testing are two different beasts. Mike Tracy does our equipment testing. Problem has been, up until this past weekend, that I have been doing individual member contact on RFI problems, working with utilities, manufacturers and the like on individual RFI problems, contact with industry groups (VDSL, HomePlug, Home Phone Networking Alliance, to name the recent ones), assigned tasks to help prepare our comments to the FCC on various regulatory issues, participation on 4 different industry standards committees, plus a few ARRL Board-level committees as staff liaison or as a member. And, of course, the occasional

2-3 day writing assignment for articles and the day-to-day supervision of the guy who does the testing, the guy who puts up the TIS pages and, of course, Zack, our Lab "generalist." You are correct; all of this cannot be done justice by one person; some of those areas are seeing a growing backlog. I am not saying this to brag, but in support of your view that a full-time effort toward just the RFI component is needed.

> Considering your background and the ogre content of the exponential escalation of the number
> of Part 15 devices (among other threats) SOMEBODY gotta put full time into it.

Yes, indeed; I expect to see the Help Wanted ad for the several new HQ positions that will be created as a result of the last Board meeting hit QST for the March issue, and it the ARRL Web page, probably tomorrow. Check http://www.arrl.org/announce/jobs/ over the coming couple of days to see the general scope of the position. I may continue to do some of the industry committee liaison work because it is going well, but I definately want to see a full-time effort go into addressing the growing problem of RFI to hams. That will also let me work some on some of the R&D and noise studies that I have been hoping to find some time to do, and to occasionally work a 40 hour week. :-)

As you point out, Len, the ARRL Board does not (and IMHO should not) decide the US licensing regulations. The FCC has sole regulatory authority over the Amateur Radio Service. The ARRL Board determines only ARRL policy. And among the things the Board has decided is good for the Amateur Community are the very things you say should be worth $50 a year. Actually, considering that they are funded by a combination of dues, advertising revenues and pub sales, plus a smattering of donations, they probably are worth just about what you cite. :-)

Old as the hills, had a Heathkit version (HO-10?) in the early 60s fed by my 75A4. Been there, done 'em, trust me, they're useless panel clutter for real-world ham listening ops. Decent modulation checkers but that was about the extent of their usefulness.

Not me. I gathered that Larry was referring to the possibility that
somehow the government had become so tyranical, in violation of the
Constitition, that someone concluded that armed rebellion was again in
order. I can't imagine that, but I suppose it can't be completely ruled
out.
Sometimes you wonder how far some of them can incrementalize things
without going over the line.

Ed, NCI only represents person who support an end to Morse code exam requirement; whereas the ARRL represent a much large number of licensees that are about evenly divided on the matter. When the ARRL Board takes a position on this matter, irregardless of the position, it going against the interest of about half of its members. The ARRL Board would have acted more responsible by presenting both side of the matter, and telling members to file their own comments with the FCC. In stead it chose side against a large number of its members and further dividing the community.

It was ARRL that was a major influence in getting S25.5 adopted by ITU and in convincing the FCC that the amateur radio community wanted continued Morse code examinations.

The ARRL Board should have told the procoder to go argue their own case, and not waste member funds on a matter that was not in conformity with law.

I think a smart test taker will use the easiest method for each part
of the test. Memorizing formulas and working out the answers is
probably the easiest. And memorizing the questions and answers for
complex technical questions is probably the easiest...

Professional ham engineers excepted...   :-)

Using the total US population for comparison might make us look better technically as a group simply because of the large growth of ham radio compared to the total population. There probably would be more of everything, from technical hams to liddy hams. But if you wanted to compare the average amount of technical hams in 1960 to the average amount of technical hams in 2000, it would have to be referenced as a percentage of total hams (for each time period) to reach any kind of valid comparison. I don't know how you would ever do that (for many reasons), but I have a definite opinion on what the answer would be...

Perhaps the rate increase does seem large. However in comparison to my hospitalization insurance which went up $200 a *month* or my property taxes which went up $2000 a year (my fault for moving to a nicer place), a $5 increase just didn't strike me as being all that

Try plainspokenly. Why can't you folks at Newington just state the facts in plain language?

misinterpret simple,
> direct statements and then use their misinterpretation as "evidence" of
> unethical behavior on the part of the other party.

So you assert that you folks at Newington never "spin" things to make them appear just a little better than they actually are? You say that the increase is only 3 percent per annum, gee, that isn't much. But the simple fact is that it amounts to a 14.7 percent increase each and every year, henceforth. If you had said it in plain terms your statement would have made note of that.
Intended or not-and I fully accept that it was not-, your statement was ambiguous to anyone not current on accounting terms.

> Guess my stomach for

That is what I felt the meaning of "at this time" means.

> The US Congress mandated the FCC to perform biennial reviews
> of regulations. "Biennial" is defined as every two years, not four.

I will gladly put a lobster dinner wager on whether the FCC revisits the
Morse code testing as part of its next biennial review. I would go for
dessert that they don't even make major changes the next time around.

> I thought ITU-R standards are voted and adopted, not "ratified."

I may be wrong, and will defer to those who know, but after the ITU adopts
the standard, does it require ratification by Congress in any form? Larry?
Phil?

> I thought that any sort of "policy" affects the future. The decision

It could have been made. I don't think that it could have been made
"easily" considering the strong differences of opinion amongst ARRL members.

> >A lot can change in the membership, in Amateur Radio and in the
> >makeup of the Board in the intervening 4 years.

> Yes, a meteor can fall or aliens invade the earth...

My views have gone through some evolution over the past 4 years. Every single Director who serves on the Board now will be facing an election cycle over the next 3 years.

And as to the meteor, as compared to 1997, ARRL has a new President; two of the three Vice Presidents are new; the International Affairs Vice President is new and 9 of the 15 Director slots are filled by different people than held the job in January 1997.

> I see the BoD as thinking more of its and the ARRL's future

Do you believe that ARRL's concerns about the overall health and well being of the Amateur Radio Service are not int the best interests of its membership? I also think that the overall health and well being of the Amateur Radio Service are what is good for the ARRL.

I agree; in my personal opinion, two years ago would have been better. Would the Board have reached the same decision two years ago? Did it?

Precisely the problem. If you don't make it clear what your point is- and the use of "3 percent per annum" with no further clarification won't work much of the time- and when it is clear that it's gonna cost 14.7% additional each year to subscribe, well, I think you can see the problem. Not everyone thinks in accountingese. I'd venture that most people don't.

Did you not know that the last dues increase was in 1997?

Was the information that the standard dues rate was going from $34 to $39
somehow mislead you. Was its point not clear?

The term 3% per annum means 3% per year. A statement that the dues rate did
not exceed the inflation rate because is has increased at 3% per year since
the last dues increase in 1997 is not "accontingese," Dick; those concepts
were taught to me in junior high school.

When the restructuring occured, ARRL presented its reasons for its decisions
to its membership, then encouraged members to file their own comments with
the FCC.

I provided a good example for the formula-based questions; can you supply a good example for the complex technical questions that are best memorized without understanding?

I do agree that a few questions fall into that category. When I answered the question about parasitic oscillations in 1964, I didn't have a clue what one was. Amateur Radio surviced and I think that giving me a ticket worked out okay for the Amateur Radio Service. In my own small way, I have made contributions.

No, actually it went up on suddenly July 1, 2001 to $39 per year which
was a 14.7 % yearly increase.
Ah, semantics.

Ed, it's hard not to bump in to CW on the air. I don't see why retaining a CW test element would expose one to any more CW than what they are likely to experience on the air operating. Opportunities to learn CW are there for the asking, tapes at Radio Shack, CW programs for the computer free on the Internet, CW practice sessions on the local repeater, and so on, so I fall to see how a CW test element can "improve" the "opportunities" much.

If a Ham likes CW they will learn it on their own, and will work at it to improve their proficiency. For those who don't, even force feeding CW can't stop them from spitting it out once the spoon is removed so to speak. It's really a case if you like it you use, you don't you won't.

>He wasn't impressed, and nothing changed. The "members only" side is
>still lame.

Do you think the ability to download all of the Product Reviews since 1/1/1980 is "lame?" Do you think the Lab's Expanded Test Reports, up to 40 pages of additional data, charts and graphs from the Lab tests of rigs is lame? How about the parts of QST that are downloaded as soon as the magazine goes to the printer. What about the email-forwarding service? The QST/QEX seach engine that the ARRL Lab categorized back to 1970, with additional selected categorization back to the 40s and 50s? (The article Mid-Michigan Skyhook now comes up if you type in tower as the search word). DXCC awards listings if you are a DXer; a discussion forum about the Doctor column; a discussion forum that is the first step in determining what members want to see in the ARRL Educational and Certification courses.

I think, Hans, that your use of the term "lame" was not accurate. I am personally not very interested in many of the members-only features either, but the pages do have things of value to me.

There are three kinds of hams out here: Those who strongly support code testing,
those who strongly oppose code testing, and those "middle people" who could care
less one way or the other. So the Directors won't hear from those. The next brawl
will be "The Second Battle of the Rabid Partisans". Like the Second Battle of Bull
Run. With the emphasis on "bull".
>
I've been noticing much more widespread interest in the topic recently than we had
while 143 was cooking. For one our Director actively pursued opinions on the
matter going into the recent BoD meeting this time which he has not done
previously. Yeah, it's still a hot topic. It ain't gonna be over until the FCC
finally closes the matter for many years whenever that might happen some
indeterminate number of years out. I wouldn't bet a dime on any of it.

>> We are then going to take them to the FCC. IF the FCC will enforce the
>> no-interference clause, then it can be relied upon. If not, then we cannot
>> live with the limits.

>If it's well documented, etc. I would expect Riley would move on it.

Actually, it may be better to take it to the Part 15 folks, but your point is taken. I am not so confident. What will the FCC do with the neighbor of a ham who buys a touch lamp at the local K Mart and causes interference.
I chose that example on purpose because in one very clear cut case, the FCC paid a visit on the neighbor after months of the ham begging. The FCC told the neighbor that he had to stop using the light, shook everyone's hand and then drove away. The van no sooner was out of sight than the noise returned. So far, no further action. That's one of the cases I need and I am going to use

it. Another case involves a commercial wireless LAN on 2.4 GHz. The operator actually did the right thing and turned off channels -- until they realized it was the Amateur Radio Service. Jim Haynie is still working with the FCC on that one. That's two, but I can't promise how the cases will turn out. OTOH, the FCC has been good about writing advisory letters to electric utilities, as a followup to the letters I write first. (I hear from about 75% or so, with generally good cooperation, although 50-50 on the actual resolution.)

But how does a ham and the FCC tell the neighbor of a ham that the device he just bought at K Mart is being operated in violation of federal law?

> ... the FCC can readily spank an owner of an RFI source but
>there are two perps involved. One being the owner who refuses to go
> QRT which the FCC can shut down, the other is the manufacturer of
> the widget who probably sold a jillion >of the things.

Actually, there is only one perp under the law in most cases. The manufacturer is required to build the devices to the requirements of Part 15. Some devices must be Certificated -- the manufacturer or importer has to send test data to the FCC and the Commission approves the device for sale in the US. Others are "Verified," meaning the rules require the manufacturer to test it and keep test data if the FCC ever asks. (Really!)

Once those requirements are met by the manufacturer, the device can be sold. A "legal" device on 3.5 MHz can cause S9+15 dB to a dipole located 100 feet away. This is, of course, harmful interference if it lands on a frequency an amateur is using.

Even that may not be so clear cut. The definition of harmful interference requires that communication be repeatedly disrupted. The FCC has made decisions wrt cable leakage that merely hearing the signal (S9 is typically legal for a cable leak) break squelch is not harmful interference. 145.25 the usual frequency, and if there is no repeater in the area, there is no harmful interference.

In my estimation, more instinct than fact, the FCC would not view an S1 or S2 signal on HF as harmful interference. S6+ almost certainly is. I don't have a clue how the FCC would view things in the middle. How about a signal that is a 1-second burst every few minutes? Harmful interference? How about the frequency agility that is a natural part of the Amateur Radio Service? Would the FCC feel we should use the flexibility they have given us to avoid interference that is on a single frequency? I don't know, but I could imagine that they would.

The real issue, however, is that under the rules, the operator of the device, ie, your neighbor, that local business, a school, is responsible for resolving actual interference. I don't know about you, but I sure would not want to have that conversation with my neighbor. He bought an arc welder at Sears and I gotta' tell him he is using in violation of federal law? He is a nice enough fellow under most circumstances, but don't think he would see things my way. Now what? A letter from the FCC? There goes my next tower variance, eh? And what do I say if he says, "So, the tables have turned, have they?"

> Gets very complex but it's absolutely gotta be done.

Complex, indeed. That is why Mark Wilson tolerates me in the Lab. :-)

> I vote for getting the limits for Class B devices 'way down, kill it
> before it shows up on the shelves and be done with it.

The ARRL fought that fight, and lost. I guess the big boys had more expensive lawyers. Realistically, unless we can show serious and repeated harm to the Amateur Radio Service, I don't think we have a prayer, and even then, I think we would lose. And, what the manufacturers say is that the rules offer complete protection against harmful interference; how much more protection do we want than absolute?

I can live with this,IF the FCC is willing to enforce the rules. I can live with ARRL having to take a lot of the first steps, in preparing information and in trying to resolve some of these problems with the device operators, IF the FCC is willing to take the last steps and deal with those cases where a reasonable cooperative effort is not enough. How that works remains to be seen, but if the FCC won't do it, I think ARRL's comemnts to the FCC may be very different the next time a high-level of radiated emissions is proposed as being okay because of the non-interference rules.

In the meantime, what can be done? Even with what it has for staff resources (me,part time on RFI), quite a lot. It all started with the old Phonex PX-421 wireles modem jacks on 3.53 MHz. Man, I can hardly tell you how much time I have into that one. It took over two years, but it is actually starting to pay off. Phonex did the right thing immediately, learning of widespread harmful interference and literally stopping production and making engineering changes in a few weeks. About a month later, a new model was in production, operating outside the ham bands. TCI, now AT&T, bought them by the thousands. That was the hard part. They were very cooperative on the national level, but had a lot of local problems getting the job done. After a long while, they switched over to a 100%-recall mode, and are, in MOST sytems, 90% done. (The areas that are still behind the curve are San Francisco/San Jose and the Dallas area, but Dallas is coming up to speed pretty fast.) Whew!

Unfortunately, and fortunately, that isn't it. Other technologies such as VDSL, HPNA, and HomePlug threaten HF. Fortunately, that isn't it. I somehow managed to put togehter the web pages at http://www.arrl.org/tis/info/rfiteljx.html. This is, of course, seen by a lot of hams (not all of which are members... :-)). Many hams work in industry, so this info got the attention of those organizations. In many cases, work to protect amateur radio was already underway, I might add. The bottom line is that these organization are willing to address RFI from the getgo, and are doing so, to one degree or another. All 3 product specs contain at least 20 dB more protection for amateur radio than the rules require, with the very specific intent of preventing inteference to large numbers of hams.

Will there be cases anyway? Yes, there will, just like there are cases of TVI involving ham radio. But these manufacturers are voluntarily including protection, and they are going to radiate about 60 dB less energy in our ham bands than the rules permit us to radiate in our neighbors' TV bands.

Now, the real problem is probabliy 2.4 and 5.6 GHz. Can you say Bluetooth and wireless digital? There can be no protection added because these devices are using the shared ISM bands that we also share. The manufacturers know, too, that our use of the 2.4 GHz bands is a lot less than our use of HF, so the likelihood of *actual* harmful interference is pretty small. The ARRL's ad hoc Spectrum Strategy Committee is discussing just what CAN be done to help protect these bands. Asking for Part 15 rules changes may be one of the end results. The committee has been in place about 4 months or so, and just reported to the ARRL Board in January. As a "spectrum-strategy," the full report may not be made public -- no sense telling the opposition how we intend to defend the bands, but I will sed what I can shake loose for a public report.

>> . . . I did not write up or publish the papers I presented to the T1E1.4
>> VDSL standards committee, nor describe much about the work

>Lack of time?

Lack of time, on the the next emergency. That has to change, and I told my boss that. :-)

>I agree. Gets right back to the concept of monthly staff reports in QST.
>Provide a brief summary per department or noteworthy invidual's news
> in QST povide the the link to the full text stored in the Web server.

Even it only appeared on the web, it would be a start. Once I get my new staffer hired, and up to speed, I am going to have to get things documented. (Man, I hope I can find the right RFI guru in a tight employee market and a salary range that is not at IEEE standards. The saving grace is that this is a once-in-a-lifetime opportunity to work with ARRL, industry and the FCC to make a BIG difference in something really important. I will either get the semi-retired EMC engineer or the new grad who wants something REALLY impressive on his or her resume.)

>A manger playing help desk is nuts.

I am a working supervisor, so I gotta' do something. :-) What I may continue doing myself, depending on the qualifications of whoever I hire, is the committee-level and some of the first-contact with industry and utility companies,etc. It has been working out pretty well.

>I'm a lot more concerned about losing spectrum space to interefernce than I
>am to
>somebody nipping pieces of spectrum space for use by other services.

ALL amateur spectrum is shared, most of it with Part 15. That sharing can protect us as well as hurt us; even the Part 15 folks are afraid of congestion on 2.4 GHz. Time will tell what can be done, but I, for one, am going to give it a go.

Anyway, I probably gave you (all) more of an answer than you wanted. To find out how many read this far, send me an email to W1RFI@arrl.org or

W1RFI@aol.com. I will do a drawing of all those that do to award the 2000 "bent-cover" Handbook, now that I offered it to Aaron but he didn't accept the terms. I will add that you have to look REAL close to see the bent cover. But I did want to give a snapshot of what I have been up to over the past few months. The details are, well, a bit more detailed. :-) I figure that it is the least I can do after disagreeing with you so often on code testing. :-)

Not only "small boats". Every vessel required by law to carry radio (all cargo vessels over 300 tons, all passenger-carrying vessels) must carry an EPIRB. IIRC all aircraft licensed by the FAA must carry an ELT (I may be wrong about the "all" but certainly "large" aircraft are required to have ELTs).

>Goodies like these would seem to make the radioman obsolete, but maybe

  Replacing the old "Gibson Girl" or equivalent hand-cranked CW
  transceiver, all lifeboats are required to carry two or more
  battery-operated marine VHF transceivers to talk to the SAR
  aircraft who are usually first on the scene.

  BTW - the American Red Cross uses SATCOM radio-telephones as
  its backbone communication in disaster services.

You are probably correct, but I also see no reason to completely eliminate
testing for one popular mode on the tests. The method I described does indeed
test CW, but to the same standard as other modes.

At any rate, this is the gist of what I believe today. Who knows what I will
feel a few years hence.

Why? Most of the comments made to the FCC are by people seeking personal gain
from the result. The FCC accepts that. Even if there is personal gain involved,
and there almost always is, the FCC knows that it must make its decisions in
the public interest.  In general, I think they do.

><Vince> apparently has a beef with ARRL.

I believe the majority of his current disagreement is that he is not pleased with ARRL's position wrt restructuring (4 classes of license, 0, 5,12,12 wpm, and asking that more comprehensive written exams be given.)

>As for benefits to becoming a life member, kinda depends on your motives
>and your age.

I think I can address what may have been the original question. Life members do not receive benefits that are any better or different than annual-paying members. It can be an investment in the future for some, a way of not having to bother renewing every year for others and a "contribution" to ARRL by others. The League does invest the life-member dues, to ensure that it is not building a house of cards. That life-member who joined for $125 back when $125 was a lot of money is still being funded from the way that investment has grown.

Do the math, consider your options and if you want to join the League, do it in the way that is best for you.

See http://www.arrl.org/join.html for info on dues and life membership.

Are saying that person petitioning his government to change a regulation
that he believes is not in conformity with law and not in the public
interest has no standing to file that petition?

The matter more or less before the Commission is complaint against the
political, legal and constitutional validity of a the Morse code exam
regulation. An attack against the petitioner is irrelevant.

Would you ask black women to be white before she challenges the a bus
seating law. Would ask a women to be man before she challenges the right to
vote. Must I pass a code test in order challenge the ITU rule S25.5 and FCC
rule 47 CFR 97.503(a)?

Not exactly, Jon. 'Per Annum' is Latin for "Each Year". You didn't
exactly specify in clear terms which years you were referring to, so I
made the assumtion that *future years* was the subject, since the future
is the only time where the increase can apply - you're sure not going to

collect arrears from the membership.
 Turns out that wasn't what you were talking about, instead you were
doing past-years' accounting. Until you made that clear it looked
appeared to be a screening of the dues increase as a percentage, the
sort of spin that is an everyday matter in society today, lamentable
though it is. It's a routine business matter today. So it wasn't exactly
my "ignorance" that was wholly to blame for the clash. Once your meaning
was clear, my complaint dissipated. Let's just leave it at that.

Here's two:

1) Apathy. Many amateurs don't care about some other aspect of the service if it doesn't affect them.

2) Anarchy. Everyone simply does their own thing without regard to others. For this, I'm primarily thinking of the breakdown of the packet network (at least regionally), where cooperation is necessary but lacking. We're left with just a few "die-hards" (often called "blow-hards" by those who aren't in the network), who are aware that they're unappreciated and by themselves, cannot sustain an already fractured network. It gets worse with TCP/IP ops. However, with some of the jamming on HF, this could be a factor with voice ops too.

These two certainly lead to alot of corrolary problems such as in-fighting, the insult wars here on the RRA newsgroups, etc....

I certainly agree. The League's restructuring proposal was very much appropriate and would have affected an orderly progression of the ARS. FCC evidently didn't give it more than a cursory look.
I don;t know exactly when things changed, but it had have something to do with retirements and massive personnel changes. Both ARRL and FCC are operating with totally different personnel than in the dasy when they collaborated closely in planning and making rules for the orderly administration of the ARS. I doubt we'll ever again see such close cooperation again. FCC has bigger fish to fry and ARS is a very small blip on a very large screen.

Do you mean the FCC that has a chairman who doesn't believe
that the FCC has any business doing what it 'sposed to do

(setting standards and regulating communications providers) and
another commissioner who doesn't have a clue as to what the job
of the FCC is anyway...thanks be that we finally lost the
California moonchild, she was even worse...but who knows
who/what Prez Dubya will select to fill the new vacancy.

These folks will be "in the seats" when WRC-2003 business and
its aftermath has to be dealt with.

Bring Back George Sterling (the last ham and the last engineer
who served as Commissioner).

Now that you've asked, he might have said something like "While the
increase is 14.7% per year, it actually amounts to 3.5 % per annum since
the last increase, which is not out of line with the rate of inflation".

Sometimes economy of words winds up costing many more. (Something I
soon found when attempting to shorten my own posts).

>of Jon's paragraph because you thought it irrelevant to the discussion at hand?

Fair question. Lets analyze. Here's Jon's *entire* quote:

>>It's not an insult. Dick admitted he was ignorant of the meaning of the term
>> "per annum." Hey, I'm ignorant of lots of things. So are you (shocking!)

Have you seen Dick post that he admitted that he was ignorant of
anything? Have you seen me post that I was ignorant of anything?
"Ignorant" is not the nicest word you can use when describing someone,
even when using the word on yourself...

Of course Jon was referring to his earlier statement:
>>This is one of the reasons I don't hang around rrap much any more -- too
>>many people like Dick who (willfully? ignorantly?) misinterpret simple,
>>direct statements and then use their misinterpretation as "evidence" of
>>unethical behavior on the part of the other party. Guess my stomach for
>>idiocy like this isn't as strong as Ed's.

Translation: Dick (wilfully? ignorantly?) misinterprets my posts which
is idiocy. Idiocy? Would you like to hear that your posts are idiocy,
meaning of course you write like an idiot...

So Jon has effectively posted: Dick = idiot = ignorant and Cecil =
liar, all over a silly percentage argument... :-)

You may be right in your criticism of my quoting, but all in all, I
think I had Jon's flavor rather well. Question is, why do you take me
to task for my quoting, and yet remain silent on Jon's conduct? You're
not going to pardon your brother (employee) are you Mr. Clinton... :-)

You're a bit odd Ed. Most people *are not* happy at all when they get
their mortgage rates raised...   :-)

And that apparently goes for some ARRL members with dues increases
too. Unless of course they aren't good on figuring percentages... :-)

Ed...
I would love to belive that ham radio is continuing to grow... BUT
common sense tells me it is not capturing the interest of young people and it is no longer advised as a worthy educational hobby by their teachers or parents. We can not ignore the facts that show that ham radio has become an old foggies' hobby, because only old retireees are interested in using its facilities. Communicating by ham radio in the way that the majority of hams (but certainly not all hams) are doing it is not very educational...Nor do hams attribute appreciably to the state of the communications art when compared to computer guru hobbyists.

Ham Radio is sick and will get sicker unless its basis and purpose is clarified and adhered to.

Because some public schools in the USA are not producing educated students it has become a political objective to improve education in general. Programs are being prepared that would test students' achievements and teachers' abilities to teach. Bush warns that schools which do not succeed will be closed. Programs involving school vouchers, so that parents may select "better" schools may be impossible to implement because either the voucher money offered will not be enough or the good schools will quickly be filled and there will not be "good" resources for all. The separation of church and state, as interpreted froim our Constitution, had formerly prohibited federal aid to parocial schools. IMHO this is a good idea because any inclusing of religious teaching must be handled separately from all other teaching to allow for the religious freedom that our founding fathers knew was best for maintaining peace and dignity within our nation.

Why do I bring up the Educational Dilemmas that are now political footballs? I bring it up because it has a lot to do with ham radio.
Some present political beliefs include:-
1) All children must be given a good head start early in their education if a modern educational program is to succeed.
2) Children must be tested in all subjects at all levels to certify their abilities and to make schools accountable.
3) Americans need more required education in math and science if the USA is to remain competitive with other industrial nations.

Are we to believe these ideas???

I kind of agree with these needs and I think that our government is prepared to spend some bucks to achieve them. Why not apply them to HAM RADIO???
We could...
1) Restore a Novice License that would be at a level to motivate very young children to become hams.
2) Increase the number of Ham License Classes and corresponding exams bringing ham radio into the digital information age.
3) Add endorsements on Ham Licenses for those, who through self study and practical hands on work, can demonstrate on exams that they have learned applied math, science and technology and are an asset to the USA.

Nah...

You will not agree with me because you only think that the ARRL will get dues from affluent old foggies who could care less about the future reputation of the hobby. They will rarely be able to get their own grand children interested...but won't see that as a detriment to working a rare island or rag chewing about their ailments...or complaining about a few kilohertz that they lost in 1968 because they couldn't make Amateur Extra Class.

Please keep thinking Ed...I appreciate the fact that you are answering almost everyone who comments here...Please read what they are saying with care before you jump to respond. For Ham Radio to survive in the changing times of new technologies and challenges it must motivate youth and their teachers...with progressively rarer exception, it is not doing so!

73,
Bob ex 2ilp (I wonder wher the double-us went!)

Yep...
FCC Chairman Kennard has been replaced by the son of a general. I dunno if that will mean anything as far as Ham Radio goes. The political belief among present FCC leaders is that all of the public must be given as much access to all of the bandwidth that the spectrum and the information highway can provide. Should everyone have the right to be a ham??? Without taking any tests??? Should ham radio become Citizens' Multi-Band (CMB)??? What about content? Should hams be able to transmit music, talk shows, political debates, antique auctions, casino gambling, pornography? Why not:- The Internet does. The Internet dotcoms do these things with the idea of making a profit. Hams could volunteer to do them for nothing (as true amateurs). Maybe it would be OK only if the Hams were women, minorities, Native Americans or folks who can't speak English....because they need the education???...or a better way to get equally represented???
I dunno. Maybe I've been listening to and watching too many Congressional hearings.

So you would propose that a CW test element be of the same weight as say a selection of questions on Part 97 rules? And a failure to pass the CW element does not automatically disqualifies the applicant from passing the over all exam? That could satisfy many, I would think, on both sides of the issue. If that's your position I can see where it could be a reasonable compromise, at least it's an interesting idea to think about.

Kids don't want to hear about any number of Ham exam queations. Why
should they? They are constantly reminded that Radio Shack "...has the

answers"...about cell-phones...at least.

Restore the Novice class with a simple oral exam.
Let Novices work ten meter stateside sideband short skip (SSSS).
Increase the number of license classes and exams for advancing hams.

>

> Sure you sought praise. You thought it was a clever idea...of yours.

Now you may be providing some ammunition for Steve's claims regarding truthfulness. I never made the claim that it was my idea nor did I seek praise. I pointed to it to U.S. Government use of morse. You as much as called me a liar over the issue.

> You were indulging in relating a story of your expertise on
> a government radio circuit, knowing full well that few on an
> amateur radio newsgroup would have experience there
> (with exception of a few ex-USN-radio-ops of earlier times).

I made no such claim regarding my expertise. Do you know what a person who tells untruths is called?

> Technically, switching over to CW from FSK TTY should be
> possible but it is a most odd sort of thing to use as an
> order-wire (a command circuit for radio circuit purposes).

We didn't switch back and forth, Len. We used CW on one frequency and ran the TTY circuit on a different pair.

> You claimed the switchover was "necessary to synchronize"
> the TTY circuit. TTYs have always self-synchronized since
> the first Teletype Model 15s, whether on landline or radio
> circuits. A Model 28 is no different in that regard.

I stated that CW was used to arrange QSYs, openings and closings of the TTY circuit. It was also necessary to confirm crypto used if that is the "synchronization" to which you refer.

>
> On a following reply you stated that the "synchronizations"
> were to "set schedules." That was illogical since, if the TTY
> was operating correctly, it could be used as a TTY to send

Huh?

>
> > I did not come up with the
> >circuit. I simply used what was already in place. As I recall, you
> >tried telling me that what I stated was untrue.
>
> I said it was a dumb idea if you did it that way. I still think so.

It is obvious that you did not and do not understand what was stated.

> While technically possible if the TTY transmitter also had OOK
> CW capability, there were no technical justifications for this.
> You seemed to be trying to get an "upper hand" in an on-going
> argument in a newsgroup on the necessity to operate OOK CW

> and preserve morse code testing for an amateur license.

Different transmitters were used since one circuit used CW and the other
was the TTY circuit. My statement regarding government use of the CW
circuit was correct. No "upper hand" was needed nor sought.

> You are now welcome to state why that particular switch from
> TTY to CW was technically or opeationally necessary. For
> any reason. It doesn't really matter but it will be interesting to
> see the rationalizations and attempts to close with the last
> newsgroup word.   :-)

I'll leave it to you to figure out the necessity for such operation.
You were not a State Department communicator any more than you're a
radio amateur.

> didit

Yep, been there and didit.

Jim:

We're talking about rebellion against government tyranny. And just so you know, I believe we're about as far away from needing any such rebellion as we can get -- so there's no need to be nervous! However, a good way to judge whether or not such a modern-day rebellion is in order is to see whether the government starts making serious attacks against Constitutionally-guaranteed freedoms -- such as the right to freedom of speech, or the right to keep and bear arms. "Rebellion for rebellion's sake" is the last thing law-abiding gun owners have in mind, and I, for one, would be more likely to act to quash any such rebellion as to be a part of it. When American citizens have the right to keep and bear arms, that right, by itself, is a powerful check against any possibility of governmental tyranny -- the same way that states with liberal CCW licensing have experienced a major reduction in gun-related violent crime. When "they" start talking seriously about taking that right away, as they actually did in England, Australia, and other Third-World countries, then it's time to start seriously thinking about acting on such a "rebellion."
I'm sure President Bush isn't going to permit that to happen.
For the first time in eight years, I have renewed faith in my government.

Jim:

That's just the way liberals think. They must impose a rigidly-enforced double standard, because they believe themselves to be intellectually, morally, ethically, and socially superior than those over whom they rule. They are the true elite -- at least in their own minds.

So, the next time you see some Environmentalist telling you where you can't build a nuclear power plant, tell them to get back in their Volvo and go back to their gated residential community and play a round of golf -- because unless they are living in a cave, wearing a buckhide union suit, and have never pissed into porcelin, they can't tell you a damn thing!

Fred:

I'm not going to sit here and say that your helping this fellow learn
how to read through an interest in ham radio is a bad thing. I very
much admire the way you helped ham, and congratulate you both
for the result. I think, in my original reply, I somehow overlooked
the unique nature of this situation. If I therefore stuck my foot in
my mouth, I once again spit it out. Patooooie!

It is not black; it is painted a sort of red-rust brown. That works our really well. :-)

Yes, I do remember the lobster dinner. We can either wait until I am in Delaware, or we can go to Tinker's Seafood in West Hartford, CT. I don't recall, was it "loser drives" like my bet with Carl? I had to go to Allentown. :-)

The public already has access to all amateur frequencies. They can do so at high power, by passing the exams, or a low power, by using devices that meet the requirements of Part 15. All amateur spectrum is shared.

>From: Paul McCarron w1hzy@cybertours.com

>I have been a life member since it's inception, some 30+?? years ago. They
>sure lost money on me!!!

Not so, Paul, ARRL maintains an investment folio that is funded, in part, by the Life Membership dues it has taken in over the decades. While I am not at all sure of the exact relationship between the folio and LM dues, it is pretty clear that without those prepaid memberships, the money would not be there. The proceeds for the investments serve both to keep the investments growing to match or exceed inflation and as part of the annual operating costs of the League.

When you shelled out those beans so many years ago, that was a chunk of change, indeed. You could have invested it yourself and used the proceeds to pay your annual dues, just like ARRL is doing. In that sense, you have indeed paid and shouldn't see yourself as a money loser at all.

If the League were to spend LM investments in the year they are received, it would make the budgeting process a bit easier, but they would be building a house of cards that would soon tumble down. They have been fiscally responsible with Life Memberships, IMHO.

>So you would propose that a CW test element be of the same weight as say a
>selection of questions on Part 97 rules? And a failure to pass the CW
>element does not automatically disqualifies the applicant from passing the
>over all exam?

That idea, to my knowledge, was first proposed by Bill Sohl. He wrote a Correspondence piece for QST that the editor published, perhaps in 1997 or 1998 (Bill?) I agree with it as an excellent way to retain testing for a popular mode, but in a way that balances Morse more fairly against other operating modes and practices.

Right now, one can get all of the questions wrong on any other mode, even get all of the band-edge questions wrong or all of the safety questions wrong, and still be given a license. Learning Morse code to 5 wpm is not all that hard, and some applicants will see it as an easy way to get a few questions right.

>That could satisfy many, I would think, on both sides of the
>issue.

I think so. IMHO, the complete loss of Morse-code testing would be as inappropriate as the complete loss of questions about FM operation. The nature of Morse code is such that it really is not appropriate to ask questions like:

What is the optimum rise and fall times of a properly shaped OOK CW Morse signal at 20 wpm?

I think that many of the no-code-test folks object more to the pass/fail nature of the Morse tests than to the presence of Morse code on the exams. On the other side, I think that many of the pro-code-test folks believe that Morse is needed to address some of the deficiencies in the present exams (real and imagined, IMHO). Looking at it from these perspectives, I think we MAY have some common ground. Compromise exists because it has value to society; maybe we can all decide that reaching a compromise position is more valuable to us than being "right" in the never-ending debate.

If I read the handwriting on the wall (for what that is worth), I think that the no-code-test side could ulitmately prevail if it stands firm. But in doing so, without compromise, the rift between us will be made a bit wider and that would spiritually disenfranchise a significant segment of amateur radio from its bretheren and sisteren. I don't know what the price of that, but the only example I can see is the rift that grew after incentive licensing removed priveleges from people -- the hurt and anger continues to this day. IMHO, any compromise that is reached, both organizationally and in the hearts of those who are willing to set at the "negotiating table," will let us make changes in a way that minimizes any harm to amateur radio.

And don't fool yourself, there is harm to us all in all of this bickering. Fortunately, the harm is not nearly as bad as a shapshot of this highly polarized forum is. Most hams don't feel nearly as strongly as some folks here do.

The real trick will be "organizationally." I am trying in my mind to imagine ARRL, FISTS and NCI setting at the table, burying the hatchet not in each other. :-)

Before April 15, 200 a person could become an Extra and miss
every question on Part 97 rules except two question on the Novice test.

Apparent the rules were not as important a manual Morse code proficiency.

The electric utility responses to QRN gripes have been as close as we'll probably
ever get to ideal ever since I can remember. Going back to when granny bitched
about noise screwing up the Arthur Godfrey Breakfast Hour on WPEN 950 AM. on yer
dial. The utilites have legal departments which dictate corporate policy as it
relates to compliance with all regs in minute detail. Plus of course QRN in a
neighbohood is often a useful tipoff to a failing connection or xfmr or whatever
which is a big incentive for them to get into it before somebody's lights go out
and more damage is done. None of it involves any altruism.
>

<
. . uuuh . . I think the definition of "harmful interference" is interfernce with
emergency services comms, aviation, etc. We suffer plain "interference" which is a
much lesser regulatory sin?
>

>
> Even that may not be so clear cut. The definition of harmful interference

>
Might be interesting to dredge up the and check the EU technical requirements in
this area as an example of tighter limits being just as viable on the market as
the
stuff we have here. The EU has consistently clamped down harder on the technical
requirements in any number of cases than the EPA, NEC and FCC do here.

>

> In my estimation, more instinct than fact, the FCC would not view an S1 or S2

> what do I say if he says, "So, the tables have turned, have they?"

>
He ain't gonna be welding all day all night, it's just part of ham radio going
back
to coherer detector days. It's the signals which are on the air continuously which
prevent the operation of a ham station which matter.
>

>
That's a big part of what the ARRL is all about. I can see this landing in the
courts given the way the FCC has backed away from ham radio. Nothin' like a
lawsuit
to get a bureaucrat's attention.
>

High accuracy isn't a critical need in most ham applications particularly when used as panadapters. Sorta like fish finders are lousy fathometers.

The utility in using a spectrum analyzer for ham receiving purposes is usually to detect the existence of a signal, not to accurately measure it's amplitude or frequency. Junk analyzers work fine in this kind of service, some being better than others. When I need to get serious about spectrum analyzers for machine vibration work I wheel out a $5-6k calibrated spectrum analyzer. Bruel & Kjar makes one which cost $25,000 a few years ago. There are spectrum analyzers and there are spectrum analyzers.
>

> the signals within sweepwidth settings are visible. 50 or 100

>
Understood, I've seen good spectrum analyzers (vs. HO-10s) used to present band displays. On HF they're close to useless because of the junk and noise on any open band for one. In a contest all you see is one monster 50-75Khz wide spike. Spectrum analyzers simply are not a useful enough operating aid to bother with. One of the high-end Icom xcvrs has a pretty decent built-in analyzer but nobody uses it on an ongoing basis. The proof of the pudding is that if spectrum analyzers had any particular value as a receiving aid the things would be on every operating desk. I don't know of a single big-gun HF weak signal wonk who uses a spectrum analyzer and I kow a bunch of those. Using one to scan low-population VHF and UHF bands might be another story.

Exactly,and precisely why the problem will NOT be solved at that
level, since FCC refused to require manufacturers of Part 15 devices to
spend the few extra pennies on filtering.
When the Pt 15 NPRM was in process I wrote both the FCC and my
congressperson to insist that more be done to reduce the RFI that was
sure to come as result of the way it was written. FCC ignored me and
quickly convinced my congressman that there really was "no problem" with
it. That was a done deal long ago and won't addressed again. Ed's work
is probably the only effective force in place at all, and it is largely
educational, as we can see from here. And much of that education is
pointed at manufacturing engineers who have no clue about ham radio, it
seems.
Whatta scheme.

For about the tenth time:

I have repeatedly condemned all jammers on the ham bands. Regardless of mode, frequency, test or license status.

The ones you keep obsessively focusing on are obviously a subset of those I have condemned.

What is it about "all" and "subset" that you don't understand?

Maybe there's no word for "logic" in Texan.

Not really. It's perhaps more of a credibility issue.

> seating law.

No, I wouldn't. So are you claiming that you are being discriminated
against because of your race, color, creed, gender, or disability,
Larry?

> Must I pass a code test in order challenge the ITU rule S25.5 and FCC
> rule 47 CFR 97.503(a)?

I never said anything of the kind. I was just pointing out that you
might increase your credibility by doing so.

When I first got online, I typed my messages in all capital letters. I guess I thought it was like being on RTTY. I was quickly told that I was being impolite (by shouting in net language). I'm glad that someone finally took the time to point out this social gaff to me. I don't remember his 'first personal' though...   :-)

Vince,that's what the current FCC believes. Why would the ARRL
deliberately -again- go against the wishes of the FCC? It never worked
before.

Dick

How do you arrive at that "recommendation," Jim?

Are you saying that everyone must go through the same
test ritual as you did just because you had to?

didit

I don't believe that Larry is going through all of the work of serving on the NCI Board because he feels that doing so is easier than learning the code.

CW is not used for anything other than an ID on the majority of radio services. Hey, that's a _good_ use of CW, though.

> >But, you miss the point -- you're not tested on
> >being able to _copy_ SSB, AM, or RTTY as you are with CW

Automatic CW 'modems' are also available -- you can then copy CW by simply reading. It just remains to make them more reliable due to poorly sent code. But, then again, poorly sent ASCII or Baudot would be the same.

> >(knowledge of
> >how the mode works, of which we are tested for the others, and knowing
> >how to copy the mode are two different things) -- you're tested on how
> >the mode works.

> AND on ability to "copy" it.

No one is tested on how to recognize RTTY by ear, now are they? Is difficult SSB copy presented (phase shifting and other ionospheric artifiacts can make copy difficult)? Nope.

In fact, someone who is deaf is able to get a license -- the capability of copying SSB is definitely not tested then. Whether they are able to transmit SSB (and, using computerized voice recognition software, perhaps, they can receive it) is not limited, even if they can't copy it.

> >CW is outdated.

> Why do you say that? Have you ever actually LISTENED to the HF ham bands?

The Amateur HF bands are a small minority of 'the great majority of radio services' listed above. Sure, hams use CW -- but hams also use outdated FM equipment on 2 meters, too, that no one else can use. The reason for amateurs' existence is spelled out in the rules -- which paragraph does CW Morse meet these days?

Yes, I have listened to the amateur HF bands. Do you take me for a newbie?

> > Almost as outdated as spark.

> Not at all. Do you know when spark disappeared from the ham bands, and why?

The why is due to occupied bandwidth. The when was a very long time ago (around 1924). The then new 'CW' method of sending code was much more efficient, both in power and in occupied spectrum.

But you did know that I placed that clause in there as a troll, right?
:-)

If persued on technical merits alone, CW would be dead now, due to modes such as PSK31 and MFSK16, which are more efficient and more capable than CW Morse (or Vail, if you want to go there) code.

But ham radio has never been only about technical merit.

> > -- protected subbands are good, though.

> Agreed! In fact, how about this: Divide each HF band into 3 subbands, by mode:
> Morse only, digital, analog voice/image. 35/15/50% is about right. To use the
> Morse-only subbands, you have to pass a Morse test and a written test. All else
> requires only a written test.

I would go a little larger on the digital -- reference the recent PSK31 interest. And with automatic CW 'modems' (such as the contest keyers many use), a test would really be superfluous -- but I wouldn't make it a sticky point. 30-20-50, maybe? Or 33-33-34, even?

> Something for everybody.

Right -- something for everybody. No one forced to learn a mode they won't use. Exactly my point.

Some of them might, not the one I used. About ten years ago I was recruited to
skipper a rented 37' sloop to take a four day tour of the northern Chesapeake at
the behest of a couple mahout type gents in my biz who are another generation up
and didn't want to go it on their own (Actually, one of their wives told Hisself
that there was no way he was gonna do any such stunt unless I was aboard. Pain in
the ass. Lucky me.). The boat had a fish finder and a fathometer in the cockpit,
they consistently disagreed about the depth by a bunch. To make a long story
short,
I got curious and actually dipsticked the bottom several times, the digital
fathometer was always right on the money, the fish finder was out to lunch every
time. In ten feet of plumbed water dockside at Annapolis the fish finder told me
we
had 16 feet and the fathometer told me the bottom was ten point something below
it's transducer. Mud time if ya navigate with a fish finder as far as I'm
concerned.
>
I'm normally a stinkboater, I don't fish and that was my only experience with the
things but it was enough.

I take a great deal of pride in my abilities at Morse code.

That pride is not diminished if some other fellow can't beep as fast as I can. I'll bet he has something different to be proud of, like maybe the size of that bass he caught last summer, or how well his daughter did in her soccer game last night, or how well he sang in the church choir last Sunday.

I do believe that The Constitution guarantees equal treatment under the law.
That's why we don't have segregated rest rooms any more. If tested in court,
I do not believe the Morse code requirement would stand. I believe "ramps"
would be required for Morsely handicapped citizens just as they are required
for wheelchairs.

> The same battery you will use to power the HW-7, or a different battery?

The HW-7 could be operated a long time on any typical laptop battery. Typical laptop has a 2-4 hr operating time for the first year or two, but only if you keep it charged every other day (they normally draw some current even when turned off). The HW-7 and a great many other simpler QRP rigs are far less picky about their power supply. The VHF marine radio in the life-boat is a good idea, but you will need special batteries for these radios for a long shelf life, and they probably won't be useful until shortly before someone can hear or see the helicopter, and untrained people could have wasted the batteries long before someone was in range.

Which brings me back to the training aspect. Much equipment will be misused by untrained people, and there is no guarantee that any one would pay any heed to a trained person even if they survived the incident, but the idea behind Amateur Radio was to provide for a great number of trained people, so there would be a greater probability of trained people available in the event of emergency. There is no excuse for disregarding this issue in order to sell gadgets that purport to be useful to those who have no experience in their use.

You can have it both ways if you like, and you don't mind deliberately utilizing people with lesser qualifications in order to avoid Morse code. You stated that you would prefer SSB because it's faster. True It can be faster. I prefer to use any of the Digital modes for passing text traffic that I can maintain in my logs without extra handling. Voice modes are too slow because they require significantly more handling and must be transcribed anyway unless rumor and misinformation is your goal. It is typically required to slow down the traffic sent by voice to allow reliable transcription. This is inherent in CW operation.

SSB usually allows more fluid net operations and is requires less power consumption so it is best to have that capability, and since CW is fully compatible with SSB operation, it behooves one to be prepared to resort to or more fully use it rather than close the station early under adverse conditions.

> > If that is the case wouldn't you want someone with a whole bunch of tricks in

When camping in wilderness areas, EVERYONE should be trained in wilderness survival, otherwise they are usually a liability.

> and bear arms, that right, by itself, is a powerful check against
> any possibility of governmental tyranny -- the same way that
> states with liberal CCW licensing have experienced a major
> reduction in gun-related violent crime.

I think gun related crime and government tyranny are two disparate things. But my point has been all along that arms in the possession of citizens is no longer a check on government tyranny. The balance of power is too lop sided. That argument is the weakest of all the NRA arguments. Don't get me wrong, Larry. I support the right to keep and bear arms. It's just with the present atmosphere of pressure to increase gun control laws, the NRA needs to put forward it's strongest arguments. There's not going to be another revolution, and it sounds really lame to talk about needing to be prepared in case of one.

> When "they" start talking
> seriously about taking that right away, as they actually did in
> England, Australia, and other Third-World countries, then it's
> time to start seriously thinking about acting on such a "rebellion."

It would take a Constitutional Ammendment to eliminate the 2nd Ammendment. And if enough people were to vote to get rid of it, which is extremely unlikely in any foreseeable future, then you're going to be seriously outnumbered by the majority. The outcome would have been arrived at in a democratic process - not by government tyrrany - and you would be in violation of the law to start shooting at people over it.

> I'm sure President Bush isn't going to permit that to happen.

Heck, even Clinton didn't suggest that it should happen.

> For the first time in eight years, I have renewed faith in my
> government.

The inefficiency of CW is in the baud rate, e.g. ~10 baud, compared to 300 baud for Baudot and ASCII. The effective baud rate of PACTOR II

with its PSK modulation is hundreds of times the effective baud rate
of CW.

I think you must have gotten hold of a clunker there, or the transducer
was cocked.

I have two on my boat, one at the helm and one at the forward fishing station, and they are always dead-nuts on.

Don't leave the non-Morse-code Amateur accomplishments out it, Hans. I was far prouder of my first QST article than I was of passing my 20 wpm Extra. Those who operate the phone traffic net, or net control the SSB or CW county hunters net can be proud, too. To be more in line with the accomplishment of doing CW proficiently, the phone operator who uses proper operating techniques can be just as proud as you.

And none who have obtained amateur licenses as required by Part 97 and who conduct themselves on the air in compliance with its rules need make any apologies to anyone. In Amateur Radio, there is plenty of pride to go around and many, many ways to find it.

73,
Ed Hare, W1RFI

Did you hear about the proposed new Southgate, Ca. power plant? Very clean burning gas plant with all the state-of-the-art scrubbers; replaces a huge diesel truck facility currently on the site; reduces the annual tonnage of pollution emmission by a substantial margin; and the people turned out en masse - in the middle of an electrical energy crisis - to shout it down.

I think the reason in this case is the people feel as though their neighborhood, which is economically depressed, is being used as a dumping ground. They just use environmentalism as their excuse not to have the plant in their backyard. The little picture takes on greater importance than the big picture.

I'm not so sure about that. But, I appreciate your support of my suspiscion about Larry's motivations here. ;-)

> The FCC accepts that.

The FCC gives equal credence, presumably, to all comments because they are more or less taking an opinion poll. But personally, I prefer to have experienced people making policy decisions for the Amateur Radio Service. Most hams probably feel the same way or even stronger about that. Also, it is my perception that most people don't like being lectured by newbies in any profession or avocation. Just an observation, Ed.

And morse code using simple equipment makes that a non-issue
because?

>I'm not talking about things that are broken or worthless from the
>start (there are those) Rather I'm talking about things that don't get
>used in real emergencies either because they are not adaptable to the

If the available people aren't familiar with their
gear, then shame on those that had responsibility
for building the preparedness before hand.

>Ham radio operators are supposed to bridge the communications gap in
>emergencies for those who are trained in other areas, by being

>disaster, not by how well we can raid ham store shelves.

Yet the histroy of contemporary communications by
hams in an emergency is filled with use of modern
equipment as opposed to "what survives". That is
because the equipment that survives is more robust
to begin with (IMHO).

Well my cellphone fits in my pocket and my HT (Icom T8A) isn't much
bigger. In my vehicle I have a 2m mobile that can hit at least one
repeater almost anywhere I might be able to drive my car.
I see no real value to having an HF rig in the car for emergency
comms. Perhaps I am missing something that isn't being stated?

>If all that failed, I would be glad I know Morse code.
>

The problem is, as you note, "if I ran across the...".
The reality is that there isn't any common HF assigned
emergency frequency that people (hams) might be able
to monitor for that unexpected emergency.

What the HW-7 lacks, however, is any specific frequency
stability/readout. In using the HW-7 you must hope
someone happens to just be tuning across the frequency
you are transmitting.

Agreed.

>There is no excuse
>for disregarding this issue in order to sell gadgets that purport to be
>useful to those who have no experience in their use.

The gadgets can and should be "simple" to use if the intended
user is someone without experience.

Please define this term 'keyclown' that you seem to be so fond of typing.

thanks,

ac6xg

www.kp82.com does not know enough about N8WWM to make this claim. He just
began posting to newsgroups and is not identified by a email address or name.
He has mistakenly been identified several times as me. While we share some
views, I have always posted under my call because I have nothing to hide,
unlike you ILLEGAL FAGGOT KEYCLOWNS! Insist on the original.

I'll bet for him it's the easier of the two things. For some people,
complaining comes naturally. But I'm not really this cynical, Ed. Are
you Leroy's little brother, or just his apologist?

If you find that I said that, then you'll know that I said that.
If you don't find it, well, maybe you can figure it out for yourself.

I would make an exception for you, however.

This is not true. N8WWM the poster is NOT N8WWM the person.
To prove this, I propose a test. At QRZ.com there is a page for every
member that you can put personal information on. The REAL N8WWM will
change the page by putting a new first sentence in. Go there now to see
the original page. I challenge the fake n8wwm@my-deja.com or
N8WWM@yahoo.com to do that. Of course it will be impossible. If you
email n8wwm@arrl.net, within 24 hours of 2200Zulu on 1-25-01, the REAL
N8WWM will send you the exact wording of what that first sentence will
be. AFTER 2200Z on 1-26-01 the this address right here will post the
sentence change in the profile on QRZ.
The ONLY valid address for N8WWM that has his callsign in it is
N8WWM@arrl.net. The FAKE N8WWM can't change that.

The real N8WWM will change the first sentence in his personal information at QRZ.com 24 hours from now. The FAKE n8wwm@yahoo.com and the FAKE n8wwm@my-deja.com of course cannot know what that change will be.

Email N8WWM@arrl.net to get the exact words that will be inserted into the qrz.com profile. N8WWM will email the exact words to anyone who asks for it within 24 hours of 2200Zulu on 1-25-01. The change will be made on QRZ after that time on 1-26-01. Immediately before the change you will get your email with the text of the new sentence from the address cbersarelosers@my-deja.com.

For some reason, N8WWM's call has been fraudulently "bootlegged" on the internet. Why didn't the moron bootleg an extra class call?

I think you are mixing metaphors here, so to speak, but the point is well made. The FCC does not require consumer equipment manufacturers to include filtering.

Part 15 is another story; the Part 15 rules cover devices that are either intended, or likely, to radiate. The levels that the FCC permits Part 15 devices to radiate are strong enough to cause Amateur Radio problems.

First, incidental emitters, such as power lines, electric motors, etc, have

NO *specific* radiated or conducted emissions limits. They are subject only to the provision that they not cause harmful interference.

Unintentional radiators (computers, etc) do not deliberately generate RF energy, but they deliberately create RF signals for "internal" use. They are subject to conducted emissions limits (ie, how much signal they can put on the power line) on HF, and radiated emissions limits on VHF. The premise is that on HF, the case and intercabling on a computer is not a good antenna, so the energy conducted on the power lines is the determining factor. In practice, cases radiate, and by my calculations, if the residential electrical wiring has about -30 dBi gain, the legal conducted limits are about S5 at a nearby HF dipole 30 meters away on 3.5 MHz. Generally, the manufacturers have to include some filtering. To put it into perspective, the legal limit of 250 microvolts conducted energy is 0.00125 microvolts, generally conducted into a pretty poor antenna -- residential electrical wiring. Compare that to the 50 milliwatts you are permitted to radiate for harmonic or other spurious energy, into a good antenna. The computer system in your neighbors house needs to be be about 76 dB better than your station, before we even consider how much better your antenna works as an antenna than his electrical wiring. Food for thought before we get too critical of the industry.

Intentional radiator are a bigger issue. The concept of filtering doesn't apply there at all -- they are designed to radiate. About S9+15 dB on 80 meters, by my calculation. On 2.4 GHz, things are actually better due to increased path loss, but nowhere near perfect. There have been some NTIA spectral studies that show a distinct rise on the "Part 15" portion of the 2.4 GHz band in urban areas. At this stage, I don't know if it from the legal wireless devices, or if people have added big antennas and amplifiers, raising the noise more than the rules intend. ARRL has a couple of cases of actual interference, both of which are before the FCC.

> When the Pt 15 NPRM was in process I wrote both the FCC and my

> sure to come as result of the way it was written. FCC ignored me and
> quickly convinced my congressman that there really was "no problem" with
> it. That was a done deal long ago and won't addressed again.

ARRL did too, with the same effect. And, in one sense, the FCC is right. 99 percent of the Part 15 devices do not cause harmful interference. Unfortunately, 1% of millions of devices is still a lot.

> Ed's work is probably the only effective force in place at all, and it is largely
> educational, as we can see from here. And much of that education is
> pointed at manufacturing engineers who have no clue about ham radio, it
> seems.

Yes, but, as amazing as it is, that education is having an effect. As I said in my lenghty post, the Home Phone Networkiung, VDSL and HomePlug specs all have notches to protect ham radio. It was NOT me alone that did it, but I have no doubt that had ARRL not been involved, it would not have happened that way. There are concerned hams who played pivotal roles on the VDSL committees, HPNA and HomePlug, and it would not have happened without them, either. It is a process of teamwork and cooperation, because under the present rules, that is about the best tool we have available. All good things do NOT come from Newington, CT, and in this area, I will continue to do what I did when I put the RFI Book together, draw on the best of the best of amateur radio to ensure that the end result is what is best for Amateur Radio. Fortunately, among those best are people who are willing to give, helped by others willing to support it. I tell, you, Dick; if you had told me three years ago that if ARRL asked the industry to do the right thing, and they would do so willingly, I would not have believed you. Even I have heard the whirl of the 'copter blades from time to time.

Will it always work out that way. I don't think so, but, IMHO, it was critical to get some successes under our belt, to demonstrate to the FCC that cooperation to avoid harmful interference works, and that it is not the exception. The first industry group that asserts that cooperation is not possible is going to have some powerful examples tossed at them. And, btw, the industries involved here are giants -- Lucent, Microsoft and the like are the key players on all these committees. The ARRL RFI Task Group meeting was hosted at Lucent, by Steve Strauss, a Lucent engineer and a member of the ARRL RFI Task Group.

> Whatta scheme.

I'm not sure how much of a scheme. In some cases, the right Part 15 sharing partner can be an asset. Remote control and similar devices often operate legally on 433.92 MHz. They typically transmit a few milliseconds every few minutes. That part of the band is already "occupied" by devices with a range of a few hundred feet at best, with signals that will sound like a fast dit to us. Harmful interference? The FCC probably would not think so. Will other, more harmful, Part 15 devices be likely to occupy this part of the band? Probably not. How about 2.4 GHz and the Bluetooth threat? Those devices, short range, will be around in the millions in a few years. Can we justify not allowing them there based on occupancy of 2.4 GHz? Probably not. Can hams adopt these spread-spectrum devices and fight fire with fire, using broadband technology to make use of that part of the band occupied by broadband technology? Sounds like it; maybe that is where some of our future is.

I don't have all the answers, Dick, but I am taking the support of people like you and me (I pay dues, too, just like you) and using it to keep at it. Each committee meeting I attend costs about $1,000 or so. Factoring in the expense of producing QST, I estimate that about 50 people are members to send me to one. Man, I hope that it is MY membership that pays for the ext -- sounds a lot more glamorous than helping to pay the heating bill. You and I both disagree with ARRL on issues like Morse code testing, in opposite directions, I am sure. But THIS sort of thing is what is really important. Little LEO threats and ground-imaging radar threats on 70 and a host of similar ones to come down the pike are going to make us or break us. I gotta' say, Dick, that as far as I am concerned, any one of these justified my dues dollars for 2001, increase and all. And I get QST, the Web and such besides.

So when you do what I do; re-up in spite of some differences of opinion, let me know. I will personally thank a League member for helping to make it happen.

73,
Ed Hare, W1RFI

> 2) Anarchy.

Let's add to it:

3. Spectrum threats

4. Spectrum sharing - (Part 15)
5. CC&Rs
6. Zoning restrictions
7. RFI to consumer electronics
8. Declining numbers (possible after the NC Tech's start expiring)
9. Insufficient Elmering of newcomers
10. Unresolved repeater coordination issues
11. Amateurs losing ground relative to changes in technology
12. Rising noise levels
13. Inadequacies in the content of written examinations

Somehow, I still wouldn't put "Lack of sufficient Morse code testing" anywhere except the bottom of this list. Others' mileage may vary, but I would strongly disagree with anyone who put "Lack of sufficient Morse code testing" near the top.

73,
Ed Hare, W1RFI

If you want to remove "almost anywhere" from your sentence, you will need an HF mobile. Murphy might strike when you're "almost anywhere"...

>I see no real value to having an HF rig in the car for emergency
>comms. Perhaps I am missing something that isn't being stated?

It depends on where you plan to go. Stay on the interstates and in the cities and a cell phone should do it. However when I'm heading across the Navajo Nation on my way to Colorado, the HF mobile is comforting...

>The reality is that there isn't any common HF assigned
>emergency frequency that people (hams) might be able
>to monitor for that unexpected emergency.

That's what the tuning knob is for. Just find a QSO and break in. Most hams will be happy to make that emergency call for you...

Ahem...you pointed a finger back at yourself and then at the
State Department for "cleverness."

To switch over to CW for an order-wire or command context
from FSK is a *dumb* idea. Dumb technically, dumb
operationally.

>I made no such claim regarding my expertise. Do you know what a person
>who tells untruths is called?

Now, now, you are starting to sound like your buddy, the
USMC reject.

Dave, I called the procedure DUMB. Other folks in
communications have already established the methods
decades before you. You are free to call their methods
"wrong" but it is up to you to show why in order to verify
your claims.

>> Technically, switching over to CW from FSK TTY should be
>> possible but it is a most odd sort of thing to use as an
>> order-wire (a command circuit for radio circuit purposes).
>
>We didn't switch back and forth, Len. We used CW on one frequency and
>ran the TTY circuit on a different pair.

Ah, so the story CHANGES! Now, looking at it all in operation
and considering the methods, why does this CW-on-a-different-
frequency for an order-wire have more advantages than having
the circuit commands sent over the TTY circuit?

>I stated that CW was used to arrange QSYs, openings and closings of the
>TTY circuit. It was also necessary to confirm crypto used if that is
>the "synchronization" to which you refer.

I have to admit you might have me there, Dave. I've only been
involved with three different crypto methods of TTY, all over
military circuits, between 1953 and 1989. Without revealing
anything like a state secret or violating national defense, it is
safe to reveal that all of those military circuits self-synchronized.

No doubt State had another crypto system.

I might mention that secure Army field communications using
crypto digital voice do synchronization in real-time. There is
no need for any auxilliary "second channel" to "confirm" any
crypto settings. Such has been operational as the SINCGARS
family since 1988. It's also capable of frequency hopping.

>> I said it was a dumb idea if you did it that way. I still think so.
>
>It is obvious that you did not and do not understand what was stated.

Given a lot of text it is possible to "read between the lines" of
what a person writes. In the above case there seems to have
been some omissions of details. It's very hard to fill in details
by trying to read between lines there...

>I'll leave it to you to figure out the necessity for such operation.
>You were not a State Department communicator any more than you're a
>radio amateur.

Sorry, Dave, you will either have to explain your activity or just
drop the subject. While my only contact with State was a
quick time on RCA's RACES machine (State had two of them
for message storage-retrieval), you ignore that I've had some
thorough experience with HF communications and did it with
operating methods well worked out by others. Also on VLF,
LF, MF, VHF, UHF, and a few microwave bands.

I make no claims of expertise in communications methods, technically or operationally. I can analyze and reason the why and wherefore of how things are done and observe that methodology of operation in communications done by others before me.

There are few US radio amateurs who have any direct experience with either State Department methods or crypto communications. While I can understand your mentioning such items in close proximity in the same message, they are bogus for trying to make your case. [US radio amateurs are forbidden to use systems which obscure their communications...it's in the regulations]

The FCC issues US amateur radio licenses, Dave, not the US Department of State. You let me know if that changes, okay? Oh, and the FCC does not require any Commissioners or staff to hold amateur radio licenses in order to regulate US amateur radio or issue amateur licenses. Let me know if that changes, too, please?

In article <3A703743.FF0CF160@dvol.com>, Brian Kelly <kelly@dvol.com> writes:

>> Then you haven't used anything with more than 20 db dynamic
>> range. I agree that the old-style 1940s Panadaptor wasn't much
>> good with its semi-linear (not logarithmic) vertical display.
>
>The utility in using a spectrum analyzer for ham receiving purposes is
>usually to

>detect the existence of a signal, not to accurately measure it's amplitude or
>frequency. Junk analyzers work fine in this kind of service, some being
>better than others.

If all you have is junk equipment, then all you do is junk operation.

Junk spectrum analyzers existed as ready-made equipment for a long time. Their dynamic range never got beyond 40 db and the accuracy, to be kind, was seldom better than +/- 5 db on a log scale, if you were able to get one with a log scale.

>When I need to get serious about spectrum analyzers for machine
>vibration work I wheel out a $5-6k calibrated spectrum analyzer. Bruel &
>Kjar makes one which cost $25,000 a few years ago. There are spectrum
>analyzers and there are spectrum analyzers.

Back 20 years ago one of the semiconductor makers had a kit containing a many-bit A/D and a pre-programmed microprocessor. It was an audio range spectrum analyzer whose output could be displayed on any oscilloscope. Was better than 30 db in dynamic range and covered DC to about 20 KHz. Rocketdyne Instrumentation Lab got one and it worked very well. While considered a curiosity back then...it used FFT techniques to do the transform from amplitude-time to amplitude-frequency...it was a precursor to what now exists in consumer electronics music systems selling for less than $200 for the whole music system.

Navies of the world that use sonar have a form of such a spectrum analyzer (FFT for analysis of the sonar signals) for over 30 years. The same goes for some Electronic Warfare systems for good discrimination among several signals. Those are also spectrum analyzers.

I'm not talking about an all-purpose instrument with laboratory quality and accuracy. That's not needed in this discussion.

>> the signals within sweepwidth settings are visible. 50 or 100
>> KHz sweep width no problem to see CW or any other kind of
>> modulation on those incoming signals. Everything is on the
>> display at once.
>
>Understood, I've seen good spectrum analyzers (vs. HO-10s) used to present
>band
>displays. On HF they're close to useless because of the junk and noise on any
>open band for one. In a contest all you see is one monster 50-75Khz wide
>spike.

Then the analyzer's bandwidth is way too wide. In all spectral analysis there is an optimum bandwidth, sweep rate, and band span of sweep tuning. That's been established decades ago. In "modern" (less than 2 decades old) lab spectrum analyzers, the selection has be hard-wired into the panel controls.

A spectrum analyzer is simply a receiver with automatic sweep
tuning and display on a 'scope instead of aural output. The
bandwidth can be as narrow as 10 Hz to show just about
everything or as wide as 10 KHz to show "everything in a 50
to 70 KHz" span as one large spike. Attention to skirt
selectivity is a must, more critical than with an aural output
receiver...and related to the dynamic range.

>Spectrum analyzers simply are not a useful enough operating aid to bother
>with.
>One of the high-end Icom xcvrs has a pretty decent built-in analyzer but
>nobody uses it on an ongoing basis.

Now, now, Icom has been selling high-end models with built-in
spectrum analyzers for several years. The IC-756PRO is $3600
and the IC-R9000L (receiver only) is $9500. Someone is buying
them...

One reason spectrum analyzers are "simply not useful enough" is
the lack of dynamic range. If it has only 20 db range, it might as
well be a linear display. That range is useless. A range of 40 db
is better but still inadequate for practicality. 60 db is much
better but analyzer internal bandwidth filters start needing brick-wall selectivity. 80 db is an optimum dynamic range in trading off
internal filter selectivity, logarithmic IF and detector range, and
everything else. You can relate the dynamic range to S units if
you like...80 db is practically the entire range of an S meter.

>The proof of the pudding is that if spectrum
>analyzers had any particular value as a receiving aid the things would be on
>every operating desk.

Heh, heh, heh...if morse keys had any particular value, every
radio amateur would have one on their operating desk... :-)

>I don't know of a single big-gun HF weak signal wonk who
>uses a spectrum analyzer and I kow a bunch of those.

...Hmmm...I guess that is supposed to settle that?   :-)

>> Sound interesting?   :-)
>
>Write the article.

I'm not. I know of two such projects already in the works,
both for amateur radio use. One is upstate California, the
other one is local to me. I'm in an advisory capacity in the
group down here. It simply wouldn't do to have some non-ham be in the byline of such an article, would it?   :-)

Is this the K3LT "broken leg and the wife is screaming" scenario?  HF
always gets through?  Or is it CW always gets through?

Weren't you on the other side of this argument last time?

No scenario, just a statement of fact/opinion... :-)

>HF always gets through?

HF SSB is the best *all around/all location* mobile rig for personal emergencies while traveling in a vehicle. There are few places that you can go where you cannot find a contact for any possible emergency communications. The same cannot be said for VHF/UHF...

>Or is it CW always gets through?

While I normally work 100% CW when I'm HF mobile, I always carry a mike in case of a personal emergency. IMO CW is the least effective tool for any emergency...

>Weren't you on the other side of this argument last time?

I think you will find this consistent with what
I have said in the past...

OF COURSE there is! Every state has at least one emergency frequency.
As always, you naturally assume that no one on a SSB frequency would
ever have any reason to use CW instead of SSB.

Forget Monica. Did you see Bill's eyes light up, and the grin on his face, when he saw those cheerleaders during his farewell ceremony? Heck, I thought he was going to get up and start chasing them right there.

Look, I'm all for enjoying the view of a nice looking woman (and, even more, the pleasure of a nice woman), but that man really needs to learn that there is a place and a time for all this (the oval office is not that place and a farewell ceremony is not the time).

Someone reported that the Morse code requirement was actually tested
in court and fell to the ADA. I think a rules/regulations requirement
would stand up in court.

Hope this is not a double posting. My newsreader screwed up.

Problem is that no one knows who may do what to whom or how. The
potential is ubiquitous. Not until interference shows up and detective
work tracks it down and ID's it can the beginnings of a solution take
place. Lame plan. The stuff is likely to be any and anywhere.

IMO this sort of activity is one of the most critical functions of
ARRL. If they don't do it it most likely won't get done. I'm sure there
are other similar but less sensational, such as CCCR's. When you gonna
go to work with the same effectiveness on that one?

My disappointment is not so much with either the ARRL nor FCC, but with
hams who won't recognize the obvious - that there is a communications
advantage in every ham being able to communicate via radiotelegraphy.

But THIS sort of thing is what is really
> important. Little LEO threats and ground-imaging radar threats on 70 and a

When I re-up it'll be due to the likes of you doing the work you do so
well. A pat on the back is well deserved. And noted, as a definite
valuable plus to continued membership. Right now I'm leaning in that
direction. I got a renewal notice in the mail today. The three year
membership looks to be a bargain what with the increase.

Now for a small proposal. Send me one of your "scratch and dent"
Handbooks and I'll use it to formulate at least 10 new questions,
following the format of those you posted the other day, to submit for
consideration by the QPC. Also, I will send to you, by return mail, a
copy of Robert L. Shrader's book
"Electronic Communication", fourth edition, for disposal as you see fit.
It's not new but is in very good condition, suitable for a library most

anywhere, I think. I ran across and bought a nice copy that I couldn't allow to remain derelict and I already had one.

If I find it not too time consuming I just might do more than ten questions.

I have to wonder how much all of the complaints about the
disability-code-waiver system and the abuses played in the FCC's decision. I am
sure they saw the ARS as an administrative pain in the butt at at that point.
Even our friend Riley Hollingsworth is trying to give us a message about the
effect of what he terms "petty squabbles."

IMHO, we should concentrate on the important issues. In my personal experience,
the FCC is willing to devote considerable time and thought to what it believes
to be legitimate and important issues.  The unimportant ones can be round filed
or swept away with one sweep of the rulemaking broom.

>Me too - so long as you have a code speed.

Then you are concerned about his code speed. 0 is as real a number as 5.

If you ARE concerned about people having a code speed, you would be concerned about the large number of hams who pass their code tests and never use the code. Those who do not operate are also at 0 wpm.

>potential is ubiquitous. Not until interference shows up and detective
>work tracks it down and ID's it can the beginnings of a solution take
>place. Lame plan. The stuff is likely to be any and anywhere.

When I went to Phoenix a few months ago for a convention, I also did some field testing on VDSL. I brought a small 80 M loop antenna with me, to do some DFing. While there, I also heard a few of the PX-421 wireless modem jacks. They were literally audible in my /M setup for a couple of miles on the mobile whip. I tracked down one source in about 30 minutes of driving around, holding the loopstick out the window. It was really dramatic being able to drive past the house where it was installed and see the null. Phoenix was ideal for that, however, with underground wiring. If the overhead wires were radiating, I never would have gotten a null.

That is all bad enough. What about the aggregate of many, many devices being heard at once. One alone is not harmful interference, but put 'em all together. Those NTIA studies show just that on 2.4 GHz. A couple of hams on the west coast have done the same.

>>It is a process of teamwork and cooperation, because under the
>> present rules, that is about the best tool we have available.

> Yeah I know, but you weren't tagged the "point man" without reason.

Actually, my RFI work at HQ has just sorta' grown up on its own. I do what is right for ham radio in a number of areas and they let me. It beats letting my boss think up things for me to do. :-)

>>Even I have heard the whirl of the 'copter blades from time to time.

> See, those loud choppy noises do some good after all!

No, had I acted on my suspicion that the BBEI (Big Bux of Evil Industry) would never do the right thing, the outcome would not have been so good. There are times to be adversarial, but trying the cooperative approach first is much faster, and if you have to get adversarial, being able to demonstrate that you tried to be cooperative first is a plus.

>>I'm sure there are other similar but less sensational, such as CCCR's.
>>When you gonna go to work with the same effectiveness on that one?

I personally won't be doing that. I have quite enough bit off already, and as I all too well know, if one takes on more than one can handle, the end result suffers.

>> In some cases, the right Part 15 sharing
>> partner can be an asset.

> Goood analysis, should be read by every ham.

One of the things I hope to have more time for is to develop more info packages for the ARRL Web page and maybe a few articles. Hams need to understand better what it took me a long time to understand -- in today's world, spectrum is shared. It is NOT our 420-MHz band, we are one of several sharing partners, including the military and radar (primary to use) and Part 15, (secondary to us). On 2.4 GHz, we are primary to Part 15 and secondary to Industrial, Scientific and Medical. The trick is finding compatibile sharing partners and choosing compatibile operating modes with the other signals on the band.

> My disappointment is not so much with either the ARRL nor FCC, but with
>hams who won't recognize the obvious - that there is a communications
>advantage in every ham being able to communicate via radiotelegraphy.

Yes, there is some ignorance about OOK CW, Dick, in both directions. Some hams do believe that it is the most effective mode in the Universe. It is not; some of the digital modes will blow it away. Others pooh pooh the mode and don't see that, of the modes commonly available to hams, it is the most effective under most noisy conditions.

Sure, there is a communications advantage of having every ham able to communicate with Morse code. But it ain't gonna' happen, and it has not been so since I was first licensed. If the regulatory goal was to have every ham able to communicate with Morse, then the FCC rules would require that every ham maintain Morse code transmitting and receiving equipment. You filed extensive comments with the FCC, did you not? Did those comments ask that every ham maintain Morse code equipment? Probably not.

The reason that I believe to behind most desire to maintain the code test is that some hams who do not believe in the usefulness of the mode as much as I do feel that without forcing people to learn the code, the mode will fade away. I disagree.

The bottom line, Dick, is, IMHO, Morse code testing will almost certainly be removed from the Amateur Radio Service, as a minimum in its present form. That means that the ONLY tools you and I will have to promote its use will be to educate hams about its merits and to encourage them to try it. That job will have been seriously undermined later by the way Morse code is being presented now, as a soul-hardening task to be undertaken to keep the evil one out of ham radio.

> When I re-up it'll be due to the likes of you doing the work you do so
>well. A pat on the back is well deserved.

No pat necessary, Dick; it was my job. I am proud to do it, and I try to do it well, but the only reason it is happening is because 165,000 people chipped in.

> The three year membership looks to be a bargain what with the increase.

$31 a year for the non-senior dues, vs $39 a year after they go up. I figure I will hang with ARRL at least 3 years, so I ponied up the $93.

Well-known provision of law in the US - One has no standing to
file unless and until one is injured somehow by that law.

Federal law requires an actual "case or controversy". "Bystander gotchas" don't count.

>The matter more or less before the Commission is complaint against the
>political, legal and constitutional validity of a the Morse code exam
>regulation. An attack against the petitioner is irrelevant.

Attacking the standing of the petitioner is _de rigeur_ in such cat fights.

One more example of being a wannabe and missing the gut-level recognition of the above principles of litigation.

  IIRC the Life Membership fee was 20 times the annual membership
  when I signed up. That's self-maintaing if the investment
  earns 5% annual interest. Some years it can, other years it's
  more difficult.

Probably because they don't see any value in knowing how to use CW on
the air, I'd imagine. But so far they don't keep insisting it's a
Federal civil rights case, at least on rrap.

No doubt, FCC got saddled with that one and there wasn't a whole lot
they could do with it that was effective but also fair and not
vulnerable to abuse.

I am
> sure they saw the ARS as an administrative pain in the butt at at that point.

If there were no applicants taking advantage of it there would be no
problem. But we know that won't work all time.

> Even our friend Riley Hollingsworth is trying to give us a message about the

Yeah, but he's concerned with the nonsense frequencies on SSB. As N2EY
points out, you don't hear that stuff on CW.

> IMHO, we should concentrate on the important issues. In my personal experience,

Which really means it is vital that FCC and ARRL be in direct constant
communication so that there is no doubt about what is important and what
is not. I'm not sure that has been happening effectively and reliably in
the past few years.

It's not hard ED, the league knew how its members felt long before the
issue came up from results of member surveys, but the board of directors
choose to stick their heads up their rectums and ignored us.

The value in knowing how to use CW on the air is obvious to everyone.
The value of the Morse code requirement is not obvious to everyone.
We don't need laws designed to protect us from ourselves.

The value in wearing a motorcycle helmet is obvious to everyone.
The value of a helmet requirement is so non-obvious that many
states, including Texas and Arizona, have dropped the requirement.
We don't need laws designed to protect us from ourselves.

The ARRL says they're trying to protect spectrum, true, but their own dumbed-down licensing & limp-wristed policy proposals will make it more and more difficult for them to do so, because how can they successfully defend amateur spectrum when its users are increasingly becoming as dumb as a post and as useless as CB'ers? Soon, there won't be anything good left to defend. What words can the ARRL use to convince the FCC or Congress that the spectrum is best left to poor operators with bad operating habits? The scenario is akin to a FLY defending a Dung-Heap (ARRL being the fly), they're trying to defend a service that progressively gets stinkier with every new policy they propose. If the ARRL wants to defend amateur radio, let them propose improving licensing standards. The high merits, integrity, and abilities of spectrum users is what will protect the spectrum best and will provide a pool of quality radio operators for service to the country when needed. Real Value!

I'd still be a league member today, maybe even a life member, but the ARRL screwed up when it went against it's long held principles and the founding purposes amateur radio was built on.

So...what are you actually saying there?  Seems to me it is a nice
```

bit of wording that says "shut the hell up because you don't count unless you've done the same thing as I did." Or are you saying that it is somehow "improper" to petition our government unless one is "injured?"

Seems to me that there is a rather actual CONTROVERSY going on in regards to one small regulation by a government agency. Are you saying that there is "no controversy" just because you don't believe there is one?!? Or are you just saying the above to try and make some kind of case for a demand to shut up?

>>The matter more or less before the Commission is complaint against the
>>political, legal and constitutional validity of a the Morse code exam
>>regulation. An attack against the petitioner is irrelevant.
>
> Attacking the standing of the petitioner is _de rigeur_ in such
> cat fights.

Interesting resort to a French phrase which means something like "SOP." :-)

I suppose such pseudo-sophisticated statements are necessary when some cats get scratched...and the result is a carefully worded version of "#$%&!!!, do it like I had to do it...!"

> One more example of being a wannabe and missing the gut-level
> recognition of the above principles of litigation.

Oh, my, what next? Quotations of Case Law in the USA? :-)

What is your take on the FCC's own statements (in 1990 and in 1999 Reports and Orders) that it does not feel that a separate morse code test does not meet their requirements in determining whether or not an examinee can be considered suitable for an amateur radio license?

Would you stuff the FCC's own statements into the "wannabe" and "gut-level recognition" pile? Or will you acknowledge that the FCC is currently the regulator of US civil radio regardless of the current administration and your views of the political leanings of the about-to-be new Commission Chief?

...the reply has all the bunting and flags of "when I was younger we did things the 'right' way" attitude. :-)

Mostly the early amateurs that "amateur radio was built on" were a bunch of unruly rascals who roamed the spectrum at will, interfering with commercial and military stations alike, and had to be rounded up and corralled at "200 meters and below". Far worse than today's CB crowd by a long shot!

Well, maybe if they can get their girlfriend to fill out a job
application for them, and go drug-free long enough to pass a urinalysis,
they might get a janitorial or security job at the new power plant.
Then they can go to night school and get a GED, so they can apply for
better positions, such as pipefitter, instrument tech, etc. Then they
can move to Monterrey and commute 2 hours in an SUV...

If he rolls back Brady and the GCA68, we'll be back on the right track.
I also want him to open military artillery ranges the third weekend of
every month for civilian cannon practice.

Of course you know what it means because your CB syntax is perfect. And
it doesn't appear to violate a single FCC regulation while getting the
meaning across perfectly. It's the kind of stuff I do on the air just
to aggravate the Radio Police�.

That's certainly easier to defend than the 'no users' scenario.

The Constitutional argument is lame?

Which are the strong arguments?

> There's not going to be another revolution, and it sounds
> really lame to talk about needing to be prepared in case of one.

We've lived a generation not being allowed to own offensive weapons.
Within this generation, we will not be allowed defensive weapons. By
the third generation, even "sporting" weapons will be gone.

The liberals will round up all the mounted deer antlers and send them to
China to make afro-deesiacs under some favored nation treaty.

Seem's like the ARRL can't win, doesn't it. When folks were screaming to have the code requirement reduced or removed, the League was seen as a bunch of old fogies who wanted nothing better than to keep out anyone unable to copy code. Now that the licensing structure appears to have favored the no-code crowd, the opposition thinks the League is at fault.

If you want to change the League, join and vote. If you are not a member, quit complaining. The only reason I'm not a life member is the cost. I should have become a life member as soon as I was licensed in 1977. It would have paid for itself several times now.

Join the League or not. But the issue of licensing and code requirements are not decisions they make. The ARRL is the most vocal representation we, as amateurs and others, have with respect to hobby radio. If not for the League, only commercial interests would be heard by the FCC.

My opinion. I apologize to the newsgroup for wasting space where I would rather read posts swapping gear.

> someone happens to just be tuning across the frequency
> you are transmitting.

You raise several good points. Frequency agility has the advantage of being able to break into a QSO in progress. The Hw-7 used to be worthwhile for ragchew if you had a xtal in the Novice band, because it was so full of signals all the time, and lots of people would tune around after making a call. It's not happening much anymore because there are fewer Novices, and there are fewer people who have had the inclination to learn efficient operating techniques anymore. These are some of the things "not stated". Your questions reveal that (like many today) you weren't required to develop certain skills that are better developed with HF CW QRP operations. So sadly, you don't know what I'm talking about. I can only blame this on the licensing structure, because even though 97.1 is well stated, the license structure just isn't supporting it anymore.
http://www.arrl.org/FandES/field/regulations/news/part97/

Another idea (probably stated more fully in the 87.400's) is that there are no specific assigned emergency frequencies in ham radio, because they are ALL Emergency frequencies. The idea, was that ALL hams be able to support emergency communications and that ANYONE be able to perform them. The 2-meter mobile is a great asset, but on longer trips, you may find large stretches of no coverage, or repeaters where all the regulars are either on the road themselves or just busy elsewhere. In addition to developing an emergency comm's monitoring system on a local wide area machine, you should also look into ARRL operating aids and publications (even older ones devoted to Novice training) and get involved with CW NTS nets and MARS (you don't have to do it all at once, but each are good experiences).

>
> Actually, you could include a solar panel and/or a hand generator
> to power it.

The solar panel would be far too fragile, but the hand generator idea has promise. There is a Short-Wave receiver on the market, that has a clock spring generator, that can power the radio for 30 minutes after being wound up. Neat!

Jim, ac6tk

They were less concerned with testing back then, because the Hammurabi code was pretty much the rule of the day. ;-)

In its comments to the FCC wrt restructuring, the ARRL you espouse so
strongly asked the FCC to increase the technical content of the written
exams to offset any changes in Morse-code testing.

> The high merits, integrity, and abilities of spectrum users is
> what will protect the spectrum best and will provide a pool of quality
> radio operators for service to the country when needed. Real Value!

The ARRL has been steadily improving its Tech Info pages on the Web, has
changed QST to offer material to help the newcomer learn the ropes, has
started an Educational and Certification program, all intended to help hams
be better hams and better fulfill the goals of the Service.

>bit of wording that says "shut the hell up because you don't count
>unless you've done the same thing as I did." Or are you saying

>that it is somehow "improper" to petition our government unless
>one is "injured?"

One has standing to file suit in Federal proceedings when one is affected somehow by the statute or reg or action of the agency. To use your inaccurate phrasing, when one is injured or can be injured.

If passing the test is the only barrier to getting the license, you have standing to protest things about the test - you are "affected". If you are not eligible to get the license even if you pass the test, (a representative of a foreign country, for instance) you do not have standing to protest the test but do have standing to protest the bar that affects you.

>Seems to me that there is a rather actual CONTROVERSY going
>on in regards to one small regulation by a government agency.
>Are you saying that there is "no controversy" just because you
>don't believe there is one?!? Or are you just saying the above

The trial court judge determines if there is a true "case or controversy". Smart lawyers make sure that one exists before filing Federal proceedings.

>>>The matter more or less before the Commission is complaint against the
>>>political, legal and constitutional validity of a the Morse code exam
>>>regulation. An attack against the petitioner is irrelevant.
>>
>> Attacking the standing of the petitioner is _de rigeur_ in such
>> cat fights.
>
>Interesting resort to a French phrase which means something
>like "SOP." :-)

Right on, brother. I once was the recipient of such an attack by an opposing attorney because I disclosed in a petition against his client that I was a former FCC employee, even though the law required me to make such a disclosure in that proceeding. SOP indeed.

"If the facts are against you, pound on the law. If the law is against you, pound on the facts. If both are against you, pound on the opponent. If everything is against you, pound on the table."

>What is your take on the FCC's own statements (in 1990 and in
>1999 Reports and Orders) that it does not feel that a separate
>morse code test does not meet their requirements in determining
>whether or not an examinee can be considered suitable for an
>amateur radio license?

IOW - they feel that a separate Morse test meets their
reuirements ... they're the ones who set the rules...whether
they are accurate or not.

My personal feelings - do away with the Morse TEST. I've been
public with that for years.

>Would you stuff the FCC's own statements into the "wannabe"
>and "gut-level recognition" pile? Or will you acknowledge that
>the FCC is currently the regulator of US civil radio regardless of
>the current administration and your views of the political leanings
>of the about-to-be new Commission Chief?

What planet did you just arrive from, Len?

Ever since the reign of Madman Mark (Fowler) I've had no
problem separating the agency and its function (which I
respect) from the Five Tubeless Tyres who sit on the Eighth
Floor and flail around in their attempts to steer the agency
(whom I may not respect).

To quote my erstwhile teacher, Mr. Justice Marshall:
"What do you mean that folks may not like you? President
Eisenhower is President of the United States and half the
people in the country don't like HIM..." <ggg>

R.I.P. Brother Thurgood.....

I agree that the public is being given more access to masws
communication...
BUT
the large telecommunicators have again stopped the low power FM
community stations from operating legally and we are seeing the mergers
of media giants including newspapers, radio and TV that were once
deemed monopolistic...
as for HAM RADIO: -- Hams are but a minor subclass of the public.
They are those hobbiests who have followed FCC regulations and applied
to take ham exams...They are not "the public" at large. IMHO they
should remain protected...That is - the frequency allocations should
remaion protected...
BUT
Politically if they want to remain protected they must prove their
worth to the USA, over and above the public. An amateur Radio Operator
is no longer an apprentice commercial radio operator. Modern
technology has made the commercial FCC Radio Operator obsolete and thus
the Ham who is a commercial radio operator in waiting is also obsolete.
The only way to bridge that obsolecence is to bring up the Hams and
their licensing exams to the standards of modern communication
technology. The ARRL could be a driving force to do so...but
apparently it is not at the present time interested in strengthining
the basis and purpose of the hobby....The ARRL at present is expecting
a future decrease in membership and is thus trying to increase its
revenue by raising its dues...
Ed...I have news for you...You can't sell stale bananas by raising
their price.   Enuf sed.

This sounds like a bunch of crap. Even if the files were corrupted there are multiple copies of files backed up onto tape or CD-ROM. I know the outgoing democrats were a mean spirited bunch of losers, but this is going down as another ham lengend.

Regards,

Duffy - WB8NUT

That's why Dick has his lifetime membership in the QCCB (Quarter Century
CB) Club.

I am not a CW purist, I am a CW enthusiast. I enjoy CW for
recreational purposes, but I also realize it's modern practical
limitations. It's not that it wouldn't work in a pinch, it's just that
there are other devices or modes which usually are a much better
choice to use in a personal emergency...

>so enough of me being a jerk (according to Hans).

I didn't take any offense in your question Brian,
 and I don't think that you are a jerk... :-)

The ARRL is not interested in doing it exactly the way you say it should, so in your mind, it is not doing it at all.

It is too bad; the things you are choosing to say to tear down amateur radio to be "right" are undermining the very principles you stand for.

>From: Cecil Cecil.A.Moore@IEEE.org

>> What is NVIS?

>Near Vertical Incidence Skywave

To add a bit to that, it is a term applied to the energy from an antenna that is radiated nearly vertically upward from the antenna. At lower frequencies (perhaps up to about 10 MHz or so, under some circumstances), it is returned to earth by the ionosphere, relatively close to the transmitting station. It is most useful on 3.5 MHz, and sometimes on 7 MHz, for communications out to about 100 miles or so.

A vertical antenna radiates very little NVIS, so it is not as good a "local F hop" antenna as is a low horizontal dipole.

Just like those who support keeping code testing, each no-code test advocate
seems to have their own technique for supporting their cause. Some on both
sides make valid point; others on both sides appear ridiculous in their
assertations.

I agree; there is considerable room for improvement in that area. OTOH, I can speak of my own work and my good relationship with OET and the Enforcement Bureau on RFI matters. I speak of my own work because I know it better than I know about everybody else's. :-)

You are incorrect in assuming my initial comments
were about a "civil rights issue", if you read carefully you
will realize that I was saying a "due process".

But, it now appears that the Morse code exam
requirement is not in conformity with law.
5 USC 706(2)(a).   The FCC stated that the only reason
to retain the 5wpm exam was ITU rule S25.5.

No sense fight about "civil rights" or "due process"
when 5 USC 706 will due the job.

Prior to April 15, 2000, a person who took a 13 or 20 wpm code and
fails it, was adversely effected by 47 CFR 97.503(a)(2)&(3);
therefore, had standing.

> >The matter more or less before the Commission is complaint against the

>
>   One more example of being a wannabe and missing the gut-level
>   recognition of the above principles of litigation.

So far, no one need to prove standing. Indeed the FCC took action on their
own intitiative, to wit:

The 13 and 20 word per minute telegraphy examination was removed as a
requirement in 1999.   The FCC stated in its Report and Order (FCC 99-142)
for WT Docket #98-143 that:
(a) "the public interest will best be served by reducing the telegraphy
examination requirement to the minimum requirement that we have found that
meets the Radio Regulations" ;
(b) "an individual's ability to demonstrate increased Morse code proficiency
is not necessarily indicative of that individual's ability to contribute to
the advancement of the radio art" ;
(c) "such a license qualification rule [Morse code exam] is not in
furtherance of the purpose of the amateur service and we do not believe that
it continues to serve a regulatory purpose" ;
(d) "the amateur service is fundamentally a technical service, the emphasis
on Morse code proficiency as a licensing requirement does not comport with
the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and
(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

After the Commission put that ink on the parchment, how hard to do think they wil
fight the keep ITU rule S25.5 afloat.

Exactly. If by this point in history hams had found any particular real-world advantage to using spectrum analyzers for on-the-air ops the things would be in all over the catalogs. They ain't and sure as hell that settles that. Writing off spectrum analyzers as useful communications tools has to do with seasoned radio operators being able to separate the wheat from the chaff, ya know what I mean Len?

Ah, very short skip. Should have said VSS :-). I've noticed it lately on 40 meters around noon. A regular in my group about 10 miles away who usually runs S5 (on groundwave) has been booming in here at +20 over with QSB...

>A vertical antenna radiates very little NVIS, so it is not as good a "local F
>hop" antenna as is a low horizontal dipole.

Brian asked if a mobile antenna being a vertical would be good for NVIS. I think he was commenting that perhaps mobile HF might not be as good for *local* emergency communications. I would agree HF might not be the best choice for local personal emergencies. A cell phone likely would be. However to answer the question Brian, you don't really need to rely on NVIS for someone close by on HF. You only need someone with a telephone anywhere in skip-land who can make an emergency long distance call for you...

Very few vertical antennas radiate "end fire" Ed. :-)

Look at US Army and USMC humvees equipped with HF-VHF
radios and long whips. Those are already tied back at a slant
courtesy of an extra little cord and clip. The radiation blob is
now upwards a lot more. Army has been doing that for years.

NVIS technique is standard doctrine in military field radio.

The "wind-up" receiver has been around for at least three years,
first mass marketed by a South African company which designed
it. My neighbor has an AM-FM broadcast one that includes a
"fragile" solar cell array. Several pocket calculators have a
"fragile" solar cell array.

The US Army had the 10 to 15 Watt RF output AN/GRC-9 in WW2,
manpack by two men, one carrying the arm-powered generator with
its funny tripod-seat arrangement. Trust me, after a half hour of
continuous winding (peak load on transmit was 40 W max.), the
"winder" was QRT and needed replacing.

All of this is rather old hat and been done before. If anyone is trying
to seriously cruise for new ideas on "emergency power," doubtful
IMHO, then they should investigate leg power. Leg musculature
has more mass and can be conditioned by exercise off of a bike-
mount-like generator adaptation. This leaves the arms and hands
free to control an Rx-Tx.

Ed, in Rockford, Illinois of the 1950s there were only TWO stores
that sold radio parts suitable for amateur radio equipment. [that's
where I grew up] I was visiting there last September and there
are now at least FOUR such places. Three of those are also
heavy into carrying computer-related stuff...which should not be
a surprise.

Right now, at home in a suburb of Los Angeles, there are at least THREE stores within a 3-mile driving radius which carry "ham radio parts," one of them the HRO branch mentioned. None of what I mentioned are of the "consumer electronics" chain stores such as Circuit City, Best Buy, or Radio Shack.

Electronics distributors will sell over-the-counter as a general rule. Out here, there's an Avnet place within 2 miles and an Allied Electronics within 10 miles (at the other end of the Valley). Problem is that hardly any distributors or retailers carry "ham radio parts" as such...it is all electronics parts.

Within 4 miles radius of my home there are three "surplus" places but the surplus is electronics manufacturer's surplus, not old WW2 war surplus radio stuff. There might be one in Pasadena still left (dunno, haven't looked there in years) at a distance of 6 miles from my house...they carried military radio stuff back in '71. :-)

I flipped through my Rolodex for electronics parts vendors in my locality and there are over NINETY of them (probably 130 total but I quit counting those that also carried computer goodies)...and none of them are the consumer electronics chain stores or computer things only type places. Only three have walk-in-and browse ham stuff and one of those is another HRO way down in Anaheim over 40 miles away.

In this urban area at least, there is NO dearth of radio parts vendors. That demise of "ham radio stores" may exist in other localities...I have no dispute on that...but few seem to realize that consumer electronics and non-ham electronics hobbyists have grown together in both numbers and variety.

I think you may be the one who is a bit shy on understanding, Randy. The point is about FRS being used for hobby purposes, NOT Amatuer Radio.

> Do you think that Len believes that what he says is untrue?

Of course he doesn't, Ed. And some people still think the world is flat and the moon is made of cheese, too.

For the record, a "lie" need not simply be "No, I did not cut down that cherry tree..." would be a direct lie.

However making statements that are deliberately misleading, untruthful, or decietful is also lying.

Lennie's frequent assertions of conspiracy, deception or attempts to manipulate ham radio for some ulterior motive are certainly lies.

The facts are there for all to see, and the ARRL certainly makes every effort to keep it's program well above board. I consider Lennie's assertions of impropriety by the League, it's board members or membership in general to somehow undermine Ham Radio to be a blatant, bitter lie.

In a minor change of subject, I have been trying to wean this thread, yet you and Hans keep seeming to perpetuate it. Things slow these days?

From you...?!?! Yes. YOU are the one always trying to jade others about "being wrapped in patriotic bunting".

Of course, when it's LENNIE that's pontificating, THAT'S alright.

You have made some excellent post's in other threads vis-a-vis spectrum analyzers and such. You should STICK to something you KNOW.

Adios.

> While I did not expect boldness and vision in leadership, I am heartened that the BoD went as far as it did. Given the past emphasis on morse code abilities thought necessary for all radio amateurs, the BoD decision seemed to be a Major Upheaval in Attitude! I have to give the BoD a warm round of applause in appreciation of actually getting around to changing its collective mind!

We'll be sure to drop them a line and let them know you have granted your approval.

Of course, I think it's been stated to you on occassions too numerous to count that the ARRL is representitive of it's membership. no the other way around.

It would be inappropriate for the BoD of an organization that espouses democratic principles to tell it's members what it's policies are.

In fact, the ARRL must represent the views of the membership.

Just as it did with the NCT in 1990, the League, once solidly "pro-code", "changed" it's policies on same when it was apparent that the generally held opinion of the membership was no longer the one PREVIOUSLY held.

I fail to see the controversy in that posturing. It's what's SUPPOSED to happen.

Steve

As with government, if you don't participate, shut your mouth and go
along with what the participants are doing.

If you don't like the policies and practices of the incumbents, then get
off your duff and become one of the leadership so you can put forth your
ideas for better ham radio.

You're betting that the ARRL and/or the ARS will be around. You're also
betting that you'll be around.

I was getting there. Using a whip tilt adapter would allow NVIS with an
80/75 and 40M whip. Once the ARRL releases that 5mhz band to the rest
of us, it can be added to the NVIS arsenal.

> A cell phone likely

Yablo Hayspanyol? Guess what happens when they dial 911 for you? Or if
they don't have your local phone book. SW Bell might not give directory
assistance to an Ameritech customer.

Back when I cared a lot about emergency comms, I would carry last years
phone book in my vehicle. I also had a hazmat ID book, repeater
directory, state and county roadmaps, ...

Yup, Doctrine! Everyone thinks it's to pass under low overhangs.

But there's such a DX following in amateur radio that these antennas get cutesy labels such as "cloud warmers" and dummy loads and such.

rec.radio.amateur.antenna:16550

The article is about a replacement for Morse that's easier to learn.
It's a lot like Morse, just a different code.

Just a minor correction; it is the FCC, not the ARRL, that will release the
band to the rest of us.

I have seen no small number of occasions where an ARRL elected position does not have opposition. Of course, running for office and then executing the duties of that office are usually a LOT more work that not liking what the other guy is doing. :-) I certainly would not want the responsibilities. I have found other ways to serve.

Another bleater that feels he needs five newsgroups to make a point.

We all know Morse testing is going to disappear, we all know it will take

3-10 years to do so. So your problem is whether to study or moo.

Len can drop them a line, too. I certainly let Tom Frenaye know what I thought
of the recent ARRL Board action and what I think the ARRL should do about the
US position when the time is right to make that decision.

Then he is not lying. He may be mistaken, but if he is saying what he believes, he is not a liar.

>However making statements that are deliberately misleading,
>untruthful, or decietful is also lying.

If he believes what he says is true, then he is not being deliberately misleading, untruthful or deceitful.

> I consider Lennie's assertions of impropriety by the League,
> it's board members or membership in general to somehow undermine
> Ham Radio to be a blatant, bitter lie.

They are only lies if Len believes that they are not true, but says them anyway. If you didn't lie when you said that you do not think he believes them to untrue, then he is not lying.

Actually, that code may very well be legal on HF. I see no reason that a "digital" signal could not be OOK CW, which is a legal modulation on HF. The other requirement is that a digital code sent must be publically documented. I would have to check with a few legal types, but I bet this would meet the requirements, under the same provisions that allow PSK-31, AMTOR, and a number of others.

Correct.

>So far, no one need to prove standing.

Depends on the proceeding. I'm sensitive to "standing" - I represented a (commercial) frequency coordination group in a fight against a specific Commission license grant in opposition to the coordinator's recommendation and was shot down by the grantee (and ultimately by the Commission) on the basis that my client did not have standing - we interpreted various Public Notices as granting us standing but "the fix was in" and the Bureau backed down. We won in the end, though -the business was sold and the new owners cancelled the license.

As I explained in an earlier posting, one of the obligations in Federal civil litigation is for the petitioner to show that that court has jurisdiction and that the petitioner has standing to bring the suit.

Indeed the FCC took action on their own intitiative, to wit:

The FCC can ALWAYS do so in accordance with their Congressional mandate to regulate the use of the spectrum. You will see

this indicated in documents as "action _sua sponte_" or"action
on [its/our] own motion".

>After the Commission put that ink on the parchment, how hard to do think
>they will fight the keep ITU rule S25.5 afloat.

They couldn't care less, but "Inertia is a Terrible Thing".

I don't think that Hiram P. Maxim would agree that they were an "unruly bunch".

Every radio signal within range interfered with every other radio signal in those days of very wideband spark transmitters, very low noisy frequencies and characteristically poor receive sensitivity, particularly in many if not most homebrew ham recievers. Certainly the QRM sure wasn't intentional, just an artifact of the technology and lack of regulation of the day. As today, hams often transmitted without realizing that the frequency might have been busy,since they often could hear only one side of the contact and that when that side was recieving the frequency would be quiet.

The chaos on radio in those early days can't be laid to the "unruly hams". It was a part of the evolution of radio communication that hams had started.

Marconi always considered himself a ham although he never held a ham radio license.

Dick

I dunno. QFU isn't on my Q-signal list. I've never heard it on the air.

Maybe he's coining a new one. Maybe that's another urban legend.

Ed:

All of which makes me axe the musical question -- What does increasing the technical content of the written exams have to do with testing to ensure proficiency in a practical, manual communications skill? The two concepts are not mutually exclusive. So why, then, are supposedly intelligent and presumably educated people implying that they are?

Ed:

I agree, which is why I now advocate the code tests being dropped altogether. Five WPM isn't fast enough to approach the proficiency which would give a code learner the confidence to try out his skills on-the-air. I never transmitted so much as a "dit" before I passed my 5 WPM test; nobody did, actually. However, it was months of regular on-the-air practice which got me from 5 WPM to 20 WPM -- and that would not have happened without the fun and excitement of my on-the-air experience. And, the better I got at CW, the less thrilled I became at 'phone. I was originally licensed in '81, and by '87, I was pretty much finished with HF 'phone. A particularly henious experience on 10-meters in '91 put the final nail in that coffin! Unfortunately, with a 5 WPM maximum code testing speed, the Morse code learning process starts and stops at the same time. Therefore, what good is the test anymore? The only problem now is to figure out how to retain CW spectrum -- which, in the absence of relevant testing, is going to be a neat trick!

>Or if they don't have your local phone book.

If you travel only in your local area, I don't suggest HF for personal emergencies. Cell phones are the best. However if you're traveling cross country, *by any route*, you can't beat HF for continuous coverage...

Probably the most likely personal emergency need for me would be if I had a vehicle breakdown 50 miles from the nearest town. I have a 1-800 number to call for that, which would be easy to relay on HF if the cell phone was dead. In a real emergency like a serious illness or accident, I would just have the HF ham contact his local authorities and give them the information. They would then make the appropriate calls...

You did hold it to one. This is a variation on a code used by POWs in the
Civil War that supposedly was never cracked. To make it writable, it used
two # and two X. In tap form, it used 4 bits to indicate the box and 9
for position.

I think (or methinks if you like) the key phrase is 'easier to learn' than
Morse. Perhaps my feelers are set a bit tight but escaping a code test
sure seemed to be the object of the game.
Personally, I am getting tired of the whole verstunken debate; providing a
path for the 5wpm contingent to get to journeyman levels is far more
important to the hobby than defending the medium from bleating cattle.

Ed..I'm sorry if you think that my intention is to "tear down" ham radio. I don't want to do that. I just want to make you aware of the present sociology, technology and economics that may result in the "tear down" of ham radio...at least ham radio as most of us would like to see it. Many hams recognize the same problems that I see and are disgusted by the way things are going. I'm not a goody-good. As an engineer and as a teacher I often get people disgusted when I present facts that seem pessimistic...BUT somebody has to tell them that the Emperor is nude. I take such tasks on myself and don't mind being at risk for it.

The fact that ham radio (as most of us know it and want it to survive) is becoming obsolete has been a subject even among the most avid hams. Some have been disgusted since 1951 when the original technician licenses were issued. The idea of ham radio without short wave (HF) was considered a new dimention that polarized the HF hams from the VHF and above ones. Now we are entering a new era. Morse code as a ham requirement is being deemphisized worldwide. Will that get more Technicians to eventually work the HF bands? Perhaps it will. Perhaps some Techs see the hobby as two meter repeater clunking and that is their only bag. The modes and the frequencies that individual hams want to use should not divide them socially...
BUT
Now there are other communicators who can use cell phones and the Internet for fun and games as well as for business and household applications. Lots of hams also use cell-phones and the Internet. DXers are sending QSLs via e-mail and there is a lot of relaying between the medias. This might not mean much to each ham involved but there is certainly going to be a metamorphasis of hams leaving the ham bands for more practical communicating methods which might better fit their needs and take up their valuable time. Can old timer hams truthfully recommend ham radio to youngsters? I would like to do so myself...BUT everytime I try to sell our hobby to an inteligent young potential techie, I find it more impossible.

It has always been my opinion that ham radio can be saved...not just as it is now but as a valuable technical educational asset. To do so ham radio leaders must rethink the hobby. Like an old computer, the hobby needs a lot of up-grading if it is to remain competative. The basis of the hobby must be organized so as to give it NEW purpose. If it sticks to present modes and methods it can not be accepted as an modern emergency asset, nor as an intermittent messanger of international good-will. It is obsolete when comparede to unlicensed communication as well as to the organization of commercial witrless services and the World Wide Web. If the ham licenses are to be given away without real incentives they can hold no value and their holders can thus hold no proof of being a national or international asset.

Once upon a time there were two ham handbooks. "The Radio Amateur's Handbook" was an ARRL publication. "The Radio Handbook" was a publication of the Editors and Engineers. "The Radio Handbook" was labeled: - "The Standard of the Field - for advanced amateurs, practical radiomen, practical engineers, practical technicians". The ARRL was in the north east, but the Editor's and Engineers were westerners and had a somewhat different slant on what ham technology was about. The editor of the latter has very recently passed away. He was Bill Orr, W6SAI. First Lew McCoy...Now Bill Orr...Maybe their passing is a sign of the end of the golden era of ham radio; The time when senior hams were respected for their technical abilities. Bill worked for Eimac and was in tune with the rapidly developing electronic industries of California and the other western states...not just New England, New York and New Jersey. I mention this because even though Ham Radio is National and International, it draws on the progress of hams in different environments, who apply technologies at different rates and have different foresight. If ham radio stops attracting such innovators as McCoy and Orr it will not progress in the coming century. Large corporations will not research and develop any innovative equipment for the dwindling ham population...even some of the Japanese corporations may drop out of the picture. If a new mode of modulation was developed, could it be given FCC approval and widely accepted among hams as single-sideband was in the 50s? There is no Art Collins and his crew at Cedar Rapids, no Collins Radio (It was bought by Rockwell International).

Even if there are capable ham experimenters, can they afford to revolutionize the hobby and bring it up to modern standards? How many world class electrical engineers are now willing to devote most of their working efforts to ham radio? I dunno for sure, but the present trends all seem in the wrong direction and ill conceived.

Hams need more incentives, more license classes, more ham exams...and more respect.

My my, you take a business trip to London for a few days and
return to find major upheaval in the policy department.
Well done ARRL! I disagree with the possibile retention
of a code test for USA, but that's far enough out that I am
quite happy with the change regarding S25.5.

As to my "Sohl" proposal ala QST some years back...I'd not
oppose having some questions along the lines of those
similar to the questions regarding knowledge of the phonetic alphabet.
(e.g. The morse code characters for SOS is: dididit dahdahdah dididit
with other answers being incorrect versions).

>As a code guy, I think it is important that the applicant be exposed to the
>code from the getgo and that he or she be given as much opportunity to learn it
>as other modes. To me, this is probably a compromise position that both sides
>should consider.

I think that will be determined more by the FCC than anything
else. Time will tell.

Again, kudos to ARRL...and thankfully I renewed for 3 years
a few months ago before the now approved dues increase :-)

Cheers,
Bill K2UNK

And just where are those "every state has one" frequencies
posted or found? Part 97? ARRL web site? Is someone
keeping this all a secret?

Minor correction here:  I (I'll speak for myself only) don't see any
value in requiring EVERY ham with an HF license to know
how to use CW on the air.  For those that use CW, enjoy CW,
that is a personal value that I can't and won't argue against.
To each his own.

>But so far they don't keep insisting it's a
>Federal civil rights case, at least on rrap.

Personal opinion follows:  In my opinion, I think a
case could probably be made today on the ADA issue
of code requirments...BUT, I don't believe such a case
would be easily won, nor would it be inexpensive...and hence
I see no point in attempting such nor in argueing pro
or con on that basis.

Actually, Dick, rec.radio.cb was added to this thread by Stewart R Teaze, the person who started this thread. And, I'm sure he added rec.radio.cb because CB'ers are members of the radio community and therefore might have some interest in a discussion about a proposed new radio service.

Of course, since then, it has become very obvious that some CB'ers don't want to be considered part of the radio community, and are therefore not interested in discussions about that. So, I'm sure Stewart R Teaze will take that into consideration before adding that newsgroup to future discussions.

Somebody recently reported that such a case had been presented
to the courts and the ADA won. I certainly don't see any benefit
at all for a deaf person having to learn Morse code unless he/she
simply wants the gigantic challenge of reading Morse code while
looking at an LED or feeling of a speaker in the normally noisy HF
environment.

Yes. And so I have stated on numerous occasions,though that fact seems tohave been overlooked in their zeal to overpower it still, even though it has already been killed. The code test in toto is as dead as the molasses of officialdom will allow it to be, tho it won't totally disappear for an unknown number of years hence due to that very effect. And with the ingenuity of those whose whole intent seems bent on avoiding learning Morse at all costs, even to the poinbt of advocating the "tap code" as it's replacement, the idea of persuading many of them to voluntarily become skilled to useful Morse speeds doesn't seem to hold much realistic promise.

Dick

Like a lot of people, I kind of blew this bit of opinion off.
Deregulation was handled so poorly in CA that a collapse was inevitable.
Nothing new has changed that situation. But the suddenness and ferocity
of the collapse may have indeed been influenced by the New Economy.

	1990	1996	1997	2000
Demand GW-H	240k	258k	250k	300k
Capacity (gigawatts)	55	56	53.6	53.8

Capacity excludes out-of-state and micropower.

What the hell happened? The only thing I know for sure is that Silicon
Valley's consumption has grown at over 8% per year. The man has a point
albeit a fairly small one.

The 'deregulation that wasn't' is adequately summarized in the Economist: "...California reforms are a ragbag of muddled half-measures and downright anti-competitive clauses".

But the man who predicted this whether deregulated or not would have to have a big red S on his sweatshirt.

>I disagree with the possibile retention of a code test for USA, but that's far

>enough out that I am quite happy with the change regarding S25.5.

The Board chose not to change the US policy at this time.

>As to my "Sohl" proposal ala QST some years back...I'd not
>oppose having some questions along the lines of those
>similar to the questions regarding knowledge of the phonetic alphabet.

How would you feel about the test containing 5 minutes of Morse code at 5 wpm, and a reasonable number of questions about its content?

>Again, kudos to ARRL...and thankfully I renewed for 3 years
>a few months ago before the now approved dues increase :-)

I did it after they announced the dues increase, but it is not too late; the increase goes into effect in July. Every time the League raises dues, there is an increase in multi-year renewals. I don't even mind paying the increase, but I would rather make a contribution to something specific of interest to me, like the Big Project or the ARRL Lab Test Equipment fund. :-)

> What does increasing the technical content of the written exams
> have to do with testing to ensure proficiency in a practical,
> manual communications skill?

The rationale, if memory serves, is that the ARRL wanted to see the overall level of difficulty and accomplishment remain the same.

IMHO, the relationship is indirect, at best. OTOH, I believe that testing for an understanding of the technical fundamentals is more valuable to the Amateur Radio Service than is testing about Morse code decoding proficiency.

> So why, then, are supposedly intelligent and presumably educated people
> implying that they are?

You tell me, Larry; I am sure if I did a deja search I would find you stating that Morse code testing is required because the written exams are "easily" memorized, or otherwise inadequate.

I think he should have been grandfathered and just given one. I don't think, however, that his code speed would have been high enough that he could have been allowed on more than the Tech+ bands on HF.

>From: "Richard McCollum"

>I think (or methinks if you like) the key phrase is 'easier to learn' than
>Morse. Perhaps my feelers are set a bit tight but escaping a code test
>sure seemed to be the object of the game.

If that is the object of the game, the game has been lost. If legal, it can be used on VHF by those who have not passed a code test (so can Morse code), but to use a digital mode on HF, under the present rules, one would require a Technician license and the HF endorsement granted by passing a 5 wpm test.

> providing a path for the 5wpm contingent to get to journeyman levels is
> far more important to the hobby than defending the medium from
> bleating cattle.

If those of us who enjoy Morse code want to see newcomers use and enjoy the mode, too, you are quite right -- ways of getting people from 5 wpm to higher speeds are pretty important.

I am NOT impressed with the methods being used. To the contrary, I believe that the anger, the bitterness and the name calling that is being done by some to "defend" the mode is setting the stage for failure. Telling newcomers that Morse code is a difficult task that will test their character and help keep the riff-raff out of ham radio will not send a message that this is something they can use and enjoy. A message that explains why it is enjoyable, why it is effective and letting them see love of the mode in your eyes and in your words will be much more likely to gain converts that much of what I have seen here.

I think most of us realize that, sooner, or later, the Morse code requirement for testing will either be dropped or significantly changed. If it is, many of those things that are being said right now by people who claim to be Morse code proponents will be more likely to keep people away from the mode than to encourage them to use it. Think for a minute about what you will say to encourage new hams to use code if the code test is no longer part of the the requirements. THOSE words are the ones you should be using right now, to the large number of hams who have not yet passed a code test and to the ones who have passed a code test, but are not yet trying out the mode. I have seen the collective memory of the Amateur Radio Service over incentive licensing. Over a quarter of a century later, the ill will still echoes in our circles. Don't doubt for a minute that this next generation of hams will remember what was said today, whether they have to remember if 3 years hence, or 10.

Those who really want to preserve the use of Morse code on the ham bands should be encouaging new hams to give it a try. They should be forming slow-code nets, and looking for those 5 wpm CQs and giving them a nice QSO and some affirmation that this is a fun mode that will bring value and enjoyment to their use of it. Where are these things? Has ARRL done them? Has FISTS? Have you? All I see by those who may think they are "defending" Morse code is posturing and name calling. IMHO, taking real steps to get people from 5 wpm to what you term "journeyman" levels is more valuable than the use of the term "bleating cattle" on rrap.

I noted in the ARRL Board minutes that the Board has directed ARRL HQ staff to take steps to promote the use of Morse code on the bands. At this point, I don't know what those steps will be, nor am I sure that ARRL will actually pull this one off, but I sure intend to offer my input to what may be needed to make that happen. Although at this time, I have a very short list of what will help, perhaps the first thing on the list is to drop all the name calling and bring back the fun.

Morse code use on the bands has not been killed at all, Dick. Are you really trying to destroy is just to be "right" in this debate? If so, you are wrong.

> the idea of persuading many of them to voluntarily become skilled to useful
> Morse speeds doesn't seem to hold much realistic promise.

If you really are giving up, perhaps you could stand back and let those with a more positive outlook take over from here. Your choice of words is really trying to hasten the demise of my favorite mode. I disagree with you that Morse code use is unable to stand on its own merits.

The SSB County Hunters and Mobile Emergency net meets daily and continously when the band is open on 14.336 MHz. The CW net meets on 14.0565, but the operation is a bit more sporadic. If I had a mobile emergency, I would break the 336 net and be pretty confident that someone would have good propagation to me and would ensure that I got help.

I thought it was the ARRL that picked the beta-testers of the band, so
it would be the ARRL that lets the rest of us on it.  I stand corrected.

;)

Ed:

I think you're thinking about Lee DeForrest. Marconi was a proficient
CW operator. I don't think DeForrest ever knew the Morse code.

Ed:

I agree with the above, but there's only one problem -- it is the people who were AGAINST code testing who were making those claims! All of the anger, bitterness, and name calling was started by those who sought to avoid code testing by discrediting those who were in favor of it on the basis that they were being mean-spirited and not being "inclusive" in their attitude toward newcomers to ham radio. The touchy-feely, politically-correct liberals whined, and the League, the equipment manufacturers, and the ham radio publications took up their cause, because they knew on which side their bread was buttered -- or so they thought!

>A message that explains why it is enjoyable, why it is

Which is exactly the message the pro-code test people have been giving all along -- in addition to largely ignored offers to assist people in learning the Morse code. The problem is -- nobody wants to make the required effort. A classic "You can lead a horse to water, but you can't make him drink" scenario. Just what exactly are the Post-Restructuring numbers of newly-licensed hams with a General or Extra ticket?

>I think most of us realize that, sooner, or later, the Morse code requirement

No, Ed, what will keep people away from Morse code is the necessity to learn it and practice it enough to gain operational proficiency. In other words, the same thing that kept people away from it all along.

>Think for a minute about what you will say to

>their use of it. Where are these things? Has ARRL done them? Has FISTS?
>Have you?

Yes, Ed, I have! As usual, participation is practically nil. Everyone who was interested is now "grandfathered" to the Extra-class due to having passed a 5 WPM test years ago; and they're all on HF phone with a vengeance.

>All I see by those who may think they are "defending" Morse code is
>posturing and name calling.

That's funny -- that's exactly what I've seen coming from those who were seeking to reduce/eliminate code testing requirements!

> IMHO, taking real steps to get people from 5 wpm
>to what you term "journeyman" levels is more valuable than the use of the
>term
>"bleating cattle" on rrap.

No, Ed, what would have worked was a willingness of those who wanted HF licensure to make the effort to learn and gain useful proficiency in Morse code -- as opposed to their incessant, cattle-like bleating about how learning a useful communications skill was inhibiting the development of high-speed digital modes, etc, etc, etc.

>I noted in the ARRL Board minutes that the Board has directed ARRL HQ staff
>to
>take steps to promote the use of Morse code on the bands. At this point, I
>don't know what those steps will be, nor am I sure that ARRL will actually

>this one off, but I sure intend to offer my input to what may be needed to
>make
>that happen. Although at this time, I have a very short list of what will
>help, perhaps the first thing on the list is to drop all the name calling and
>bring back the fun.

Ed, I've never done any "name calling" except within the confines of the small, closed society of Usenet. My in-person behavior to prospective ham radio newcomers has never given anyone any cause to reject the notion of learning the Morse code. In every case, once these people found out that learning this skill would require a serious commitment and genuine effort on their part, they disappeared in droves -- only to show up on the VHF/UHF repeaters praying for some "ducting." So, one of the first things you'll have to come up with is some way to overcome the natural laziness of people who just want to get a microphone in their hot little hands and start talking!

The only thing that kept the CW mode alive as long as this was the
REQUIREMENT to learn it at levels which lead to operational proficiency.
In the absence of that requirement, the mode WILL die. And no amount
of blowing sunshine up people's asses will change that. The problem
is called LAZINESS. That's what you're up against. Good luck.

Ed:

I'll betcha a lobster dinner you can't! I've never said that there was any
direct relationship between code testing and written exams. I've
always said that the two were separate and equally important tests,
and that I supported the updating of the written exams, including a
change from the short-term memorization paradigm now so common
today. However, I've also said that the written exams were appropriate

for an *amateur* radio license examination (emphasis on the word
amateur is important). If you can find a quote from me where I
clearly state that the written tests were directly related to, and could
serve as a replacement for the code tests, you've won a second
lobster dinner from me!

Nope, I predicted it over 20 years ago, in a column regarding the anti-powerplant folks and their move into the California Legislature.

You can't get electricity from a generator which wasn't built. More people means more need. Economic expansion means more people AND more commercial power use, but the Neanderthals in Sacramento made it all but impossible to build capacity to follow the increase in need.

Your computer has about the same current drain as the one you had 10 years ago -- the rough equivalent of running your living room lights -- AND today's computers are "energy aware," dropping consumption during periods of non-use. While there are a few more computers today than a decade ago (most systems sold are replacing existing hardware, and the older machines are not being re-used), there are not enough to cause a major shift in consumption patterns.

Of course, he's lying.  At least from my perspective, having worked my
way through school in manufacturing plants and now being involved with
computers.

The answer can be summed up in two words: Code Quick!

The web site is:
http://www.cq2k.net/

Too bad there hasn't been a review of Code Quick in QST. It's also too bad that Code Quick isn't better well known or better well promoted.

Code Quick may be silly, cutesy, and over-the-top, but it WORKS!!! I challenge you to find anyone who will say, "I really, really tried, but Code Quick didn't work." (That's right, none of the Code Quick critics actually used it.) Then compare the failure rate of Code Quick to the failure rates of the more conventional methods (Koch method, listening to Code tapes, memorizing dits and dahs, listening to Morse Code and expecting divine inspiration to take over, etc.).

If you don't believe me, just search for "Code Quick" on eham.net, deja.com, and other sites.

"Separate and equal", eh? Why do you consider Morse code skill as
important as everything else in amateur radio combined?

Seems to me Morse code skill may be around 5% of what amateur radio
is all about. Seems Bill's and Ed's idea would work very well if
5% of the written exam was on Morse code skill.

People who were AGAINST code testing said that Morse code builds character
and keeps the riff-raff out of ham radio????? Give us an ever-loving break,
Larry. What an absolutely ridiculous assertion.

> >A message that explains why it is enjoyable, why it is

"Know code = know ham" gives that message????? Shirley, you jest.

> Ed, I've never done any "name calling" except within the confines of the
> small, closed society of Usenet.

Larry, Usenet is read world-wide by a large number of potential hams.
You have reached magnitudes more people on Usenet that you will ever
reach in person or over ham radio. You cannot possibly undo the anti-
Morse sentiment that you have caused.

> The only thing that kept the CW mode alive as long as this was the
> REQUIREMENT to learn it at levels which lead to operational proficiency.

I do not believe that is true, Larry. But if it is true and CW cannot
stand on its own merits without governmental welfare support, then it
deserves to be laid to rest in the sands of time. I believe CW will
endure because it has merits, the ones that you believe it lacks.

OH YA!

I had the opportunity to test one out when a school chum brought one into the electronics class. I suspect that any grunt under E3 would have ditched such a contraption on the first march. I thought much more horsepower than 40 watts worth was being lost to the tube filiments and gearbox and grease losses.

About the same time, one of the kid Novices (campus ham club) homebrewed a bicycle mounted QRP station that really worked The generator would keep the NiCads up between stationary CW ops. The 10 mile ride to and from school could just about do it.

I imagine that you could get a lot more efficiency today out of the manual generator. Not very practical for the rubber raft, but where would we be if the power grid went south for a month or more? For stationary power generation, wind and hydraulic are doable on a small scale, very cheaply with rewound alternators and such. One such contraption out of Pop Mechanix had a wind turbine made out of an 80 gal oil drum cut up like a rooftop vent turbine and spun on a wheel bearing. It drove a rewound car alternator to keep a battery topped off. About 90 miles east of here, is a vast array of wind turbines that catches the wind as it funnels through the pass just this side of Palm Springs, CA. It probably won't pay for itself, but it does put power onto the grid.

"Separate but Equal?"

Lemme see, if CW gets 5% of the written, and RTTY gets 5% of the written, and AM gets 5% of the written, and USB and LSB each get 2.5% of the written, and SSTV gets 5% of the written, and NBFM gets 5% of the written, and FSTV gets 5% of the written, and Packet gets 5% of the written, and psk1 gets 5% of the written, and msk...

We're already at 50% of the exam and haven't touched rules or
authorizations, let alone safety.

Code Quick probably works well at 5wpm. I could be wrong, but seems to
me, it wouldn't work above about 15wpm and would actually limit one's
maximum code speed.

Well, I would only allocate 5% to SSB, FM, and CW. The less popular
modes would be allocated less than 5%.

w1rfi@aol.com (W1RFI)
shared these priceless pearls of wisdom:

->How would you feel about the test containing 5 minutes of Morse code at 5 wpm,
->and a reasonable number of questions about its content?

Ed...

As you know, I'm a proponent of the elimination of code tests overall, except perhaps the one that is of some practical use like the ASCII code {;-)

HOWEVER, if there is great feeling that somehow Morse Code is a relic to keep holy, then the 5 wpm should be straight text out of the newspaper or a schoolbook. Learning the code and then all the arcane jargon that is used in hamspeak at the same time is a rather daunting task. And yes, I'll run my college "RF Communications 101" class again this summer and yes, I'll teach the stupid code, and yes, I'll infect my students with the "this is stupid to have to learn" attitude. Perhaps if I can turn out enough students that will percolate to positions where they can do something about it, change will happen.

In politics, this is called the "septic tank principle". Most of the $#!+ flows down, but the really big chunks float to the top!!

Are you going to use published questions and
 answers here too? Then you could pass the test
 without knowing  the code and the written material...  :-)

>I don't even mind paying the [dues] increase, but

CW Antennas are just fine...

CW does have some relationship to antennas. Cannot antennas be optimized for use in the CW band segments, so...

I'd like to see designs for CW optimized yagi's and such...

-Peter

Dog did it. Hmmm, starts with the word dog, and dog starts with the letter "D" so it must be a d. Heck of a look up table you have to carry around in your head.

Thank God we only need 5wpm anymore.

Two major problems, first a very faulty deregulation law. The second is a decrease in generating capability during a rise in demand.

Deregulation has caused the power companies to go so far in the hole that the only reason they are getting electricity from the grid is through executive order. This ends in two weeks. The suppliers are afraid they won't get paid.

The environmentalists have done a really good job of blocking any new plant construction as well. In short California has created their own problems, I say let them stew in their own juices. Maybe they can get the Clinton fund raisers to raise money for the ailing power distributors. 8>}

Personally, I feel, anything that happens to the fruits and nuts on the left coast is well deserved. Turn off the klieg lights at the porno film studios, the heaters at the faggot bath houses, and there will be plenty of electricity.

The QRP community has been discussing the need to incorporate 5 wpm hams into
its ranks, and some have started some fun 5-10 wpm operating events.  Looks
like they are leading the way.

I am sure that the way I learned code wouldn't work above 15 wpm, but it didn't seem to limit my maximum code speed to 14 wpm.

To those whose primary reason for learning the code is to get their HF priveleges, Code Quick is as good a way as any.

> Your computer has about the same current drain as the one you had 10 years ago -- the rough equivalent of running your living room lights -- AND today's computers are "energy aware," dropping consumption during periods of non-use. While there are a few more computers today than a decade ago (most systems sold are replacing existing hardware, and the older machines are not being re-used), there are not enough to cause a major shift in consumption patterns.

Still begs the question: where did a 25% increase come from in 3 years after 7 of flat demand?
I have no doubt that you predicted it 20 years ago -- a simple extrapolation at that point in time would have done the job. As Peter Drucker once pointed out, had Rip van Winkle done his 50-year sleep act in 1913 leaving a 50 year extrapolation in his pocket, he could have looked at it in 1963 with great satisfaction, two world wars and a major depression not withstanding.

Using some QD estimates, 50 gigawatts is not enough capacity at 250 terrawatt-hours annually let alone 300 and probably does not even meet baseload today. This has been brewing awhile, no doubt about that. The village idiot is not going to let the legislature off the hook.

Also agree that home compooters are not a good blame-sink either. Servers, memories, etc. might be a piece but it is hard to see them as all of it.

I suspect that going back further and correlating to such things as population would give one a far better analysis which could not have been politically sold given the 1990-1997 experience in any case.

Still, where in hell did the increase come from - or as I suspect is the case, what is so odd about 1990-1997?

Dick

Do you believe that full-carrier, double-sideband AM and OOK CW using Morse
encoding are both 5% of what ham radio is about? Why would you think a mode
that is operated by only a couple of percent of hams is equal to one that is
used by about 1/3 of hams?

The ARRL may indeed have selected those that are using the band right now, but
it is not the ARRL's place to decide that everyone can use it.

Are you interested in being one of the beta testers? I can find out if there
are any "openings."

QFU is in the series assigned to the Aeronautical Services -
that series does not appear in the ITU Radio Regs so I don't
know its exact (legal) meaning. The "de facto" meaning is
obvious.....

Anyone have access to the ICAO Regs?

Totally irrelevant, because the Maritime Distress System no longer uses Morse signals such as "SOS" and in any event, it never properly belonged in the Amateur Service, only the Maritime Services using manual Morse telegraphy.

I would rather see questions on "good operating practice".

Top ten signs you're staying at a racist, Hiram hotel

10. Their slogan is, "We'll leave the WHITE on for ya!"

9. First tip-off: Those Confederate Flag pillow cases.

8. Sign in the lobby announces: "Pat Buchanan Rally This Saturday!!!"

7. Sign behind the front desk reads: "You're damn right we're open on Martin Luther King Day!"

6. Sign above the beds reads: "Absolutely no HIP-HOPPING on the mattresses!!!"

5. Sheets and towels already have eye-holes cut in them.

4. No rating by the AAA. . . but 5-stars by the KKK.

3. Bible on the nightstand replaced with a copy of "Mien Kampf".

2. Instead of a "Presidential Suite" they have a "Grand Wizard Suite".

And the Top Sign You're Staying at a racist, Hiram Hotel. . .

1. Every morning the front desk will give you a "wake-up slur".

The fact still remains that there is NOT any set freuency where
a ham can be reasonably sure that other hams are monitoring.
That is the bottom line. Ironic too that CBers maintain channel 9
as an exclsuive safety/emergency channel.

Cheers,

Got to get to 5 wpm before 15 wpm. What's really the magic of code quick is
that it allows your to PASS the 5 wpm and demonstrates that anyone CAN learn
CW!!

Hey once I passed 5wpm I too began to learn the farnsworth method it was
easy know I had a good foundation having use code quick

Web

I'm sure I wouldn't be qualified as has been pointed out every so often.
```

Perhaps the ARRL News Letter will soon mention how the beta testers are
doing.

I think it is as valid as the "how long does a SSTV image take to
transmit" question. I think Cop McDonald is the only one who knows that
one.

Bruce/WA8ULX used to claim that he was going to destroy the ARS because
the restructuring wasn't going his way. Unfortunately, the mold wasn't
broke on Bruce.

Never heard of a Grand Wizard. Grand Dragon yes. He reports to the Imperial Wizard. Who is the top banana. But, thanks to Morris Dees, the organization is so fragmented now, there is no telling what new wrinkles have been added.

You got that right Richard, I was afraid I had stuttered and you didn't get
the message. Once more with feelings, California liberals and their ilk
passed legislation that had no chance for success. Don't blame me, you could
not pay me to live there if you put the mint on a three shift day.

>I thought the idea was to be "equal" with the other modes.

It is. The testing for the other modes is somewhat related to the relative importance of the mode to amateur radio.

If you think I was saying that all modes must be tested in equal percentages, you misunderstood.

>I'd have mixed opinion. It really isn't needed anymore and
>that's pretty much the bottom line.

Morse code is still in widespread use in the Amateur Radio Service, Bill; that alone is, IMHO, sufficient reason to have some testing related to its use. A decoding test is a long-time traditional way of accomplishing just that. The way it is being done today, however, sets Morse code decoding at a level equal to all of the other material hams must know. Doing what you and I have both suggested at times, with the questions about the content of the transmission being part of the overall exam, is a reasonable way to balance the need vs the testing.

I just read an op-ed piece in the Jan 29 issue of U S News and World Report newesmag on this very subject and came away with a bit more sobering knowledge on the subject, stuff you'd really rather not know, or more accurately you'd rather wasn't so.

In a singlepage article entitled "The Price Isn't Right - it's easy to forget there's no such thing as a free download" a fella by the name of Randall Stross, who lives in that area writes, and I quote:

"...Does California's pitiful state seem due comeuppance for our annoying tendency to lay claim to the future first? From afar, does our degregulation mess seem comfortably distant from your own doorstep, or precisely from your own power outlets? Do you still believe in Reddy Kilowatt?

"Having just suffered through a temporary blackout here in Menlo Park, Ca I am tempted to join in local demands that the thievin' power gougers be brought to swift and rough justice. Yet I confess to feelin a twinge of guilt. For I personally contribute, in sundry ways, to the mismatch between electrical power supply and demand.I believe you too, dear reader, are culpable and will eventually be affected. Not because of the regional reach of the Grid and California Governor Gray Davis's (literal) power grab; and not because you may reside in one of the 25 other states now considering energy deregulation.

"Rather, the California crisis is larger than it may at first appear because it exposes a universal fact that has been overlooked: On our way to the digital future, we have been enjoying a free or near-free ride, a form of transportation that, regrettably, exists only in the land of makebelieve.

"In the news coverage of the crisis, much attention has been devoted to prices, narrowly defined as the mismatch between the newly unregulated wholesale price of electricity and the still-frozen retail price. Left ignored is other pricing that contributes to the present imbroglio: Flat rates for monthly Internet access and cost-free downloading of gigabytes of data, a combination that means the household that gobbles data like a University of Nebraska lineman in the college cafeteria pays no more than the Joffrey ballerina who only nibbles.

"The cost of maintaining websites...is absorbed by the site sponsers which
pay other companies to maintain "server farms". These are concentrated in Silicon Valley. A single such data center occupies the space of a modest office building but consumes the power of 10,000 single-family homes. Exodus Communications, the company which takes care of eBay and Yahoo! among other, has six data centers in just Silicon Valley, which will soon draw an estimated 25 percent of the area's power. (Remember,

this is a state that hasn't built a major power plant in more than a decade).

"Feeling virtuous because you're careful to shut down your home PC every night? It's a laudable gesture. But the desktop PC consumes only 20 percent of the power used by the Internet. Add up the costs of running the routers, caching pages, cooling the equipment and so on and you'll find that to create and move 2 megabytes of data over the Net is said to require the energy
equivalent of a pound of coal.

"The Internet, that bucket brigade transferring data around the globe, sprang up without a master plan for commercialization, and there is no simple way to make heavy users pay the true costs. The famous 1954 prediction of Lewis Strauss, chairman of the U S Atomic Energy Commission, that electrical power would be "too cheap to meter" has not come to pass. But as consumers, we can take as large a byte of the Internet's vast offerings as we wish without having to pay a charge related to the volume of data ingested. Insulated from the costs, Web surfers will naturally enough take due advantage, heedless of what economists refer to as externalities, or the costs that someone else has to pay (or an entire city of someone elses, as when the next rolling blackout instantly makes San Francisco look like Lagos.)

Unlimited Internet access for a flat monthly rate is a luxury that Web surfers in most European countries do not enjoy. It is not directly responsible for California's energy shortage. But the mentality that it reinforces, that using technology carries no marginal cost is plain wrong. Only five years ago AOL still charged its members on an hourly basis. Reluctantly, the $20 a month flat price set by independent Internet providers forced it too to move to a flat-price model. AOL then weathered an embarrassing breakdown of tis dial-up systems when users gorged themselves on the unmetered service.

At the time of the change, AOL head Steve Case sent an E-mail asking that members "moderate" their use at peak evening times during the transition. ("Just as you would be sensitive about using a public phone booth if there were others waiting in line") In just two days, his plea drew 17,000 messages from irate members, livid that he was hedging on the "unlimited use" bargain.

That, in microcosm, is the larger problem we will face as a society at some point: how to moderate use of energy-gobbling resources to which we currently have nearly unlimited access. Who would prefer the intricacies of cost accounting to the all-you-can-eat buffet? No one. That is, until the lights go out."

End of quoted material

Oh, I don't know. He made a bunch of longrange CW contacts if you
recall. Also as has been belabored here so often, the code test early on
was at 5wpm.

For the record, I have never said the Morse code
exam was an ADA issue.  I agreed with the FCC medical
waiver decision because the code test was not a valid
requirement; however, the decision was a technical
judicial error in that it did not waive the test for all, and
instead created more discrimination.  Discrimination
by government are can addressed by "due process"
and does not always require ADA or Civil Rights
Act remedies.

I further believe that the FCC has dealt fairly with the
issue presented to it in the 1990 Codeless Technician
Decision and 1999 License Restructuring Decision.
And, I further expect the Commission, when presented
with the ITU rule S25.5 issue, will deal with it in a
fair and proper manner.

See, Ed?  I told you it was legal! You can't depend on a codefree ham
like Brian  for dependable information about radiotelegraph operations.

No, Bull, the "fact" is that in an emergency situation, it is normal procedure for anyone involved or interested in the emergency to repair to the State emergency net frequency. I wouldn't expect you to know that, given that you don't actually have that much experience in ham radio.

There are other frequencies generally active on a routine basis that are available for emergency service on an ongoing basis. The Eastcars and Westcars mobile service SSB nets on 7255, and Midcars on 72587258 are still active, at least Midcars is, as I sometimes monitor there. Most any repeater can be used as emergency comms, if only you can get anyone to answer your call. Then there is the Maritime Mobile Service Net on 14.313, if there's anything left of it these days after the trashing it got by thugs a few years ago and since.

But, of course, you're right - there is no "frequency" that is singularly monitored for emergency purposes. Instead, there are many. But you've got to know enough about it to know where to look.

Gee, I've always considered that "deregulation" was the darling of "conservatives" who didn't want "the gov'mint" setting caps on profits and interfering with their business endeavors by telling "industry" what to do.

Foolish me....must have been us "liberals" all along, eh? FDR must be spinning in his grave.

It's quite clear that Bill has no use for ham radio for anything other
than just a very occasional, causual passtime, and thus he truly
believes that no one else does or ever has had, either. He evidently
doesn't read much or just ignores the emergency columns in all the mags
that have published reams on such activity by hams for far longer than
he has had a license.
But I guess that would be the attitude one could expect from a fella
who has very little actual interest in the hobby, and being employed in
a commercial communications endeavor he surely wouldn't advocate hams
handling serious traffic in competition.

Phil, that was the problem in a nutshell. "Liberal Deregulation", in which the retail price is strictly controlled so as to definitely never offend a single voter by causing him to have to pay actual costs (until the lights go out, anyway) but unfortunately they forgot that they couldn't control the prices charged by all those out-of-state suppliers! Evidently they just closed their eyes and hoped the ship would hit the sand so far in the future they'd be off the scene when the recriminations started...

The KKK is alive and well. Recruitment is active all over the country (a friend was approached in Washington state and I've heard of recruitment around here). All Dees did was drive the KKK underground (into cell-like groups), which probably makes it more dangerious.

Reaganesque degregulated supply + FDR-style price controls and cost supports + the need for Sierra Club stamps on building permits = Deal with the blatently obvious results.

>

In the end, five-ten years out when reality is imposed amidst great howls of protest and anguish over actually cutting down trees to build generating capacity the Leftist Coasters will be paying 15-20 cents per kwh like us smokestack-loving fully-deregulated Fascist Coasters have been doing for eons. That's the real bottom line, pay for what the amp hours actually cost to deliver plus some (wash my mouf) profit or the lights are gonna go out. Not a palatable concept in places where a primary purpose of gummint is to protect consumers from reality, pore things.

>

Not that I actually believe it of course but our incarnation of Davis claims that deregulation saved PA consumers $2.18 billion last year. We also have *mothballed* generating capacity as a result of the profit-driven environment which got dropped on us and them a few years back. The 'lectric company here made money on excess capacity back then thanks to the foibles of regulation and now they can't so they took the excess capacity offline real quick but it's still out there.

Nevermind that even the professional emergency communicators have
abandoned code long ago. If you like, I'll dig out the website where
you can listen to the last holdout, the US Coast Guard's last CW
transmission.

If you want to get saved, you'll have to learn to use phone.

There is a single HF frequency that is monitored extensively for emergencies,
Dick, at least while the band is expected to be open. Of course:

I didn't mean to imply that he didn't know the code. I don't know if he knew the code to 20 wpm when he did those early experminents. Seeing as this was before April 15, 2000, shouldn't he have done them above 50 MHz, where he belonged? :-)

I have to wonder, if the 5 wpm code test was enough to get Amateur Radio off to such a flying start (looking at the resultant growth), why is it looked upon with such disdain by some today?

Sounds like the antiques in the old 20th Air Division, Air Defense
Command, SAGE Blockhouse at Ft Lee AFS, VA. I had to forecast

probability of lightning so we knew when to switch off the commercial
power and start up the diesels. Couldn't let the AC stop or we would
burn baby burn!

Bombs on Target!

Larry Roll K3LT wrote:
> Five WPM isn't fast enough to approach the proficiency
> which would give a code learner the confidence to try out his skills
? on-the-air.

What I think Larry may be trying to say is what I call the �fun �

factor�. CW communications can be conducted at any speed, low or high. The unfortunate truth is that the amount of fun you have conversing with CW is proportional to the speed you can comfortably clip along at. When incentive licensing was based on stepped CW proficiency requirements, there were two forms of inspiration for a new 5 wpm Ham. There was some level of fun (and frustration) obtained by using the code, but also there was the carrot hanging in front of him to upgrade to higher class of license. Now that the �upgrade� carrot is gone, there is less incentive for a 5 wpm Ham to stick with using CW long enough to reach a speed where the fun � factor can really kick in.

A second problem will be the loss of the �kiddy pool�, otherwise known as the novice band. The Novice CW band allocations are essentially empty now and will soon go away. During their hay-day, they were chuck full of hams pounding away in the 5-13 wpm range, all working hard to improve their CW skills. It was easy to find someone to talk with and it was only respectful for accomplished CW operators to slow down when visiting there. The new CW operator today does not have this warm shallow water to splash around in. He is thrown into the deep end of the pool and told to start swimming with the big fish. Would anybody be surprised if the percentage of new hams that grow to love CW is significantly less compared to when there were support mechanisms built in to help him along?

I look to specialty clubs to step up and save the day for CW. It is clear that the code haters have won the day and regulated CW mandates are soon to be history. Clubs like FISTS should set aside frequencies in the CW sub-band via gentlemen�s agreements as protected waters for new CW operators. They should slow down and help the new CW Hams along. If it were generally known that the new CW operator could find personal support on the bands, then CW would have a brighter future.

Roll over? No Dick, we expect to see you throw yourself down on the
floor and spin in circles all the while kicking and screaming. Every
once in a while, you'll check to see if anyone is still watching.

I've just stopped watching.

See you all tomorrow.

>wpm Ham.

Incentive Licensing was never _based_ on stepped CW proficiency requirements. The purpose of Incentive Licensing was raising technical proficiency (see Docket 15928). The stepped CW requirements that were a part of the existing license structure were a byproduct of the Incentive Licensing idea, not the basis for it.

Jeff Goodspeed wrote:
> What I think Larry may be trying to say is what I call the �fun � factor�. CW communications can be conducted at any speed, low or high. The unfortunate truth is that the amount of fun you have conversing with CW is proportional to the speed you can comfortably clip along at. When incentive licensing was based on stepped CW proficiency requirements, there were two forms of inspiration for a new 5 wpm Ham. There was some level of fun (and frustration) obtained by using the code, but also there was the carrot hanging in front of him to upgrade to higher class of license. Now that the �upgrade� carrot is gone, there is less incentive for a 5 wpm Ham to stick with using CW long enough to reach a speed where the fun � factor can really kick in.

A very well reasoned viewpoint, Jeff. For me, I don't think the fun factor was really related to any absolute value of speed. The frustration factor was more related to how many mistakes I made, or how well I could copy the other station. This is true at any speed I think. My change in speed as I learned was almost imperceptable to me. The sense of speed was and is a relative thing. If the other station is sending faster than the speed at which I can copy, it seems fast to me. But as long as he's sending at a speed that I can copy, then I'm comfortable and happy with it. It's fun. If I can't copy it, it's not so much fun. I've never felt that I had to get out so many words per minute or it wasn't worth my time. The fun was just in doing it. For those who feel they have a time constraint on their operating, then one of the other modes would probably be better suited to their needs.

I think your point about the "kiddy pool" (for lack of a better expression) is well taken. I've noticed that QSO's on the FISTS frequencies are generally at a more leisurely pace. I like your idea about perhaps expanding on that.

Nice post, Jeff.

Ah HAH!!!  The truth comes out!  The ARRL (through their Usenet
spokesman, W1RFI) supports the concept of using inefficient,
speed-limiting methods of learning the Morse Code strictly for
the purpose of expiditing the granting of HF (phone) privileges!
More "dumbing-down" from Newington!  What else did we expect?

My choice of words is telling the truth, as it always has. If you are
so adamantly "Pro-Code," why didn't you support it by insisting on
retaining the status quo in testing requirements?

>Ditto for me. QRP interest is on the rise.

Is that among currently licensed, already CW-using hams, or
among new hams, recently licensed, and who just learned CW
for the sake of accessing the benefits of QRP operation? I'm sure
that if the truth could be known, it would support my arguments,
not yours. Mine are based on reality; yours are based on
dreamy, politically correct wishful thinking!

Jim:

Why did people with a 5 WPM Novice/Tech ticket get on-the-air?
Did the fact that they were also staring a 13- and 20-WPM code
tests in the face have anything to do with it? It sure did for me,
and everyone else I know -- except those who find it easy to deny
reality here on Usenet! Keep deluding yourself, OM -- you're
getting good at it, and I'm sure it brings you some comfort!

That's promising and encouraging. It indicates that Code Quick isn't just teaching something that you have to unlearn to progress to higher speeds.

Yes, but it it worked for you in that way it will do so for many others as well.

Dick

Lets see, now, there are hams in the USA numbering near 3/4 million, scatttered from coast to coast, border to border, and that ignores an equal or greater number scattered 'round the world. If you really think it might to be possible to gather them on a single frequency or to even agree on what frequency they might gather on, you're dreaming. I've been active virtually continuously for 44 years and never had to wonder where to go when an emergency struck. Done it a number of times. Have participated in lots of emergency and earthquake simulation drills overthe years on some of those frequencies.
Just what DO you discuss in your RACES planning?

Dick, in many areas of my life, a positive outlook has accomplished things I would not have believed possible.

>> I disagree with you that Morse code use is unable to stand on its own
merits.

> You lose.

What does this mean? Are you saying that you don't think that I believe that Morse code is able to stand on its own merits, or you affirming that you believe that it is not able to stand in its own merits?

I truly don't understand what you are trying to say with "you lose." Can you explain what it means to you so I will know what it means if you say it again?

Another example of a pro-code-test advocate feeling a need to tear down the mode in order to defend it. :-)

I made a world of 5 wpm QSOs when I first started, then 6 wpm QSOs and 10 wpm QSOs and kept on going.

The QRPers are doing some really cool things with their "fox" hunt events, with a slow-speed HF foxhunt once a week.

I think Cecil was telling us that he believes that some of the 5 wpm Generals will advance their code speed past the speed at which they were tested, like Cecil did with his 5 wpm Novice, or like I did with my 13 wpm General.

Some people don't think Morse code is good enough to attract users.

Larry Roll K3LT wrote:
> Why did people with a 5 WPM Novice/Tech ticket get on-the-air?

I think probably for the same reason that any other ham radio operator gets on the air.

> Did the fact that they were also staring a 13- and 20-WPM code
> tests in the face have anything to do with it? It sure did for me,
> and everyone else I know -- except those who find it easy to deny
> reality here on Usenet!

That's not the point you made in the previous post, or the one to which I responded, Larry. Here it is again so you can keep your thoughts straight about it:

"Five WPM isn't fast enough to approach the proficiency
which would give a code learner the confidence to try out his skills
on-the-air."

I disagree that a lack of upgrade incentive makes the above a true
statement.

> Keep deluding yourself, OM -- you're
> getting good at it, and I'm sure it brings you some comfort!

I was thinking the same thing about you, OM.

>I look to specialty clubs to step up and save the day for CW.

Some of the specialty clubs, like the QRPers, are doing just that. The ARRL
Board has just issued a mandate to HQ staff to identify ways to promote Morse
code use on the air.

>It is clear that the code haters have won the day and regulated CW mandates
>are soon to be history.

Some who believe that Morse code testing need not be a part of amateur testing
are far from code haters.

>They should slow down and help the new CW Hams along.

This will be the number 1 way to encourage those who are being licensed today to try out those Morse code skills.

>If it were generally known that the new CW operator could find personal
>support on the bands, then CW would have a brighter future.

Some here who may believe that they are "helping" the mode survive ad not making newcomers feel like they will find personal support on the bands. Unfortunately, there is not enough on the bands to really make that happen, either.

The step from Novice to General contained a code-speed incentive from Day 1.

In the days when a General had all amateur priveleges, the technical step you mention was just as much a part of the structure of the licensing of the day as was the code-speed step. Both were made part of the incentive.

I don't see that you've disagreed with Docket 15928, Ed, which plainly indicates that Incentive Licensing had to do with addressing technical proficiency. Further, the reason IL failed

is because hams weren't grandfathered to Extra from General. That
was the complaint; not the difficulty of Morse.

So did I, and according to Larry, so did he. How he figures nobody
would operate at that speed I'll never understand. Selective memory
perhaps. My first CW QSOs were on my old 2 meter IC 211 - at sub-5WPM
speed - when I was a Tech.

Having knowlege of the Morse letters and numbers when they are being
licensed is probably helpful in that way also. Am I wrong?

I'm pro-national defense, pro-military, but I don't advocate conscription at this time. Does that now make me anti-military?

I was very happy just being a Novice in 1951. I was having so much fun as a Novice, I completely forgot about the expiration date. The only reason I got a Conditional was to be able to continue to use CW on the Novice bands. The increase in my CW speed happened automatically without me really trying or thinking about it.

How you can say yours are based on reality is beyond belief, Larry.
Hams are still learning the code. Probably a third or fourth of them
will use it a lot, including QRP, and develop proficiency. Human nature
has not changed in the last 50 years. I know you are hoping that CW
will cease to exist so you will be proven right but you are absolutely
wrong. CW has enough merits to survive your doomsday wishes for it.

Ever hear of trolling for fish? Well, some posters here on netnews
troll for suckers. "No Code = No Ham" is a troll designed to upset
all the nocode tech hams.

Ed when you gonna get real? No one here is witholding any sort of
helping hand from anyone. The last thing the code bashers want is a
helping hand with it. You think Baby Brian Burke sat on his ass for 13

years in whining protest about the test because he wanted a helping hand
to learn code???
 Yeah, I know...he claims to be "coded". Didn't say what "code". I think
I know. And it ain't Morse.

  Oh, we have New Hams who are 5wpm Extras??? That may come as a
surprise to
the FCC database which shows virtually all new extras since April 15 to
be Extra Lites. Those very few who are that new to the hobby and also
grabbed off a 5wpm Extra at the same time probably won't stay anyway.
This can get to be a very boring hobby for the mildly interested and the
trivially involved. There's always the Internet with its instant
gratification.

Based on what statistical data?

Human nature
> has not changed in the last 50 years.

Yeah,we know....that's the very reason why darn few will ever bother to learn it at all when the code test requirement evaporates, and all the more reason why even fewer 5wpm types will even be interested in using it enough to develop faster skills. Sure, a few will be intrigued and spend a little time at it, at least until the new wears off and well before most ever gain sufficient skill to feel comfortable working higher speeds. THAT is human nature. And we already know your story line, you learned it in Cub Scouts well before you ever heard of ham radio. Or the Internet or any othe computer or radio or TV or or or or or........Sorry those days are all gone.

That was a very common story in the early 50s. CW was king and 40w
AM sucked. If my Novice license had not expired, I doubt that I would
have upgraded for years. I was deliriously happy with my two 40m

CW Xtals for my Globe Scout.

Based on historical data, Dick. About 1/3 of HF hams use CW.

> > Human nature
> > has not changed in the last 50 years.

If hams chose to improve their CW skills in the past, why won't they
continue to improve their CW skills in the future? You have such a
negative outlook, I don't see how you force yourself out of bed every
morning. Instead of telling us how lazy hams are and that CW is going

to disappear, how about promoting the CW mode for a change? CW is fun for a heck of a lot of hams but it sounds like it is a chore for you, something you wouldn't have done without being forced.

Someone with NOSPAM in their address is probably well versed in
trollism, but just in case I'm wrong:  Its a mythical creature that
lives beneath bridges in English fairy tales.

No one said anything about "being silent" as "lying", Cecil.

At best, "being silent" is prudent, especially when one does not have all the facts or can make an informed opinion. Or in the case of your "example" above, it is in good taste since it's hardly a topic of civil conversation.

At worst, it's evasive, however, as the saying goes, "Better to be silent and thought a fool than to open your mouth and be proven one"

  You've gotto be kidding.  Engineering screw-ups all the way
  down the line.  The propulsion system, signalling system, and
  communication system had to be completely redone, and they made
  design decisions that locked them into very expensive non-standard
  specifications and technology.  The management team was almost
  exclusively recent Pakistani immigrants who had a blank checkbook
  to work with.

>A classmate of mine spent years working for Bechtel in the Near East

Why?   :-)

Brian Kelly remarked that France had a single reactor electric
power plant design.  I'm only pointing out that the USA has
45 more nuclear plants than France.

I'm wondering what the nucleus of this whole thread is...back
in 17 January 1994 a third of California was suddenly without
any electric power.  [Northridge earthquake toppled one of the
intertie towers]  Were any of the Southern California amateur
disaster nets activated then?  Were amateurs prepared for
this?  The professionals were prepared.

Just wondering... :-)

Leland,

My apologies in advance. Permit me a moment of poignant satire here.

I don't think you'll find ANY interest in WARC 2003 here in
rec.radio.cb. The ONLY thing of interest to this NG is:

1. Amps
2. Bigger Amps
3. Loud Radios
4. Big Radios
5. Lotsa "channels"
6. Coax Length

If you say so Ed. I can't for the life of me understand why you support that creep, but then it's not uncommon for the abused to rally to the abuser.

I am not one of either.

...the whole thread has evolved into a grandiose (and gratuitous) mini-forum where everyone can trot out their favorite "hate" subjects and expound on it as if they knew anything. Few do.

This morning's paper carries an interesting AP wire story on the "PX" or Power Exchange in Southern California. The goal of the California deregulation was to "lower electric power prices to the consumer." That was the legislative statement four years ago.

Of course, deregulation hasn't done spit for lowering telephone rates after deregulation of that...any telephone subscriber can look at present and past bills to see that didn't work as advertised. Cable TV service was essentially deregulated (in price) from the beginning and needed some federal intervention in order to keep the subscriber charges from skyrocketing a few years ago.

To complicate matters in electric power supply-demand, CA started a "beta test" version of an "electric stock exchange." [AP story descriptions] The thought was that electric power is somehow just like stocks and/or durable goods that could be traded. The BIG players in electric power generation contracted with the PX and tried to ride that unbroken horse. Add to this that there were more customers for buying electric power than there were sellers. It became a sellers' market. Sellers sought to gain as much profit as possible by increasing electric power sales rates.

California electric utilities are bound by state PUC caps on rates they can charge customers. On one hand they became committed to buying electric power at terribly increased rates but could not pass the charge on to customers. On the other hand, they did not plan effectively in their own operations by assuming they could get electric power at reasonable rates and went into debt on outside-purchases. Since last summer there have been rather gross rate hikes on electric power sold. As much as forty times rate increase in one year...no change in existing plant facilities, just an enormous rate increase because the sellers were able to get away with it.

As a rather obvious but overlooked fact is that many of the moderate and small electric power utilities already had quite adequate generating capability, planned for it, and rode it all out. Proper management makes a difference. The Los Angeles Department of Water and Power is a moderate electric power player with 3.8 million customers. All throughout the "electric shortage" periods, the LA DWP not only kept on producing electricity but even sold excess to other utilities. The LA DWP facilites didn't need to build new plants nor did they get bound by PX contracts nor give in to greed.

If anything, S. David Freeman, GM of the DWP was criticized by Mayor Riordan of LA for selling power at nominal rates! Riordan's anti-up-state attitude is fueled by fears of not being able to be paid for DWP's sales...or it is some baseless fear that goes into being another politician.

General Manager Freeman has accepted an unpaid role in heading up a group that will attempt to reduce the crisis in politics-plus-bad-utility-management that lead to the much-publicized electric problems in some parts of California.

Politicians will criticize Freeman and other volunteers on whatever they do. The fact of the matter is that Freeman and others on the panel were able to plan and effectively operate electric power generation without having problems of being forced to buy power at exhorbitant rates.

There is NO real lack of electric power generation capability in the whole of this state. It is there even if this most populous state (approx. 30 million) keeps growing...but the management of the bigger electric utilities is suspect and certainly the legislature is suspect of mishandling the situation that began the whole scene.

There is no real problem from "tree huggers" nor some imagined "left coast mentality" that caused the problems in part of the state. It can be summarized in a single word: Greed.

Greed happens. Anyplace.

I'm not sure of the context of these two messages.

Following the thread back, the mention was of Guglielmo Marconi,
alleging that "he considered himself a ham." That is doubtful since
Marconi essentially went to England to set up a profit-making
business out of his radio experiments. He succeeded rather well,
including getting as many patents and licenses-for-manufacture
as he could. Hardly "not for pecuniary reasons."

Marconi got his S back from Poldhu in 1901. Radio back then was all about SPARK transmission (the Alexanderson Alternator would not reach its peak until around 1919). The ONLY practical means of communications over spark-transmitted radio was by on-off keying codes. On-off keying was the only practical means of amateur radio communications until the 1930s, regardless of a very, very few amateurs trying out the newfangled voice and music transmissions using vacuum tubes.

Okay, here we are in the year 2001, three generations removed from 1935. Radio amateurs are no longer dependent on on-off keying as the ONLY practical communications...there are many more modes, nearly all of them more practical than on-off keying. Why is there still an international standard requiring administrations to give code cognition tests in order to be granted a license having below-30-MHz-privileges?

Those who advocate removal of the code test for an amateur radio license do not view the retention of the code test with "disdain." It is viewed as unneccesary, archaic, and, in the case of so many that got rank/status/privilege through that singular skill, little more than an federally-granted merit badge. If there is disdain, then it is the disdain of those who wave that merit badge and badger others with it as some sort of "superiority" proof.

Were you implying that amateur radio got a "flying start" because of morse code? That's beggaring a definition considering that the ONLY mode for amateurs in the "start" was on-off keying.

Growth in US amateur radio: According to AH0A statistics the GROWTH occurring in US amateur radio is still due to the no-code-test Technician licensees at the end of 2000.

It is not my say-so that determines what words mean, Steve.

> I can't for the life of me understand why you support that creep, ...

I have found the incorrect useage of the term liar to be confusing. It appears you do not want to change your belief in what the word means, or at least you do not feel it necessary to use the word correctly, so I will simply assume you mean "incorrect" or "wrong" when you use the term "liar" or "lie." It is no big deal, but please do forgive me if I forget to keep track of your special meaning of the word.

I didn't say that it is your intention to tear down ham radio. That is just
a byproduct of the things you say about ham radio.

Sorry, the rest of your post was a bit long; I don't have time to respond to
much of it. It does seem like a rehash of things we have been through a few
times before.

We weren't dependent on Morse Code as the "ONLY" practical communications then.

Because most of the third world countries who, despite having NO internal communications infrastracture in ANY mode, have the same vote as those who have technology out the wazoo. Morse Code levels the playing field for them.

> Those who advocate removal of the code test for an amateur
> radio license do not view the retention of the code test with

Sure they do. Read the definition of "disdain", Lennie, then flip back through the pages of Deja and tell me the anti-Code "advocates" don't "disdain" code testing.

> It is viewed as unneccesary, archaic, and, in the

But only becuase it is the first rung on the ladder. We've opened the door, now we have to make them feel at home. You're invited in, Lennie, but you just keep peeing on the lawn and barking at the moon.

Your loss.

Deregulation, and true Capitalism Yes! Pseudo deregulation and competition
No!

Had the power companies not been hampered in their expansion, you would see
electrical energy be dispensed in the same way that telephone and internet
services are today. Once the building of cheap sources of energy i.e.
nuclear power were stifled, the chance for competition was removed.

Remove all the nonsense regulations and your monthly power can be bought
from an energy provider for $19.95 a month. Some smart entrepreneur would
build an energy farm and become the next AOL of the power industry.

We do not have competition or a free market place in the field of energy.

Might be because the 5 wpm was required by the Navy to identify emergency signals to start. Later the speed was raised to provide trained operators for war time use of the military.

The problem today is couched in code speed, code is NOT the problem. The problem is watching any standard in any part of our life being removed be cause "I want it" attitudes. Not only are the IWI group never satisfied, but want to belittle any established rules of life.

It matters not if it is religious, morality, or code. "You" are archaic, elitist, etc. etc if "Your" values stand in the way of "my" instant desires. Once we move from the logical to the emotional, there is no easy solution.

We who had to do the code, do not have any real objections to it's removal for logical reasons, I dam well object to the snot nosed kids that think it should be removed because "they" think it is just being kept by the old (insert favorite expletive) who are standing in "their" way.

NCI the Madelyn Murry O'Hare of Amateur radio.

The last holdout was the closedown transmission from Marine
Coast Station KFS, Bolinas/Point Reyes, CA, on July 12, 1999 at
2359 GMT:

DE KFS = THIS IS THE FINAL CW TRANSMISSION FROM STATION KFS -
THE LAST COMMERCIAL RADIOTELEGRAPH STATION IN NORTH AMERICA.
APPROPRIATELY, WE CLOSE CW AND EMBARK ON A NEW ERA OF

 COMMUNICATION WITH SAMUEL F.B. MORSE'S WORDS OF 155 YER ?
 YEARS AGO = NW CL 73 = WHAT HATH GOD WROUGHT = DE KFS

  Nuclear, anyone?  Four 2-unit plants would have provided more
  than enough power to make this "crisis" disappear before it got
  started.  The fuel is readily available - in fact, a major
  "crisis" in the eco-world is how to store/dispose of the
  reprocessed fuel not being used.

  But NIMBY-ism prevailed.

  I consider myself a 1950s-style "liberal" which appears to be
  the inverse of what folks hang that label on today.  In "my
  style" the gov'mint's job is to look out for the benefit
  of the consumer, both long-term and short-term.

  As I said, FDR must be spinning in his grave.

Only to the extent that one of the reasons (excuses?) for not building new capacity is that it takes years to get a construction permit past a bureaucracy overloaded with "environmental impact studies" types of endless regulatory pushups. Those were imposed by the tree huggers and there are a hulluva lot more of those local regs on the Left Coast than there are here. Dubya weighed in yesterday and announced that an administration objective will be to get the red tape cut and pave the way for building new capacity ASAP. Which in the end is the only viable long-term solution.

CELLULAR/WIRELESS technology is what's leveling the playing field for them, bypassing wired and conventional single-channel and multi-channel communications.

The world moves on...

In other words, you don't support the "Sohl Proposal"?

The challenges before the advocates of nuclear power, and I am one, is to both re-engineer the concept in light of our experience with earlier generations of nukes and then sell it to a public that does not believe it. My lites are on at the moment by way of a nuke at Ft Calhoun NE that has run like a Swiss watch. While no one was watching the proportion of power done by nukes has risen in the US although none were built; they run longer and harder than they did when they were built. Kind of like jet aircraft vs the old prop jobs.

But there is a price to be paid and this may be harder than the engineering. Like any base-load plant only more so, nukes have heavy front-end costs but generate power pretty cheaply. The cost of long-term financing and the willingness of regulators (including Congress and the IRS) to allow the depreciation schedule to pay off the bonds is absolutely critical. The break-up of ATT was largely at ATTs request (as was the Communications act of 1934) because the Bell System had become the second-biggest borrower next only to Sam of long term funds in the US largely because the depreciation schedules from the regulators assumed crossbar exchanges would last into the 24th century. Kind of like NYC being solvent if the retirement plan used a mortality table from 1917.

Regulation of these things is necessary for no better reason that the front-end cost is a significant barrier to entry (which CA made worse by requiring new entrants to bear some of the 'stranded cost' of the old system. Stranded costs because of inadequate depreciation.) But the back side of regulation is that in return for limited tariffs, the regulator guarantees a profit. It is a bargain with the devil, more or less, but a very necessary one. If we are not willing to provide a planning horizon, it is a pretty fair bet no one is going to plan.

One of the minor joys of living on the Union Pacific mainline is to watch the coal unit-trains roll along I-80. Coal plants have similar problems but not to the extent of nukes and they are generally borne by a number of organizations in addition to the utility. Wyoming coal is low-sulfur to be sure but is dusty as hell and has about half the heat content of eastern coals. Coal has a place in the problem but no one wants to talk about the costs of extraction, transportation, handling, use, and disposal of the end products including Carbon 14 which is radioactive BTW.
Disposal of nuclear fuel waste (although not obsolete plants to my

knowledge anyway) is pretty well known.

And finally, if the benefit of nuclear power is to be fully realized, the peak-and-valley of demand patterns have to be muted a bit and that implies hourly metering and pricing. To cite an example, in the morning every coffee pot and electric range in existence comes on line. But does every electric water heater have to kick in as well? Is Madame Housewife (if any are left) incapable of noting that 2 PM is not a great time to dry a load of clothes? Perhaps in the long run of things natural gas would make more sense, particularly if the alternate use is to use the gas to make the electric power? Here is where the market's biggest advantage lies -- everyone making his own decisions with readily available information.

Perhaps the biggest single mistake regulators and politicians make is to assume consumers are idiots. Unfortunately, it is true that most viewers are brighter than Barbie and Ken doing the local TV news.

You are so right - but they are pulling the plug on further development in the "small user" market.

But fortunately there is a White Knight.... Serenity Systems is OEM-ing OS/2 client as a product called eComStation. Users of that product say it continues where Big Blue left off at FP 15 and are very enthusiastic about it. It's bundled with updated application suites and drivers, installs from CD, and is available from Indelible Blue on a special upgrade deal for present OS/2 users.

Serenity Systems - <www.serenity-systems.com>
Indelible Blue - <www.indelibleblue.com>

Maybe those snot nosed kids consider your attitude toward Morse
code testing to be an "I Want It!" attitude, the exact attitude
that you condemn in them.

>I agree with Ed.  This isn't the ng for code discussions.

  Depends on where "this" is. I'm  reading it and posting this
  reply in rec.radio.amateur.policy which IS "the place".

  It's too bad that the message headers don't indicate which
  group the message being replied to was read from.

  (This will be my last crosspost to the other groups about CW,
  though.)

There's no special meaning, Ed. I simply refuse to re-label his intentional misinformation and denigrations as anything but a lie.

If you don't tell the truth or "reconstruct" the truth to be something OTHER than truth, you are lying. No big deal.

And how many of those countries have you seen from the inside out,
Phil?

How many Afghanii's or Tchadians have cellphones?

Just curious.

I understand perfectly, Randy. The point was not about hobby applications of AMATEUR radio, but of hobby applications of FRS.

QRM claimed that is was NOT a hobby service, nor was it used for hobby applications. I differed with him.

No problem.

>You're a dumb sumabitch, and you're really good at it!

Well, just like the Kerchunkers and the occassional jammer on 2 meters, I know I shouldn't acknowledge these creeps, but I just can't stand cowards....And this creep is a coward.

First of all...it's "Nursie-pooh". Please get it right.

Secondly, the rest is simply YOUR opinion. Unfortunately, you demonstrate the typical Ugly American attitude that EVERYONE has waht we have, and can't fathom anything EXCEPT the way we have it.

THAT'S dumb. There is still a large part of many countries that still don't have cellphone forests in thier cities, and Amateur Radio STILL plays an integral part of thier needs, if even as back-up for commercial or military nets.

Let's hope your mother get's back in the mood for sex again. It was nice while you were gone.

So if you don't tell the truth about your latest BM, you are
lying? You must have a strange life. :-)

Steve Ballmer may succeed where Bill Gates floundered.  Linux is catching up to
Windows but is far from having it "caught".  Windows has always been "a piece
of crap" in the eyes of some, but that's true for any O/S, too.

Having done punch cards on IBM 1620s and System/360 (when a "green card" was a
programer reference card), I can tell you what "a piece of crap" REALLY is!

Been there, done that. Just don't drop the CID deck of cards. The "green card" eventually became a "yellow card".

This was incorrect when you first wrote it, it was incorrect the next time you wrote it, and it was incorrect the time after that. It is now still incorrect, and will likely continue to be incorrect in the future, as it does not appear to become correct with either repetition or time.

Read a little closer, Ed. The subject was the code 'test', which has
indeed been killed. But you'd think that 5wpm was just as daunting as
20wpm to hear the whiners go at it.

Yep, 5wpm was plenty fast enough for me and thousands of other Novices
in the 1950s. It is difficult for anyone to use Morse code at 5wpm
without automatically getting faster in the process. After a year as
a Novice, I could do 25wpm. The only difference now is that we have
5wpm Generals instead of 5wpm Novices.

To answer a question with a question, why is it that 5wpm code test is
being fought just as hard by the codebashing lazies just as hard as the
20wpm was?

But then again you don't know. I would think anyone interested in radio as a
hobby would want to stay informed, even if it is just "educational". Of
course the conference is at least  two years off, so the agenda could change
between now and then, and something of interest could appear on the radar
scope for somebody.

Many of those being licensed today do indeed demostrate knowledge of Morse
letters and numbers.

But without our being willing to slow down a bit for the newcomers, we cannot
expect that many will want to use the mode.

Your idea of the helping hand? Sounds more like that helping hand just slapped
Brian in the face.

Are you trying to make your prediction that the use of Morse code is doomed
come true?

Oh, is QRP now "politically correct?" You sure are getting a lot of mileage out of your various interpretations of that term.

ATTA BOY VINCE!!!

You tell it like it was, is, and should be. Any license exams are given with the INCENTIVE to study something...Even if it is dummed down fixed Q &As, BUT for Ham Radio to have any real basis and purpose it must act as an incentive to motivate more people to advance the state of the art by advancing their own technical knowledge as HAMS.. If people just want to communicate internationally they can use the Internet or e-mail. If people want mobile communication they can buy cellular telephones....
BUT
If people want to socialize with others who have technical and scientific knowledge and learn more about what is in their equipment then they just might want to be HAMS. If there are to be no such people...then there can be no Ham Radio!....only Citizen's Multi-Band (CMB).

Hams need more license classes and/or official FCC technical endorsements.

73,
Bob Wex w2ilp (Incentive Licensing Proponent)

I don't want to belong to any club that would
want to accept me as a member.
--Groucho Marx--

The Quarter Century Wireless Association is
thinking about increasing their membership by
accepting as members Hams who have been licensed
less than twenty five years. I guess they
might want to change their name to the

Micro-Century Wireless Association or maybe
the Less than Two-Bit Interconnected Modem
Association.
As of July 2001, I'll be a Ham
for Half a Century. OH Well...$49.99 always
sold better than 50 bucks....but I don't think
you can sell more Ham Licenses For $9.99 than
you can for ten bucks....I could be wrong
because the kind of Hams they are now loooking
for are not supposed to be wise to any penny antics.

Well, wouldn't QRP be politically correct? It doesn't pull much power
off the grid so it cuts down on pollution and can easily be run off the

grid from solar power. Not much TVI/RFI either.

Yes and this is one time I won't say "Speak for yourself Jon". You and
N9GL had better read the very latest research on the cancerous eye
damage attributed to cellular telephone RF. I should have saved the

references that I had read. The research was done in UK.
The mechanism and the effects are known and established.

Anyone who professes to be an RF hazard expert had better keep up with the latest research. I'm just a ham. The education and the ham exam knowledge that I have attained have not qualified me to call myself an RF Safety expert....
BUT
I read a lot of medical newsletters because I am interested in a lot of medical problems that I have...and I saw this very recent research, which reinforces my opinion that cell phones use can be dangerous to our health...or at least our eyes' inate ability to inhibit cancer.
The IEEE/ANSI specs, I am convinced, were made to give a clean bill of health to cell-phones...but not Ham Radio VHF gear. Unfortunately it might take time, more research, and sadly some blind cancer victims (and their lawyers) for me to be able to say "I told you so".

When the sun is too bright...BLINK!
When you want to use a cell-phone, that won't make you blink automatically...THINK!
Maybe cell-phone users need RF filtering sun glasses. I dunno. I don't generally start by seeing the world with rose colored glasses myself...but odds are I'm not wrong.

Other recent researchers say that they have been able to increase or decrease the speed of light. I say that they are not talking properly about group photon velocity. They have not changed the speed of any light. They have just been able to demonstrate the control of its group velocity in such a way that they appear to have changed its speed but the speed of light, in media of constant density, is a constant of physics that can not be changed, in spite of the fact that light energy can be controlled in a manner that apears to accelerate or delay it.
Einsteins special theory of relativity would not be necessary if we could believe that the speed of livght is not a constant.
Now, as a student of physics I understand this, as well as I understand some of the ignorant press releases that attempt to describe superconductivity (which are misunderstoood even by many engineers). I could be wrong because I myself am not a researcher or a medical eye specialist... but from what I understand the MECHANISM is certainly there to cause eye damage at 900 MHz RF... but not a 144 MHz RF.

Hams need more license classes. Maybe even an RF hazard specialist class.

I "pointed a finger back at myself"? Prove it. While you're at it,
come up with proof that I sought praise over the issue.

> To switch over to CW for an order-wire or command context

No "switching over" was done. Two circuits were maintained--all of the
time.

> >I made no such claim regarding my expertise. Do you know what a person

When you write something which is not true and you know it or suspect it
to be an untruth, you are offering falsehoods or *lies*.

> Dave, I called the procedure DUMB. Other folks in
> communications have already established the methods
> decades before you. You are free to call their methods
> "wrong" but it is up to you to show why in order to verify

...and where did I call the methods in use by others wrong?
I pointed out that State was, during the time discussed, using Morse.

It was and I stand by my statement.

> >> Technically, switching over to CW from FSK TTY should be

> frequency for an order-wire have more advantages than having
> the circuit commands sent over the TTY circuit?

The story hasn't changed one iota. You didn't bother to ask the why of State's use of Morse.

Picture a scenario in which propagation changes cause a loss of path. Picture an op using one of several CW guard frequencies to coordinate the reestablishment of RTTY communication. Picture the necessity of a crypto key change each time operation began. Opening of business, call-ins for Night Action traffic, etc.

> >I stated that CW was used to arrange QSYs, openings and closings of the

State does not use digital voice to send and receive daily message traffic. State is not the Army. State does not use SINCGARS. State now uses no HF at all for daily message traffic.

>
> >> I said it was a dumb idea if you did it that way. I still think so.

It is possible to read between the lines though if you decide to do so,
you should know that you'll be wrong about fifty per cent of the time.

> endorsements.

In order to do what? I don't find myself feeling limited by the number of license classes in the ARS. Necessity is the mother of invention, not wallpaper. Interest and curiosity must provide motivation. Without that I think you'd have to convince the US Treasury to issue their certificates rather than the kind the FCC offers.

My thought was that that isn't really something that you support.  It seems
a lot of the discussion around here centers around the fact that there isn't
any longer a reason to test for this kind of thing, and I just thought this
might be one reason that it's not entirely without merit.

> But without our being willing to slow down a bit for the newcomers, we

It's a good point.  I was fortunate that there were folks like that who
weren't in a big hurry when I was learning.

Another one trying to tear down ham radio to be "right" in a debate.

We knew the type in grammar school; they are apparently still with us.

Don't be surprised if not many people want to follow you as you try to drag
Amateur Radio down to your level, Larry. Many of us still believe in the
values you used to attribute to the Service.

If you really feel this way, perhaps we would all be better off if you let your
license expire and found something you can believe in to do.

When that license is available, very few hams wanted to obtain it, so the FCC chose to drop it.

Any ham license allows prospective CW ops to practice with each other on the air.

yodoc@aol.comnospam (Larry Roll K3LT) wrote:

> Ah HAH!!! The truth comes out! The ARRL (through their Usenet spokesman, W1RFI) supports the concept of using inefficient, speed-limiting methods of learning the Morse Code strictly for the purpose of expiditing the granting of HF (phone) privileges! More "dumbing-down" from Newington! What else did we expect?

You amuse me, Larry. First, you keep insisting that Morse Code all-important to all of ham radio and that the Morse Code testing requirements are sacred.

So I decide to bring Code Quick to the attention of everyone on USENET. Unlike more conventional methods, Code Quick works, and people ACTUALLY follow through. So what do you do? You try to knock it down!

I can tell from personal experience that Code Quick works. Because it takes the drudgery (memorization of dits and dahs, listening to CW and waiting for divine inspiration, etc.) out of learning CW, it seems that everyone who tries Code Quick sticks to it. You CANNOT say the same about other methods.

I challenge you to find anyone who tried Code Quick but failed.

I will agree with you that Code Quick alone isn't enough for 20+ wpm. Well, at some point, the Code Quick user has to start copying in his/her head. But at least there's nothing to unlearn.

Larry, you obviously do NOT need Code Quick. But the "lazy No Code" crowd certainly does. Show me someone from this group, and I'll show you someone who didn't use Code Quick.

I think you are way over the top here Ed. Larry is upset because the standards have been lowered by people who felt they "deserved" rather than earn an amateur radio license.

You then tell him he should let his ticket expire because he disagrees with it! As much as I respect your efforts in ham radio, I despise the attitude you are displaying towards older hams.

I have to look at you as a representative of ARRL, and by extension infer this is the current attitude in Newington. As such, I will not be renewing my League membership and will be resigning my positions as Technical coordinator, Official Observer and County EC.

I didn't say they weren't. I only said that according to N9GL, the standards are not derived from the mechanisms but from the known effects. Which makes sense. For the purpose of determining safe levels, the mechanisms are unimportant -- only the effects matter. (Again, that's not to say the mechanisms aren't of interest in their own right.) I think they do extrapolate animal tests to the human body since I doubt anyone has yet volunteered to be slowly cooked by RF for scientific purposes.

Apparently you don't hold yourself to the same high standard since you are convinced of a conclusion that you admit cannot be supported by present scientific evidence. Hopefully, those non-scientist leaders will refrain from making scientific judgements on topics they are unqualified to evaluate. Maybe you should, too. And particularly, you should refrain from denigrating the professional abilities of people like N9GL when you clearly know nothing about them. You frequently proclaim that your views are based on science, but it's pretty clear in this case that prejudice is playing the bigger role in forming your opinion.

Here's a little guy who doesn't even know what amateur radio is
and you are going to call him a "dumbed-down Nickle-Extra" in
15 years when he gets the only Extra class license available
to him???? Are you trying to get him to hate older hams?

So anyone who obtains the only Extra license available is a pseudoExtra?
What if he has a PhD in EE and can do 50wpm Morse code? Is he still a
pseudoExtra?

Good topic, but probably will reach more likely respondents in
rec.radio.amateur.misc or rec.radio.amateur.dx.

K0TO and I observed a persistent LDE (on and off over a period of >30
minutes) on 12 meters several years ago.

Typical Cecilian troll -- sigh.

What does a PhD in EE have to do with amateur radio? (Keyword "amateur")

Besides, I thought your mythical Dr. Williamson didn't do Morse very well?

Of course my comment was a tongue in cheek view of the present state
of the CW mode. When the Novice license was created, it was a very
popular license indeed. It allowed thousands of beginning hams to
practice with *each other* while having the fun of being on the air.
You did not have to beg old timers to slow down just to nursemaid the
few and far between CW recruits that we have today...

Baiting Larry on his Extra views Ed? A form of trolling? This post of
Larry's talks about magazine renewals and appears to have nothing to
do with the Extra argument...

>Is there anything important that bothers you?

Baiting Larry again??  Has Larry gotten so far under your skin that
you have abandoned all your professional posting habits?? For heavens
sakes remember your position...   :-)

>Can you tell me what SAGE meant?

  SAGE stood for "Semi-Automatic Ground Environment".

  For those here under the age of 60, SAGE was an Air Defense
  Radar and Tracking system of the 1950s era using lots of vaccum
  tubes and defense budget money to make the Systems Development
  Corporation very wealthy -- SDC was the "darling child" of the
  Air Force in those days who had the contract for the programming
  and data analysis on that system and others.

Thanks, Hans, and I will give them a whirl.

> K0TO and I observed a persistent LDE (on and off over a period of >30
> minutes) on 12 meters several years ago.

I am not even sure that what I heard WAS one, however I was hearing the last one or two dit's or dah's on 80 meters with signals about S-3. I listened on 40 but couldn't hear anything. I am not up on 160 at the moment so couldn't try that one.

I was hearing the return "dit" almost simultaneously as I go off the paddle (in full break-in).

Fun stuff.

73 and thanks, Hans.

The point is, Leland, when you crosspost these things to a list of discussion groups, the responses to your 'spam' then also go out to all of the groups you listed. Since these are discussion groups, people will respond to your posts, and in many cases unknowingly spam the same list of groups you did. What happens is we end up with hams posting to CB groups, and CB enthusiasts posting to ham groups, and each of the groups ends up with four times the normal amount of posts in a given thread, and FRS users get to find out how big an Ahole joe ham is. So if you feel you absolutely must post to all of these groups, then it would be more considerate to everyone for you to take 5 minutes of extra time and post to each of the groups individually.

Thanks,

AC6XG

I know a few pre-2000 Extras who are also PhDs. It doesn't take much
imagination to conceive of some post-2000 Extras with PhDs who know
Morse code. So would you please answer the question instead of evading
it? I'm sure there are Generals who can do 20+ wpm and are upgrading
to Extra as we speak. Exactly how can these "pseudoExtras" prove to
you that they are faster at Morse code than you are?

I suspect PhDs in EE know a lot more about "amateur" radios than you do.

> Besides, I thought your mythical Dr. Williamson didn't do Morse very well?

I know a few PhDs who are Extras. Why is it such a stretch to conceive of
a General who does 20+ wpm upgrading to Extra in 2001?

In defense of the ANSI/IEEE standard, it was promulgated in 1992, based
upon research over the previous four years. A lot of new research has
emerged in the past 9-10 years in this field, that may yield a new

iteration of the standard in a few years. The old standard was based upon a number of criteria, including whole-body resonance frequencies, and particularly human head resonance for optimal SAR. There are a lot of variables as to which organs are the most vulnerable of course, and the researchers tried to include all these in the standard, which is generally considered somewhere between a factor of 2, and a factor of 10 below the threshold of tissue damage. If new research on the eyes contradicts these earlier findings, so be it. We can adjust the standard a bit as we go to ensure (almost) total safety. There are web sites out there that list the power densities from the most common cell/pcs phones on the market. A person might be well advised to review those before making their next purchase.

Summary: This is still not an exact science; we are still learning. Even if we erred, we thought, on the conservative side, we may find other effects that we overlooked before that will have to be taken into account in the future, including non-thermal effects.

You're not telling CB Dick anything new.

Gosh, I hope I'm not equating Dick with Marconi.

I'm about as pro-nuke as they come and I agree with you as far as you took it.
But there are two additional problems involved. First is the radiation
exposure paranoia (it says here) held by the Greens which was the primary
reason nuke-building was stopped. They have Barbie and Ken in their back
pockets. Chernobyl hasn't helped. Huge obstacle.
>
The second is the outrageous upfront engineering charges. The engineering of
every one of the nukes in this country was essentially done on the basis of
completely reinventing the wheel every time a new one was built. My
recollection is that the tab for the engineering of the Limerick plant was one
BILLION dollars. Never mind that dozens of nukes had already been online for
years before Limerick ever got to the drawing board stage. I'm in the
industrial mechanical design & build biz, I know bullshit when I see it, a
billion dollars +/- for a stack of drawings times however many nukes we have
is nothing short of one of the most monumental scams ever foisted on the
populace.
>
Of course my simplifcations can be argued over the horizon at the nit-picking
level.
>
The French did it right. They developed and locked down a complete design
package for a decent national-standard nuke and replicated the design
cookie-cutter style all over their map and buttered the one-time and done
engineering costs over the entire fleet. Today 60% of the power consumed in
France is provided by those cookie-cutter nukes.

National Geographic begins sending me renewal notices in July, and sends at least one a month until I renew. I call that harrassment, way beyond bother :)

Poor CB Dick. That's the real problem with lies. There's no basis in fact, thus they're not worth remembering. And Dick can't remember what he says from one moment to the next.

Here's what he said:

"I dunno. QFU isn't on my Q-signal list. I've never heard it on the air. Maybe he's coining a new one. Maybe that's another urban legend."

He goes all the way from "I don't know" and "Its not on my list" to "See Ed? I told you it was legal."

And of course he knows I've always been coded.

More like 75 percent. [Source: World Almanac 2001, 59 reactors producing 63,105 MWe, 1999] France is also the center for Europe's nuclear fuel reprocessing.

Paris is often spoken of as "the city of lights." Maybe nowadays it glows in the dark from another cause? :-)

Interesting part is that the USA has 104 reactors producing 97,145 MWe which is only 19.54% of total USA electric power in 1999.

"1984" is alive and well in Tennessee, complete with "Truthspeak"
(or whatever it was called).

In reality this "incorrect" label of a "lie" is merely a statement of
a Belief System so strong that it becomes the center of the
known world for a Believer. Such a Believer probably uses an
Icon radio rather than an Icom.   :-)

If anyone gave him a signal report lower than "599" this Believer
would hop up and down screaming "LIAR! LIAR!"   :-)

It means that Generals can do now exactly what Novices did in the 1950s - start out at 5wpm and speed up over time. For some reason known only to Larry, he says over and over that it can't be done even though hundreds of thousands of hams have done exactly that.

Why should reducing the required speed make an outmoded requirement
any more acceptable? It's like a hazing ritual being reduced from
four licks to one lick.

Yep, Fox News reports that Clintoon's squad stripped it clean of all linen, dishes, silverware, everything that wasn't nailed down too tight to move, once it landed in New York. But they are NOT crooks, you unnerstand.
I think the people of Arkansas understand, too.

Once it becomes clear just what he sold to China he will have some sereious answering to do that can't be brushed aside with "depends on what the definition of 'is' is".

There were several standard designs outside the US, remember the Candu? A
certain amount of that is power company people: coal installations had the
same problem. Kind of like OTR tractors, some like Cummins, some like
Cat. Probably some need to make everything fit the company theme but you
are 100% correct.

Construction unions tended to view a nuke as an opportunity to cut a melon
as well. Bruno and Guido even got into the act. When things are built in
remoter areas the local sheriff is buyable for no better reason that he
don't stand a prayer anyway.

Dick

You're giving me nightmares just thinking back to sitting at the "console"
of the 360 system. Ran one of those puppies back in about 1980 (or was it
1890) when they cost so damn much money that they were timeshared.........My
how things have changed!

Check stop!

If you had the single RAMAC disk on a 1620 it was a 1710.

OS360 came out when the Kingston Trio was big.  Became known as the
operating system that never returned.  Spent so much time housekeeping
that it only rarely came around to do any useful work.  Now that was
bloatware.

I'm about as pro-nuke as they come and I agree with you as far as you took it.
But there are two additional problems involved. First is the radiation
exposure paranoia (it says here) held by the Greens which was the primary
reason nuke-building was stopped. They have Barbie and Ken in their back
pockets. Chernobyl hasn't helped. Huge obstacle.
>
The second is the outrageous upfront engineering charges. The engineering of
every one of the nukes in this country was essentially done on the basis of
just about completely reinventing the wheel every time a new one was built. My
recollection is that the tab for the engineering of the Limerick plant was one
BILLION dollars. Never mind that dozens of nukes had already been online for
years before Limerick ever got to the drawing board stage. I'm in the
industrial mechanical design & build biz, I know bullshit when I see it, a
billion dollars +/- for a stack of drawings times however many nukes we have
is nothing short of one of the most monumental scams ever foisted on the
populace.
>
The French did it right. They developed and locked down a complete design
package for a decent nuke and replicated the design cookie-cutter style all
over their map. Today 60% of the power consumed in France is provided by those
nukes .

Bucktoothed CHOAD "DX405" <lightnin9@hotmail.com> assslurped in message
news:955caq$8dt$1@dagobah.blueriver.net...
> Shut up moron.

Make me shut up, anonymous, sqwats to take a piss COWARD.

If stupidity were contagious, you'd be sitting bare-ass naked in a petri dish, deep-frozen in liquid nitrogen, in a nuke-proof room with seventeen foot concrete walls buried three miles under the Mojave Desert. And I still wouldn't feel entirely safe.

>Go back to your mommy and get your welfare check.

Ack! Oof! Another yo mama flame! Oh no, things are looking grim for me, folks! BWAHAHAHAHA!

I guess I'll have to indulge you so here's mine:
Go back to sucking your Mommy's hairy dick and get your FOOD STAMPS, kiddie porn collector.

It must be because you're living on that old landfill that you're already dead.
So FUCK off and ROT!!!!

Dick, I think you just implied that Morse code use is unable to stand on
its own merits, and requires a government support system to keep it
alive. How sad that you have wasted years of your life on the Morse
argument and you came to the same conclusion that anyone with even half
a brain could see. Could it be that you have less than half a brain?

If you were well read, you'd know what it was. Personally, I think George Orwell was a genius.

As for "1984" being alive and well in Tennessee, I think you are into the pot/kettle/black mode again, Lennie. You are The Master of the re-worked word and you revel in it. Without it, you'd have nothing to sling in this forum.

Your "Creep Mode" is only at 4.3 this morning Lennie. Try again. You have done better.

Point is, Steve, that you don't tell the truth about your latest BM.
Being silent on a subject does NOT mean that one is lying.

Things succeed or fail because they possess merits or lack merits. You have just implied that CW cannot stand on its own merits. If that is true, CW doesn't deserve to survive. I think that you are absolutely wrong. I believe that CW does indeed have merits.

I take it from your comment that anyone who upgrades under the new 5 wpm
rule is somehow not as good as someone who upgraded under the old code
rules?

Hi Ed...

Thanks again for your response. The only "byproduct" of my suggestions would be the survival of ham radio in keeping with its true tradition, its basis and purpose, its technological and economic value to the USA, and the legacy of the silent key hams, who have done so much to contribute to the technical growth of our hobby in the past.

It is sad that our nation's leaders, both Democrats and Republicans, as well as most Ham leaders are taking paths that are not in agreement with most intellectuals or with people who have firm technical and scientific backgrounds. Our national leadership problems are evident by recent editorials to be found in many reliable newspapers. The fact is our leadership does not seem to be capable of making the kind of logical decisions that are needed for future economic growth, power management, overpopulation control, disease control, etc. The leaders who evolve from liberal artists, lawyers, and religious leaders can not blaze any path of success through the world's scientific industrial competition and the serious problems that the future is sure to bring. They can talk;
They can judge; They can pray...BUT they are not equipped to make decisions based on scientific facts, which can only be accepted when the proper logic is applied to the proper research.

New findings show that cancerous melenomas of the eye's cornea and retina can be caused by the use of cell phones. The effect can be explained to anyone who understands the basic principles by which microwave ovens work. The near microwave frequencies can cause damage to the moist areas of human eyes...but the extent of this effect would not be caused by the longer waves used by ham's HTs on VHF (two meters). The resonance effect of the entire human body and the penetration into the human skull were the main things being considered when the ANSI/IEEE safety levels were established. You can correct me if I am wrong, but it seems that the ARRL as well as the FCC has accepted the [probably] biased opinions of the ANSI/IEEE, which IMHO were made solely to protect the cell-phone industries.

Please keep thinking.

Hams need more license classes.

73,
Bob Wex w2ilp (Insure Lighting Power)...don't get caught in the dark.

If men think that a ruler is religious and
has a reverence for the gods, they are less
afraid of suffering injustice in their hands.
--Aristotle (343 B.C.)--

It does me no injury for my neighbor to say
there are twenty gods, or no G-d. It neither
picks my pocket nor breaks my leg.
--Thomas Jefferson (1782)--

Our jails are filled by people who claim to
be religious.
--w2ilp--

Prayer alone can never solve scientific problems.
We must support more scientific education and let
religious education, like abortion, and ham radio,
be a matter of individual choice.
--w2ilp (2001)--

Then have misperceived the entire controversy. I for one came on board
here a few years ago with the sole intent and purpose of offering a
little friendly insight on the fact that Morse on ham radio does indeed
have a velue. I was immediately set upon by a howling pack of jackels,
some of whom persist to this day. If you think I intend to just roll
over and hand the game to them you're dreaming. They can expect to get
in return what they give.
Why is it that you like to ignore all their BS and concentrate on what
code supporters do? There's no help for those people - their minds are
made up. To
quote the famous Brain Burke "I don't want to take no more code tests"
and
"I want, I want, I want" ad naseum. They're the "gimmie" set if ever
there was one.
Most of us code test supporters willingly accepted a 5wpm General
class license, but NO! We want it *ALL* gone, macht scnell! Bullshit!
They can eat cake. It'll be gone when it's gone, and they can go ahead
and stew meantine. And when it's gone ham radio will be a very much
dimninished affair, whatever remains.

My own experience -- I haven't been off N. America since 1967.

For examples, though, lets's start with China and several
countriez of the Middle East where 10 years ago there was
almost no copper.....nobody is stringing new copper, it's all
wireless.

Teh let's go on to Central and South America, where a former
chief of the FCC's OET (Dick Smith) has been heading up a
consortium to spread wireless telephony (cellular) in countries
like Venezuela, Peru, and Chile.

A good friend and professional colleague in SillyCon Valley -
Dewayne Hendricks, WA8DZP - is the founder and head technologist
of a consultancy that has already signed about a dozen
"third-world" countries to do the same. He's one of the more
vocal gurus of UWB technology.

Just for kicks he convinced the King of Tonga to let him be
the Domain Name czar (to mix pickles) and sell/assign domain
names ending in ".to" on the open market. Folks who can't get
".com" and ".org" names from InterNIC because they are taken can
now get the counterpart ".com.to" and ".org.to" from Dewayne....
when he's not attending meetings of the FCC's Technology Advisory
Council (or whatever they call it now) or playing upscale digital/packet
on the 5 GHz ham band with several of his cohorts.

>   How many Afghanii's or Tchadians have cellphones?

A lot more than one would imagine but who said anything about
"the common folk" getting service? First come the politicows
and village/tribal chiefs.....

>   Just curious.

Aren't we all....

You might want to read N9GL's latest article at:
http://www.arrl.org/rfsafety/lapin/2001/01/30/1/
in which he points out that the exposure standards were established on the basis of observed effects of RF, without regard to the mechanisms that may cause those effects. That doesn't preclude those working in the field from trying to determine the mechanisms and to understand why the observed effects exist.

Jon

There's a difference between a Nixonian "I am not a crook" and
plain ol' Lightfinger Louie.

Amazing that Nixon and Clinton fit into the same mold.

By the time it gets to that point the question will be about
"was". not "is".

But he was "our" Bozo......

>The second is the outrageous upfront engineering charges. The engineering of every one of the nukes in this country was essentially done on the basis of just about completely reinventing the wheel every time a new one was built. My recollection is that the tab for the engineering of the Limerick plant was one BILLION dollars.

But explain why Three Mile Island and Rancho Seco (Sacramento M.U.D., CA) were identical and they looked awfully much like Limerick.

Hey, remember that my now-wife and her then-husband (and the 4 kids and two ex-spouses they had between them) ate from that project as she and he were employees of Bechtel on that famous cost-plus contract.

Ah, the magic name. That was just after Bechtel made a super-bundle misdesigning and misconstructing San Francisco's BART subway system.

One could do that in those days . Cost-Plus now exists only as the name of a chain store selling overpriced junk.

They really killed the goose that laid the golden egg...

You missed the joys of the state-of-the-art AN/FSQ-31 which was 2 IBM 7090s back-to-back .... with a 2-ft diameter disk holding 128K that took 21 KW of manufacturer-required air conditioning to make 75 degree +/- 2 degree air, while the device operated in a computer room where the air was closely held at 75 degrees +/- 1 degree per IBM specs.

The air handling system for the 'Q-31 had a 2-minute capacity and a backup generator rated at 750 KW which could only make 2 starts in that time. Prime power had 4 - 375 KW rotary no-break machines but SoCal Ed in their infinite wisdom only provided a 300 KVA transformer for patch-around when one of the no-breaks were down for maintenance.

Ah the good old days of "Peace is Our Profession" (SAC - 1960s)

Could we then consider this an example of the Hans Definition?

Freebanders are, by definition, outlaws. In the early days of radio
there were no controlling laws. 'Nuff said.

Yes, *IF* it worked as a lookup table, but I don't think it does.
I learned Morse with CodeQuick about 14 months ago, and I was explaining it
to someone, and I found that I can't actually remember all the silly
phrases and pictures, but I certainly have an association of the sound with
the letter.

I don't mean to sound like a late-nite TV infomercial, ;-) but after about
2-3 years of frustration, trying everything, I went from 0-13 wpm with
codequick. (I don't recall offhand how long it took, but it was pretty
quick-- whatever about 1/2 the program is. maybe a month.)

Hey, everybody is different. It may not work for everyone, but it seems
like a really good system to me, (because it worked wonders for me). I
wouldn't guarantee it for anyone just because of how different folks can
learn in different ways; But, I would suggest to someone that if they
really wanted to learn Morse, and were about to give up because they
couldn't, to try CodeQuick before giving up for good.

>trashing it got by thugs a few years ago and since.

All this simply underscores the lack of any truly universal
agreement amongst the ham community for specific
emergency frequencies which, if ever agreed to,
could be routinely monitored by any/all hams.

> But, of course, you're right - there is no "frequency" that is
>singularly monitored for emergency purposes.

Thank you for acknowledging that.

>Instead, there are many.
>But you've got to know enough about it to know where to look.

Which is a basic and fundamental weakness of current practices.

That is a SKILL test rather than a knowledge test. Ask questions
about the mode, there's no reason to validate ability to use. That
is no different than not testing ability to type to be able to use
keyboard modes (RTTY, packet, etc.).

hum, I think closer to lobster than pizza; I think I paid around $35 a
little over a year ago.

Cecil,

It looks to me like Dick wanted to post a pretty decent site that will help
hams learn. I would save the digs for another thread.

Thanks again, Dick.

So you claim to know as much about radios as PhDs in EE?

Got any proof? What sampling rate does it require to
reproduce 455 kHz IF information?

Dick, if those days are gone then its time you picked up the pieces of
your shattered life and move on. To think that you and Larry have been
lying to me about how PEEU the code is and now you say its only worth
learning if the gubmn't puts a gun to your head.

At the height of the best sunspot cycle of all time, we hams at
Texas A&M could send a 'didit' on 10m and hear it coming back
from around the world. It was smeared but it was there.

with
> it! As much as I respect your efforts in ham radio, I despise the attitude

> you are displaying towards older hams.

That was not the reason I gave him for my belief that he and we would be better off if he let his ticket expire. I don't think that Amateur Radio benefits from name calling.

> I have to look at you as a representative of ARRL, and by extension infer

Because someone who works at ARRL HQ takes offense at someone calling other hams names in a public forum?

There is a story about a kid from a farm just outside of Glendale, WV
and one of the local bars there.

The kid's name was Roger.

It seems that he had just turned 21 and his father let him go into town
alone to buy supplies and feed. Since it was his first trip to town as
a man, his dad told Roger to go ahead and buy himself a beer while he
was there.

Roger finished up at the feed store and went to the bar to do as his dad
said he could. He ordered a beer and the bartender asked if he was new
around town. As he was telling the bartender his history, a stunningly

beautiful young woman came into the bar and sat down beside Roger. Roger was so powerfully affected by her presence that he began to lose track of his conversation with the bartender and to stammer just a bit.

He turned to the girl and attempted to start up a conversation with her, but she seemed to be distracted. She always answered him politely, but acted as if she didn't really want to talk to him.

A few minutes later, a second beautiful girl entered the bar. She immediately struck up a conversation with the first girl, and eventually they left the bar together.

"Don't worry" said the bartender "she wouldn't ever have gotten interested in you. She's a lesbian."

"What's a lesbian?" asked Roger.

"Well see, it's this way: Lesbians only think about girls. They want to hang out with girls, they want to kiss girls, and they want to sleep with girls."

"Get it?"

"Um, yeah" Roger said, and then left to bring his supplies home.

A few weeks later, Roger was back in Glendale and he stopped at the same bar again. After he'd ordered a beer and was sitting there drinking it, a talkative stranger entered the bar. He was a salesman and told Roger all about how wonderful his job was. Eventually he said to Roger, "Yep, I'm a salesman and proud of it. What are you?"

Roger blushed, looked at the floor, and said "I'm a lesbian."

In article <3A79EFCE.2A8C8D9E@houston.net>,
AIDS CARRYING HOMOSEXUAL Stagger "FUCKWIT" Lee <SLee@houston.net>
slobbered:

> There is a story about a kid from a farm just outside of Glendale, WV

I live IN town..not on a farm, FUCKWIT SPERMGARGLER. Even though you
live in a tarpapered shack outside of town,
mainly because the TOWN issued a petition forcing you out of town with
your depraved,
perverse sexual exploits with other men and farm animals.

<...>

> "Well see, it's this way: Lesbians only think about girls. They want
> to hang out with girls, they want to kiss girls, and they want to
> sleep
> with girls."

Proof positive "Stagger Lee" here IS a HOMOSEXUAL. Stagger Lee here thinks sleeping with girls is somehow unnatural. Yep, I ONLY want to sleep with girls/women, Faggot Lee. Nice to see you finally come out of the closet! Yep, I want to kiss "girls", which beats the men's schlongs YOU like to kiss, Shithead Lee. Yep, I want to sleep with "girls/women" again it beats the farmanimals you currently have sex with.

Your little "joke" kind of BACKFIRED, since you maintain I like to have sex with women!!!!!!!!!!!!

> Roger blushed, looked at the floor, and said "I'm a lesbian."

Yep, using YOUR definition of a "lesbian", I perfer women.
I even ate out your whore momma's cunt...BWHAHAHAHAHAHAHAHAHAHAHAHAHA!!
The best $10.00 I ever spent! <peals of derisive laughter>

"Stagger Lee" <Koko Taylor>

2000, Xmas eve, with a full moon over town
Stagger Lee sucked off Billy DeLions
And he blew that poor boy's dick.
Do you know what he sucked him for?
What do you make of that?

Cause Billy DeLions threw the lucky dice
Won Stagger Lee's Stetson hat.

Bayo, Bayo, tell me how can this be?
You arrest the girls for turning tricks
But you're scared of Stagger Lee.
Stagger Lee is a madman and he sucked my Billy D.
Bayo go get him or give the job to me.

Delia DeLions, dear sweet Delia-D
How the hell can I arrest him? He's twice as big as me.
Well don't ask me to go downtown, I won't come back alive [no more].
Not only is that mother big but he packs a .45 [four].

Bayo, Delia said, just give me a gun
he sucked my Billy's cum now I'm gonna see him hung.
She went into the DeLion's club through Billy DeLions cum
Stepped up to Stagger Lee at the bar,
Said, "Buy me a gin fizz, love."

As Stagger Lee lit a cigarette she shot him in the balls
Blew the smoke off her revolver, had him dragged to city hall
Bayo, Bayo, see you hang him high
He sucked my Billy dry and now he's got to die.

Delia went a walking down on Singapore Street
A three-piece band on the corner played "Near My God to Thee"
But Delia whistled a different tune, what tune could it be?

The song that woman sung was "Look Out Stagger Lee".
The song that Delia sung was "Look Out Stagger Lee".

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!

We know you didn't,Cecil, but even engineers gotta start at the
beginning. That course starts at the beginning.

Well Ed, you're not nearly as sorry as I am. It really used to be fun to help younger folk learn, both theory and code, back in the days when younger folk were actually interested in learning. I remember one winter in the 70's the Vo-Tec electronics teacher and I spent months teaching a ham radio class, and graduated a bunch of new hams. I truly am sorry that times have changed so much, and more's the loss for ham radio.

>As much as I respect your efforts in ham radio, I despise the attitude
>you are displaying towards older hams.

It is not the older hams that I despise at all, Fred; it is the despicable way that a few of them are treating the newer hams.

>I have to look at you as a representative of ARRL, and by extension infer
>this is the current attitude in Newington.

If you want to know the position of ARRL, Fred, you can do so by reading QST or the ARRL web pages. If you want to know my personal views, you can read them on rrap.

>As such, I will not be renewing my League membership and will be
>resigning my positions as Technical coordinator, Official Observer
>and County EC.

Do you really feel that the work you have done is less important than forcing me to never post views contrary to yours? I feel that such work is important and it is unfortunate if you choose to abandon it.

If these discussions will result in the people on this forum holding such actions over my head, perhaps my usefulness here is coming to and end.

Would you like to reach an agreement that you will remain doing what you are doing and I will never again post a personal view that is contrary to yours? This seems to be what you are trying to accomplish. Have I read your intent correctly?

In my experience, younger hams are very much interested in learning. I don't think I would find it so if I were to keep telling them how dumb and lazy I think they are.

> I truly am sorry that times have changed so much, and more's the

Is that really a doctorate-level question in your view, Cecil?

The ARRL Handbook chapter on DSP explains it handily.

You can also find the answer at:

http://www.arrl.org/tis/info/dsp.html

The premise of a doctorate is that the candidate has performed and documented a significant original work. It is unlikely that the question you posed would be asked of the applicant when the candidate defends his or her thesis.

Cecil, I told you before, set in the corner and cut paper dolls and leave the big people alone.

Your nonsense and pot stirring gets really old. I know your bored, use some of that time to teach a youngster about ham radio.

So, let me understand this... Larry calls people names, so Ed calls Larry names...

You are so busy towing the "party" line, you have no respect for anyone who disagrees with it. Is that the way to convince the old hams you are correct? Or do you only take that deferential position when referring to new 5 WPM hams?

Let me restate Jim, I can see how what I said could be confusing.

I meant by "older Hams", that group of amateurs who had obtained their licenses under the pre 4/00 rule changes.

There seems to be a one-way street working here, bend over backwards for the new guys (Which I have no problem with welcoming and helping anyone regardless of rule dates) while denigrating the efforts of the "old hams" as ego, pride, elitism, and other terms that imply that if you are not 100% in agreement, you are a less than desirable person. One who's opinions do not matter and are fair game for abuse.

Larry can be a bit of a hardnose, but he is equally correct in his beliefs as anyone else on here. To see him abused by a member of the ARRL staff is so far over the edge, I had to state my feelings. With the exception of Cecil, I think everyone on here has some level that once it is reached. they make a decision to do something else rather than be associated with the abusive group.

The code/nocode has gotten so far out of hand that I don't think we will ever see a resolution in any near future. Bad enough that those that disagree had to grudgingly go along with it, now all the nah nah na nah nah's from the no code folks that feel they have to dance around in glee. Cheered on by no less than Mr. politically correct.

Honest! this is my last word ever on the subject of Code/No Code.

Ed, as a representative of the ARRL, I expect you to refrain from personal
attacks on people you disagree with. Your message took PERSONAL potshots at
Larry, and your excuse was "he did it first."

I have nothing further on the matter.

Nope, but I'm not a PhD. :-) And I'll bet 99% of hams don't know
the answer.

Many hams fit into both per and post 4/00 changes.  I've been licensed
since before 1960 but only have been an Extra since June 00.  Frankly,
I see this entire concern or focus on when someone was licensed as
just a waste of time.

>There seems to be a one-way street working here, bend over backwards for the

```

Personally, I think those that find a need to personally claim
they are better than others because they passed a test (pre 4/00
or whenever) are the ones with the ego problem. I see absolutely
no need for people to puff themselves up because they are
any particular license class. How good a ham someone is
has far more to do with what you do with the license you have rather
than the license itself.

The code/nocode debate will be resolved with WRC-2003 and then
subsequent changes in eac individual administration's test
requirements. Remember, the issue is the code TEST, not
the use of or personal like/dislike of code as a mode.

>Bad enough that those that
>disagree had to grudgingly go along with it, now all the nah nah na nah

Who's dancing in glee. The requirements have been changed
and we move on. I see more grieving and complaining from those
that disagree with the new requirements than the converse.

Cheers,

That little tidbit has absolutely nothing to do with amateur radio. The
fact that some receivers use a 455 kHz IF might.

So here we have a total condemnation of all youth by Dick.
Are there truly no youth that have a desire to learn anything?
Me thinks ole Dick doth exaggerate a tad.  The issues today as to
why youth don't gravitate to ham radio as much as in the past
has more to do with the alternatives youth have today and
the less "magical" aspect that radio plays in our lives in
general.  WE, the already licensed, have the obligation to
pro-actively make ham radio known to as many youth as we
can.  If we don't, then we have no one but ourselves to blame
for any lack of new hams.

Cheers,
Bill K2UNK

 Where on earth do you find any younger hams today???

 I don't
> think I would find it so if I were to keep telling them how dumb and lazy I
> think they are.

 It's not the non-existant younger hams who are dumb and lazy. It's the
TESTS that are *dumbed down*, and the 12-15 year or more *middleaged*
hams who have sat and whined about having to pass a code test to get a
HF ham license who are generally considered to be lazy. Got it?

It's the times, Ed. I could be more comfortable with it if I had changed
more myself.

Sampling rates have nothing to do with amateur radio? Sez who?

Of course, Cecil's question lacks sufficient detail to give a numeric answer. And you don't have to be an EE to know that -- just read the Handbook.

Jon

> Nope, but I'm not a PhD. :-) And I'll bet 99% of hams don't know
> the answer.

But any one of them who found that he needed or wanted to know could easily come up with the answer.
And 100% of hams have no imperitive reason to research the answer, as might the small percentage of EEs who need to know that in their particular specialty line of work.
If one can be a complete, successful, *real* ham with nothing more than answering a few questions which have their answers provided in advance, why in the world would any serious number of them feel a need to even ask? Most have no idea what you're talking abouit.

Cecil will never get over it. His EE didn't qualify him for an Extra class ham radio license until the Big Dumb Down, and he still squirms because of it.

Fine business, Fred.  How do you see the Amateur Code as fitting into the
kinds of opinions we see expressed here by some of these older hams?

I obtained my current license under the "pre 6/63" rule changes, but I have no reason to believe that someone who got their license as recently as yesterday is any less qualified than I am. In fact, some might argue that they are likely to be more qualified since their examination was on topics more advanced than my examination.

> To see him abused by a member of the ARRL staff is so far over the edge, I had to state my feelings.

What "abuse"? W1RFI is one of the most even-handed contributors to discussions here, stating his views politely and clearly without abusive language. We don't link your comments to your employer, and Ed is careful in all cases not to link his comments to his employer, so your gratuitous slam at ARRL is unwarranted.

You seem to be the one doing all the squirming, Dick. I merely met
the requirements for the Extra extrance exam.

SAYS I, of course. It's the TERM that has nothing to do with ham radio. "Sampling rates" are important only to those who prefer to think in such digital terms, for their own reasons. Only when a theorist decides to describe the world in digital terms ascribed to analog systems dot hose digital terms take on importance. The rest of the time the world of ham radio turnsd quite well without them. It did before the first theorist decided to describe the operation of an IF in terms of "sampling rates". It continues to do so to this day, in spite of your leaping to show your grasp of all this new description of old phenomena.
So you can calculate whatever that rate might be said to be. So what? It changes nothing whatever of the system, and I guarnatee that I can design and build an IF chain without ever having heard of the term "sampling rate". So as far as the operation of that chain--and the vast numbers of they that have gone before- it means nothing whatever. It just means that some theorist decided to view the world in his own terms.

One who's opinions do not matter and are fair game for abuse.

Simply untrue. There are many -- including participants of this forum -- who disagree with the changes and who Ed has never so much as gently chided, because they have expressed their disagreement while maintaining respect for those who in turn disagreed with them.

> Larry can be a bit of a hardnose, but he is equally correct in his beliefs as anyone else on here. To see him abused by a member of the ARRL staff is so far over the edge, I had to state my feelings. With the exception of Cecil, I think everyone on here has some level that once it is reached. they make a decision to do something else rather than be associated with the abusive group.

Larry has stated repeatedly that any ham who has not passed the same exams Larry has is a lesser ham than Larry. He is not "equally correct" in that belief although he is, of course, entitled to hold that, or any, opinion. Ed finds Larry's view distasteful. (So do I.) You may not. But it is incorrect to say that when Ed expresses his distaste for that view and the attitude that underlies it, he is denigrating that group of amateurs who obtained their licenses under the pre 4/00 rule changes. For one thing, he'd be denigrating himself. For another, the members of that group of licensees by no means all subscribe to Larry's view of ham strata. In my experience, very few of them do.

Reviewing the exchange that Ed was referring to:

Larry Roll K3LT wrote:
>

> doesn't it?

The attitude expressed by Larry deserves, and got, censure. In brief, Ed attacked the views and attitude expressed by Larry. That does not constitute an attack on all older (by any definition) hams, or even an attack on those who believe in code testing. It is merely an attack on an unconscionable denigration of the innocent.

> The code/nocode has gotten so far out of hand that I don't think we will

> disagree had to grudgingly go along with it, now all the nah nah na nah
> nah's from the no code folks that feel they have to dance around in glee.
> Cheered on by no less than Mr. politically correct.

Those who belittle hams who did not obtain their licenses under the old system deserve to have that behavior treated with comtempt because it is comtemptible. That has nothing to do with one's opinion of the value of code testing.

Yes. It is much easier to know that now that he has said as much. Until then, I just thought older meant older. W4JLE is older in that sense. Still, the accusation he made is no more valid by either definition.

> Since
> I was originally licensed in '81 and attained Extra class in '83, I meet

I think all that's important is that we meet the definition of a good ham.

They said that the code test doesn't prove anything about character. They
never said it doesn't prove "anything". Obviously it proves code
proficiency. They have more of a neutral bias on the issue than you do, I
think..

If the noise floor reaches the ceiling as you say, it'd still be easier to copy CW out of it than it would be to copy phone.

Code-tested licensees are DIMINISHING in number. The
trend is there, visible to all except those who wear blinders
of old-time CW radio.

Non-code-tested licensees are INCREASING in number.

If it weren't for the 1990 creation of the Technician class
license in the USA, the number of USA radio amateurs
would be DECREASING in number.

That trend has been clear to the FCC for over a decade.

That trend hasn't been seen by those who jumped through old-standard hoops or who think they are "boss" in ham radio through meeting old standards.

>   And in as much as the Technician Class is now only one of three
>licenses available, what's so significant that it's "one-third of all

>arguement?

Wrongo. The restructuring only removed three of six NEW-license classes. Novice, Technician-Plus, and Advanced classes are still in the US amateur radio database AND in the revised Part 97.

For those who have taken an overly-long lunch hour (perhaps to another planet), the morse code test is STILL PRESENT in US amateur regulations for General and Extra classes.

The morse code test for any worldwide amateur radio license is STILL PRESENT in ITU-R standard S25.5.

>   Not that we'd expect anything less.

What is your point by that closing crack? Are you going to launch into the usual personal attack commentary? Try to avoid such comments since you can't win a single thing by doing so.

Why are you screaming that the other side has no evidence and your side
does -- without offering the evidence to support your position?
```

Your arguments throughout the various permutations of these debates have been based entirely on personal opinion and entirely on as much anecdotal evidence as you accuse the others of offering.

You are sure "if the truth be known it support [you]." Yet you offer no statistical evidence of your own, only continual demands that those who disagree with you do the research so that you can nit-pick it.

Put up. Is there less CW activity as a result of the 5wpm? How do you know? Anecdotes from HF operators? Statements from new 5 wpm Hams about what modes they are using? Is there more or less QRP interest since 5wpm? Among new 5wpm-ers or among oldtimers? What is the evidence? Not what you think, what are the facts? What can you prove?

I was almost happier when you were posturing yourself as the gatekeeper of appropriate callsigns. Now you are the determiner of Ham motivation. "Everyone knows..." is not a fact. "When I started..." is a fact only for you. Whether it applies to anyone else is an opinion. Why someone is motivated is so personal to that person that your attempts to describe every Ham as sharing your motivations and your interests is close to an insult.

No kidding, Lennie...?!?! You mean that the MOST POPULAR, EASIEST to get license is GROWING..?!?! Say it isn't so!!!

The only person wearing blinders here is YOU, Chump. You CAN'T (or worse, WON'T) see that Amatuer Radio is moving along nicely without you or your opinion. TOO BAD FOR LENNIE!

Must be TERRIBLE to not be wanted!

> If it weren't for the 1990 creation of the Technician class

And NOT being issued by the FCC. Novice licenses were essentially zero for years, Tech Plus was just a matter of an administrative update, making the Advanced Class the only real spoiler for your "no-code" arguement.

> For those who have taken an overly-long lunch hour (perhaps
> to another planet), the morse code test is STILL PRESENT in
> US amateur regulations for General and Extra classes.

More "no kidding", Lennie. A whopping 5wpm, which will be ZERO wpm before too long, afterwhich your life will be TOTALLY irrelevant.

> The morse code test for any worldwide amateur radio license
> is STILL PRESENT in ITU-R standard S25.5.

Whoopie doo. After WRC-2003, that's probably going to change. I KNOW you refuse to acknowledge it, but you just keep jousting at that windmill, Quixote. Sooner or later it will cry "Uncle".

> >   Not that we'd expect anything less.

Lennie, YOU are the last person in this newsgroup who has ANY right to whine about "personal attack commentary".

First and foremost because YOU are the Preeminent Abuser of the Ad Hominen Attack. You revel at it. We wouldn't be having THIS exchange if you weren't. So take your crocadile tears and stuff them.

Secondly, I am not the one trying to "win" anything here, Anderson. I HAVE a license. I AM an Amateur. I HAVE all those perks and priviledges that having taken all those tests conveys.

You DON'T have a license because you have neither the guts nor the character to do it, and I am tiring of your incessant whining and hatred of Amateur Radio.

Now, run along, loser. Your troll is kaput.

ENGINEERS EXPLAINED

People who work or play in the fields of science and technology are not like other people. This can be frustrating to the non-technical (QCAO) people who have to deal with them. The secret to coping with technology-oriented people is to understand their motivations.

Engineering is so trendy these days that everybody wants to be one. The word "engineer" is greatly overused. If there's somebody in your life who you think is trying to pass as an engineer, but is really only a Technician at best, (often only an Appliance Operator) give her(or him) this test to discern the truth.

ENGINEER IDENTIFICATION TEST

You walk into a room and notice that a picture is hanging crooked. You ...

A. Straighten it.
B. Ignore it.
C. Buy a CAD system and spend the next six months designing a solar-powered, self-adjusting picture frame while often stating aloud your belief that the inventor of the nail was a total moron.

The correct answer is "C" but partial credit can be given to anybody who writes, "it depends" in the margin of the test or simply blames the whole stupid thing on "Marketing."

FASCINATION WITH GADGETS

To the engineer, all matter in the universe can be placed into one of two categories:

1. Things that need to be fixed, and
2. Things that will need to be fixed after you've had a few minutes to play with them.

Engineers like to solve problems. If there are no problems handily available, they will create their own problems. Normal people don't understand this concept; they believe that if it ain't broke, don't fix it. Engineers believe that if it ain't broke, it doesn't have enough features yet.

No engineer looks at a television remote control without wondering what it would take to turn it into a stun gun.

No engineer can take a shower without wondering if some sort of Teflon coating would make showering unnecessary.

To the engineer, the world is a toy box full of sub-optimized and feature-poor toys.

HONESTY

Engineers are always honest in matters of technology and human relationships. That's why it's a good idea to keep engineers away from customers, romantic interests, and other people who can't handle the truth.

Engineers sometimes bend the truth to avoid work. They say things that sound like lies but technically are not because nobody could be expected to believe them. The complete list of engineer lies is listed below:

- "I won't change anything without asking you first."
- "I'll return your hard-to-find cable tomorrow."
- "I have to have new equipment to do my job."
- "I'm not jealous of your new computer."

POWERS OF CONCENTRATION

If there is one trait that best defines an engineer it is the ability to concentrate on one subject to the complete exclusion of everything else in the environment. This sometimes causes engineers to be pronounced dead prematurely. Some funeral homes in high-tech areas have started checking resumes before processing the bodies. Anybody with a degree in electrical engineering or experience in computer programming is propped up in the lounge for a few days just to see if she [or he] snaps out of it.

RISK

Engineers HATE risk. They try to eliminate it whenever they can. This is understandable, given that when an engineer makes one little mistake, the media will treat it like it's a big deal or something.

EXAMPLES OF BAD PRESS FOR ENGINEERS

- Incentive Licensing
- Hindenberg
- Space Shuttle Challenger
- SPANet (tm)
- Hubble space telescope
- Apollo 13
- Titanic
- Ford Pinto
- Corvair

The risk/reward calculation for engineers looks something like this:

RISK - public humiliation and the death of thousands of innocent people.
REWARD - a certificate of appreciation in a handsome plastic frame.

EGO

Ego-wise, two things are important to engineers:

1. How smart they are.
2. How many cool devices they own.

The fastest way to get an engineer to solve a problem is to declare that the problem is unsolvable. No engineer can walk away from an unsolvable problem until it's solved. No illness or distraction is sufficient to get the engineer off the case. These types of challenges quickly become personal - a battle between the engineer and the laws of nature.

Engineers will often go without food and hygiene for days to solve a problem - other times, just because they forgot. And when they succeed in solving the problem they will experience an ego rush.

Nothing is more threatening to the engineer than the suggestion that somebody has more technical skill. Normal people sometimes use that knowledge as a lever to extract more work from the engineer. When an engineer says that something can't be done (a code phrase that means it's not fun to do), some clever normal people have learned to glance at the engineer with a look of compassion and pity and say something along these lines: "I'll ask Bob to figure it out. He knows how to solve difficult technical problems."

At that point, it is a good idea for the normal person to not stand between the engineer and the problem. The engineer will set upon the problem like a starved Chihuahua on a pork chop.

A numerical majority simply because almost all those so licensed
had no alternative. It was either pass a code test or no license
at all. Later it became (and still is) pass a code test or no
HF operation. As such, those that have a code license include
many that would have no support for code requiremments.

>   And in as much as the Technician Class is now only one of three

It shows that there is an every increasing number of hams that
don't see any reason to pass a code test.

> Not that we'd expect anything less.

Woudn't want you to be disappointed.

That's a funny kinda scale you got there, Len. You either need to have
it calibrated, or you need to try to keep your thumb off of it.

Really? If I were God, I wouldn't want to be on a code tape!
If I were God, I'd get together with all my other God friends
and have a big party. We'd all get drunk and create unliftable
rocks, then try to lift them. It would be loads of fun! Then I'd
probably just destroy the rocks with a lightning bolt. Then I'd
probably pass out. :^)

73, Hans, K0HB

Larry will never change. Technology has advanced in the area of superior modes, but his proselytizing is akin to having to demonstrate how to start a car with a hand crank in order to recieve your driver's license.

>> tested license classes.
>
>That's a funny kinda scale you got there, Len. You either need to have
>it calibrated, or you need to try to keep your thumb off of it.

Nice try, Jim, but let me cut and paste from my original post -

As of the end of December 1997, code-tested licensees
were 73.4% of the total, non-code-tested licensees were
26.6% of the total.

By the end of December 2000, code-tested licensees
were 67.9% of the total, non-code-tested licensees were
32.1% of the total.

=============

So...going from 73.4% in '67 to 67.9% in '00 for code-tested
and going from 26.6% to 32.1% for not-code-tested doesn't
indicate the scales are shifting? Amazing non-observation
on your part, Jim. Or do you just want to obliterate any
comments that cast doubt on newcomers not favoring code?
Jim

I believe your thumb is somewhere...and not on any posting.

>to get license is GROWING..?!?! Say it isn't so!!!

I said it was so. I've been saying so for some years.

What is your point...besides trying to start yet-another "battle"
in here on personalities?

> The only person wearing blinders here is YOU, Chump. You CAN'T
>(or worse, WON'T) see that Amatuer Radio is moving along nicely without
>you or your opinion. TOO BAD FOR LENNIE!

"Amatuer?" Is that anything like a Heath lunchbox rig on 2m?

On subtracting the overall gains from new Technician class licensees over the last 3 years, the remaining five classes show a DECLINE IN TOTAL NUMBERS. That doesn't mean that Amatuer (or even amateur) radio in the USA is "moving along nicely."

>   Must be TERRIBLE to not be wanted!

The whole subject is not about "being wanted." It is rather in pointing out what others have wanted...and that want is not morse code skill tested and approved with an official government merit badge.

>> If it weren't for the 1990 creation of the Technician class
>> license in the USA, the number of USA radio amateurs
>> would be DECREASING in number.
>
>   Prove it.

The proof is in the tabulation of publicly-available data on the AH0A website. Simply subtract the number of Technician class licensees from the total US ARS licensees. The total of all code-tested licensees is DECREASING.

>> Wrongo. The restructuring only removed three of six NEW-
>> license classes. Novice, Technician-Plus, and Advanced
>> classes are still in the US amateur radio database AND in
>> the revised Part 97.
>
>   And NOT being issued by the FCC. Novice licenses were essentially
>zero for years, Tech Plus was just a matter of an administrative
>update, making the Advanced Class the only real spoiler for your "no-
>code" arguement.

Really really lame response. I said that the FCC is NOT issuing any NEW Novice, Tech-Plus, or Advanced licenses. Quit trying to prove some point by rewording it.

Have the regulations in Part 97 eliminated the Advanced, Tech-Plus, or Novice licensees? No. They are still there in current law. The USA still has 6 classes of amateur radio licenses.

>> For those who have taken an overly-long lunch hour (perhaps
>> to another planet), the morse code test is STILL PRESENT in
>> US amateur regulations for General and Extra classes.
>
>   More "no kidding", Lennie. A whopping 5wpm, which will be ZERO
>wpm before too long, afterwhich your life will be TOTALLY irrelevant.

Define "too long," hotshot. WRC-03? How do you "know" that? There is nothing firm in ITU agendas or study group documents or FCC International Bureau agenda items that indicates ITU-R S25.5 will be discussed at all, let alone be voted upon.

According to the FCC International Bureau there will be some discussion at WRC-03 on S25. S25 is the entire set of amateur radio standards.

> Whoopie doo. After WRC-2003, that's probably going to change.

You can't know that.

For one thing, the recent ARRL BoD policy position was to NOT make any statements on what the FCC should do IFF ("if and only if") S25.5 were deleted. If the ARRL has any clout with the FCC then that policy position would have the FCC *KEEP* the code test even if the ITU-R S25.5 were deleted. [do you understand the significance of that or do you only want to fight about personalities?]

>KNOW you refuse to acknowledge it, but you just keep jousting at that
>windmill, Quixote. Sooner or later it will cry "Uncle".

ALL laws, rules, regulations may appear to be sturdy "windmills" that refuse to be beaten. However, all those laws, rules, and regulations were made by man...and can be eliminated by man.

It is not an quixotic undertaking in attempting to change law, Sancho Panza.

> Lennie, YOU are the last person in this newsgroup who has ANY right
>to whine about "personal attack commentary".

Poor baby. You want to strut around as a Dill Instructor and issue orders as if you had some USMC rank in here...and then accuse others of "improper behavior."

Tsk, tsk, tsk...nobody is Obeying the Dill Instructor.

But, big steebie HAS to make this a personal issue with -

> First and foremost because YOU are the Preeminent Abuser of the Ad
>Hominen Attack. You revel at it. We wouldn't be having THIS exchange
>if you weren't. So take your crocadile tears and stuff them.

Poor baby...you want to Issue Orders and then get all bent out of shape if someone comes on back IN KIND and shoves it back down your throat. Tsk, tsk, tsk, tsk....and tsk.

> Secondly, I am not the one trying to "win" anything here,
>Anderson. I HAVE a license. I AM an Amateur. I HAVE all those perks
>and priviledges that having taken all those tests conveys.

Oh, my, yes. :-)

Poor baby is suffering Lack of Respect Syndrome?

I started this particular thread regarding newcomers opting for what in USA amateur radio. Based on publicly-available data as tabulated by Joe Speroni on his website (AH0A is a fan of morse code). This thread was NOT about big Steebie or his accomplishments, didn't even name Robeson or even hint at that noble eminence.

That the US ARS newcomers are NOT opting for morse code has nothing whatever to do with personal viewpoints of anyone who is already maximally "upgraded" in licensing.

> You DON'T have a license because you have neither the guts nor the
> character to do it, and I am tiring of your incessant whining and
> hatred of Amateur Radio.

Poor poor little peurile creature still trying to taunt and belittle newcomers or maybe-comers as if this were the USMC.

It's sad that the maximally-upgraded non-comms of US amateur radio have sunk to such a level. One could well imagine these militaristic patronistic self-elevated knowitall jerkoffs demanding "blood pinning" to prove their amateur radio worth.

Get this through your cartilage-filled cranium, Steebie, I have NO repeat NO "hatred" of amateur radio. I once had thoughts of getting an amateur license to round out my commercial license and have some fun in retirement. Those thoughts have been repeatedly dashed for around two decades by the self-important, self-appointed non-comms of US amateur radio who keep insisting that all newcomers have to de exactly as they did or be the subject of all kinds of personal abuse.

Now, it is my experience that MOST radio amateurs are not the self-important, self-appointed non-comm Dill Instructors of some kind of US Amateur Marine Code Corps...but there are just enough of YOU around to make it unattractive to many..

> Now, run along, loser. Your troll is kaput.

The original starting message of this thread was not a troll, but rather a refutation of some statements made by some self-important, self-appointed non-comm Dill Instructors in other platoons of the US Amateur Marine Code Corps.

Now put on your campaign hat and run some code cadets through some close order drill. Try to stay out of discussions of radio regulation changes and, certainly, radio theory. You can't handle either.

It's the SUBJECT, not personalities stupid.

didit

PS: "Non-comm" is an individual who cannot communicate
in any reasonable discussion other than to denigrate and
villify those persons who do not share the non-comm's
viewpoints.   A "Dill Instructor" is the self-styled non-comm
who struts around shouting Orders To Be Obeyed as if the
amateur radio service were really a Military Service.

> > Personally, I have complete contempt for what ham radio has turned into.
>
> We know that, Larry. But the only thing that has changed about ham radio is that the artificial pecking order of license classes has been deemphasized. Ham radio is still what its participants make of it. You still have authorization to use a wide variety of signal types and operating techniques on a wide selection of frequency bands. There still are many people interested in that wide variety of activities with whom to consort. If part of what you derived from ham radio was the I'm-better-than-them ego boost provided by your position in the license structure, ham radio's benefit to you has indeed been diminished. That frankly doesn't concern me since ego boosting isn't the purpose of ham radio.

Jon, there's sure nothing artificial about that boatload of nonsense, it's the real thing for certain.

When the Extras of today are commonly licensed with no more technical nor code qualifications than Novices of old, and nothing has changed but some vaporous "artificial pecking order"??
You know the appropriate descriptive word - and it isn't bullfeathers.

Dick

Meaningless, Bill.

We are now into our 11th year of the "no code" era. And with the exception of a brief explosion of new licensees in 91-92, the "growth rate" of Amatuer Radio has hardly been "stellar", and barely above attrition.

The NCT has NOT been the "growth hormone" it was cast to be at it's inception. Is it beneficial...?!?! Of course it is. But it's NOT been the "fix all" that it was forcasted to be at it's onset.

Lennie makes some deal about how this is the "fastest growing class" of licensee. Well, I'd say that it's NO WHERE close to being where it COULD be, and it's NOTHING close to being some revoloution that Lennie claims.

You said that the code tested licensee's were that way because they had no other choice.

I suggest you go back and research the demographics of the current TechPlus and above licensees and look at the dates of thier entry to Ham Radio. More than half of that 66 2/3 HAD a choice.

73

PRIDE comes with motherhood or fatherhood but there are no classes required to become a mother or father....unless you want to count optional sex education from Dr. Ruth.

> How many license classes are needed for hams to be able to construct
their
> own gear?

NONE.

All Hams are permitted by law to build anything that they want to build and this includes Radio transmitters, provided that the transmitter outputs comply with FCC regulations (It does not include propriatory descramblers or items that could be used by spies which might be deemed illegal or a threat to national security). BUT do hams want to build anything themselves if they have no confidence that they are smart enough to do so? Are most US hams in favor of having the state of the Ham Radio art advanced solely by Japanese hams?

BUT many more license classes are needed for hams, as a group, to comply with the goals of the basis and purpose of amateur radio. This is now especially true because President George W. Bush wants all levels of education to be accountable. "Accountable" means taking appropriate written tests to establish all standard levels of education. Pres. Bush says this was necessary in Texas and is also necessary in the entire USA, since the value of education available can not meet national goals without such tests. If ham radio is to be exempt then it must admit that it is no longer a worthy educational hobby. If it is not to be exempt then we need more tests. If a majority of Hams can not pass the tests...I'm sure that Pres. Bush wouldn't want to take away their licenses or privileges. Hmmmm...Maybe we can get the federal government to issue vouchers so that Hams can get "better" Ham Radio classes at the church of their choice.

Nah...Maybe many Hams are in favor of separation of signals from noise, communication from spam...and church from state.
>

Please keep thinking...and don't hesitate to post if you have any more questions.

73, Bob Wex w2ilp (Intelligent Learned President?)

Folks are dumb,
Whar I come from,
Bout schools 'n books n' lernen.
Still they die at ninty-three...
Doin' what comes naturally.

Hams radiate,
Procrastinate,
And don't check their Vis-warh.
They can't live to ninty-three...
Knowing less that a cee-bee.

Hams got dumb,
Where I come from,
No building and no learning,
Still licensed by the eff-cee-cee...
Doing what comes naturally.

George W. Bush is NOT advocating adding more grades, or more diplomas.
But if he felt it would improve the quality of education, I'm sure he
would.

Oh, that's hogwash. Go answer all the questions in all the pools cold
turkey, and then tell us about a worthy educational hobby. When was the
last time you took an FCC test anyway, Wex?

And therefore, what, ham radio should offer more certificates?  I only
got one high school diploma.  Would I have been better educated had I
been offered three or four?

"This one goes to eleven."

How many classes and tests did you need to take before you were able to
read so well Jim?

Hams need more license classes.

When/if that happens, you would have a point. My 1957 ARRL License Manual
had 3 pages of Novice Q&A. My pre-April 15 ARRL Extra License Manual had
94 pages of Q&A. How you can believe 3 equals 94 is beyond belief.

  The URL wrapped into two lines.  To open the page, you'll have to
```

copy both sections of the URL into the location block and then hit return (enter).

However, to save you some time, I'll give you a brief review. The page contains a letter from John S. Rippey (W3ULS), to the FCC. The letter is supposed to be about "re-allocation of certain sub-bands," but the author distracts from that with constant references to various license classes. For example, he ends the letter with, "...the Novice, Tech Plus, etc. licenses are hybrids of dubious value that deserve to be put out of their misery."

Obviously, since the letter was dated January 2001, Rippey doesn't make much of an effort to keep up with current events - the Novice and Tech Plus licenses were dropped from the current license structure almost a year ago. In time, even the various sub-band allocations will be dropped as the number of current license holders in those classes eventually decrease.

He also doesn't seem to know much about the old license structure either. For example, in one sentence, he refers to "Technician Plus licensees as well as Technician licensees who have passed the 5wpm code requirement." That is the same thing - a Technicion Plus is a Technician that has passed the 5wpm code requirement.

The idea of Novice sub-band reallocation is sound, but, in my opinion, it is a bit premature (there are still too many people using those sub-bands). Perhaps in another year or two.

I've always been a MUGWUMP on the subject of retining the CW exam
speeds...but it seems to me that you, Ed, are neglecting the facts.
There is no longer a Novice Class... because when there was, there were
few applicants...BUT Another way of looking at it: IS that now many
Generals are really at the old Novice level!  CW wise the General
license is really a Novice license with a different name and a few more
multiple choice fixed Q & As.  It is like the reading groups in first
grade.  Naturally the teachers don't want to kill the kids self-esteem
or give them swelled heads by calling the groups "The Slow Readers'
Group" and "The Fact Readers' Group", so they call them "The Bluebird
Team" and The Owl Team" or whatever.  The Extra Class license might
actually be thought of as the old Advanced class license with a
different name.  That is why I believe that we need more classes of
license, in order to really provide for the technical diversity within
the hobby.  We need a even easier entry class for really new novices
(small n) and we need more expert classes for the more really
technically advanced hams.  We need kindergartens and high
schools....Head starts and advanced classes...Very few people, who have
been trained to be educators, would deny that.

Let me get this straight Dick...you are saying that the technical
content of the novice test I took in 1957 had the same technical
content as today's Extra test?

Cheers,
Bill K2UNK

If you are a chef, then all you may need to know is that the chicken
got cooked to your liking...BUT if you are a scientist or engineer you
need to know a lot more; and if you are afraid that the chicken was not
cooked well enough to kill the bacteria in it, you work with scientists
and engineers; You don't care much about what a chef might think
because he doesn't understand the MECHANISM, nor the cause and effect
of the groth of bacteria populations in what might be pockets of
relatively raw chicken. The chef might not even be able to smell or
taste bad chicken that is dangerously tainted. Worse he might attempt
to cover up bad chicken with gravies that hide the rotten, stinking
chicken and make it profitable to do so.

Some of the "experts" who talk about what are considered RF hazard

levels are no more scientific than old grandmothers who think that chicken soup will cure any illness. True, chicken soup might have some healthy benefits for some minor ailments...but the old grannys who make it don't know much about the spread of bacteria that exists within humans and certainly aren't aware of the latest reasearch about the AIDS virus. Chicken soup might just have a psychological beneficial effect on some humans...others might be better off with mock clam chowder or mock turtle soup....or some real Johnny Walker.

When you design electrical devices there are certain intrinsic conditions that must be delt with. There are physical limitations that involve the actual fabrication of resistors, conductors, insulators, etc. (although I admit the human body is much more complex than an electrical resistance path)...
BUT
WE need to know the mechanism by which hazards can be hazardous before we can determine what the safe levels are...just like we need Ohm's Law before we can design for appropriate resistances, voltages and currents that can make a circuit function as we intend it to.
True, we can not reengineer humans yet...although genetic manipulation may not be out of the question in the far future...BUT we need to design RF radiating equipments (including cell-phones and Ham HTs) so that they are safe for use by humans IF this is possible. On the down side, it might not be possible....just like it has not been possible to manufacture a truly safe cigarette that is still a cigarette.   We can not just think of the human body as a dummy load for RF...nor can we just think of the overall thermal effects on the body, without knowing the mechanisms that have dangerous propensities. Considering only thermal effects will definately prove to be a gross error. If the RF can be more consentrated on vulnerable parts of the human body at UHF than at VHF then this would not be a consideration if only thermal effects on the entire body are all that is being considered. It is a known fact that heat is generated when RF causes electrons in certain molecules to be agitated. (Heat is actually defined as electron agitation) BUT the effects of agitating electrons in the material that constitutes human tissue of various functions is poorly understood. What levels, at what frequencies can cause genetic damage? What can cause or accelerate cancerous malignancies? What tissues are most vulnerable? Can some individuals be more at risk than others? All

must be considered before setting any safe radiation level standards.
Although the research continues, we have been permitted to work with
standards that may be considered conservatively safe by
some "grannys"...BUT not by W2ILP.

I admit that I dunno at this point in time... nor does N9GL. Let us
leave it at that.

> terms.
```

If I understand what you are saying, "sampling rate" is just a term used to describe analog systems in digital terms. Well, that's a peculiar view. The purpose of sampling is to transform continuous-time (analog) data to discrete-time data so that it can be processed by discrete-time systems (digital computers). That is far more than just a theoretical exercise. It has practical, real-world application.

Of course it is possible to build a radio without sampling. No one said it wasn't. But that's not the question. The question is, does building radios that make use of sampling have anything to do with ham radio? When people build radios for amateur use that do use sampling, are they not pursuing ham radio? I think so.

Look, of course it's not necessary for hams to understand sampling in order to pursue ham radio. What I don't understand is why you react to Cecil's prodding by taking the polar opposite view that says that technologies that are in use in ham radio but that are not the technologies you prefer "have nothing to do with amateur radio." Im my view, that is not one whit different from those who denigrate CW because it doesn't interest them, which attitude you have decried more than once.

Jon

Welcome to alt.oldjoke! Why does everyone think they are the first person to hear a joke? One thing I can't stand about internet 'humor' is that everyone tries to rewrite the old joke to make it ten times as long. For some reason that's supposed to make it funnier?

Jon, I think Cecil's point flew right past you. He indicated that a Phd EE automatically knows more about ham radio than a ham without the degree. I say nonsense. I'm sure you could easily find a Phd EE who knows all about sampling rates but who has never heard of ham radio.

Dick

I've known many EEs whose knowledge of ham radio was scanty. Just
because I disagree with something you said to Cecil doesn't mean I agree
with him. If you had said that an understanding of sampling rate was not
needed in order to participate in ham radio, fine. But when you said it
has nothing to do with ham radio, I just had to disagree.

You're the one who is unhappy and trying to divert attention from
the present requirements for an Extra License back to what they were
in the past. I'm completely happy with the present situation.

There are a couple of ham transceivers already on the market using that
generic technique, Dick. If you weren't living in the past, you would
know that. In the future, more and more top of the line amateur radio
transceivers will use digitized IF techniques.

Dick, Dick, Dick, most top of the line ham transceivers use sampling
rates right now. A few of them sample at the IF frequency. Even my $1000
IC-706 uses sampling rates. Any Extra who doesn't want to understand
sampling rates chooses not to understand modern day ham radio. You are
burying your head in the sands of time. As time moves on and progress
happens, more and more of your precious analog functions will be
replaced by DSP techniques.

That might be useful at the depth of the sunspot cycle. :-)

Really?

Go down to the r.r.a.p. machine room and tell them to empty the
bit bucket, and FAST, before that baby overflows.

Not exactly. They pulled the trigger and the hammer fell on an empty
chamber. The same as your empty promises of how useful and necessary
the Morse code is. Seems even you think it doesn't have enough merit to
stand on its own.

First off, any competent-in-DSP bench technician (let alone PhD EE)
would scoff at 455KHz as a proper IF choice for DSP techniques.

Second, that same technician would scoff at the simplistic nature of
your question, in that it displays a basic ignorance of the information
needed in determining what sampling rate to employ.

Actually it has a lot to do with how many downconversions have to be made before an ADC can convert the signal for use by a DSP. Right now the DSP rigs have "IF" frequencies in the audio range. It would be nice to be able to do DSP up at the front end of the radio, but the sampling rate is too high for currently available technology. Prolly won't be long though. Nyquist had something to say about Cecil's question I think.

Actually, as Jon pointed out, my question was poorly worded. It
is possible to recover the audio modulation on an RF carrier
by sampling at a rate below two times the RF frequency.

A source of links to many other sites having tutorials, references,
glossaries, etc. is

      http://www.eevl.ac.uk

...a UK site maintained by Edinburgh University (?, U of E?). The amateur radio links are handled by a US photographer-ham.

The Carroll-mentioned site is "Integrated Publishing" which has a number of "courses" which are copies of older US Navy instructional textbooks. While good, they can be termed "knock-offs" in the publishing trade since US government info is not copyrighted. Almost everything publicly published by the US government can be scanned, duplicated, published at will. [Case in point is the long-running "J. K. Lasser's Your Income Tax" softbounds that used to be on newsstands...almost entirely a knock-off of free US IRS documents]

The average amateur can better spend their time studying the ARRL or RSGB amateur handbooks, get the same information and considerably more about amateur radio in specifics than someone's copying of a US government tutorial.

>That little tidbit has absolutely nothing to do with amateur radio. The
>fact that some receivers use a 455 kHz IF might.

On the contrary, with a progression towards digital techniques,
receivers can and do use sampling and subsequent Digital
Signal Processing for both demodulation and "brick-wall"
filtering for the absolute least possible receiving bandwidth.

The normal sampling rate for a 455 KHz IF would be above
the "Nyquist limit" or roughly 2 1/2 times (minimum) rate of
the IF (1.138 MHz, minimum) for an accurate sampling.
That will reproduce the IF accurately enough to permit
digital demodulation.

There are techniques called "undersampling" at rates less
than the IF center frequency but those generally go into
non-standard (even for DSP) techniques which take a lot
more study of that part of technology.

For a good introduction on DSP there is the ARRL Handbook
section on it, written by Jon Bloom. Good stuff, but one has
to buckle down and STUDY it to grasp what is possible.

The ARRL Technical Information center on the League's
website has some very good articles using sampling and
DSP in amateur radio, written by radio amateurs. Free PDF
downloads for members or non-members. [hats off to the
ARRL for that whole website section!]

...or...one can vegetate amidst perceived past glories of
learning things a long time ago and ignore all the
state of the art advances that keep happening...and rely
on the designers and manufacturers to keep turning out
ready-built equipment using new techniques and complain
about front-panel controls that aren't like your old radios.

```

In driving around yesterday I saw two vehicles with ham plates,
drivers appearing about thirty-something. The customers at
the Burbank, CA, HRO branch store seem to be under 50 as
a general rule.

In order to find "younger people," one has to get out among
the public, not staying with the "old crowd" (of like-minded
people).

```

>HF ham license who are generally considered to be lazy. Got it?
```

So...you feel that the "non-lazy" people have to get out there to
struggle and work like you did? Are you the model of what
everyone "should be?"

I saw Ed Hare's posting of the old Novice Study Guide. Couldn't
be any simpler than that. Seems like the old Novice test itself
was very simple at that time, wasn't it?

Is amateur radio supposed to be all about using CW on HF?

>> > I truly am sorry that times have changed so much, and more's the

>> radio you once did. Perhaps it is not the times that have changed, Dick.
>
>It's the times, Ed. I could be more comfortable with it if I had changed
>more myself.

I went through the same "times" as everyone else and don't see
any of this "dumbing-down" or the "laziness." Everyone should
attempt to adapt to "times" which are constantly changing. The
"times" don't stop for those who give up adapting. The "times" are
not geared for those who think that everything was for them alone.
Why are you so insistent on holding everyone else back to your
standards?

Do you realize that it is possible to recover the information by
sampling at a rate lower than 910,000 samples per second? I doubt
that the scoffing technician knows that. The scoffing technician
would probably say that violates the Nyquist principle.

> Second, that same technician would scoff at the simplistic nature of
> your question, in that it displays a basic ignorance of the information
> needed in determining what sampling rate to employ.

It was poorly worded. However, the meaning of the question was not
simplistic. You don't have to sample at 910,000 samples per second
to recover all the information assuming all the information is
riding *on* the carrier and not embedded *in* the carrier.

>
> > Jon, I think Cecil's point flew right past you. He indicated that a Phd EE automatically knows more about ham radio than a ham without the degree. I say nonsense. I'm sure you could easily find a Phd EE who knows all about sampling rates but who has never heard of ham radio.
>
> I've known many EEs whose knowledge of ham radio was scanty. Just because I disagree with something you said to Cecil doesn't mean I agree with him. If you had said that an understanding of sampling rate was not needed in order to participate in ham radio, fine. But when you said it has nothing to do with ham radio, I just had to disagree.

Jon, what I said was "That little tidbit (of information) has nothing to do with ham radio". And it doesn't. I didn't say that sampling rates have nothing to do with ham radio, I said that his little snippet of information does not.

A case could be made that says anything electronic has something to do with ham radio, just as one can - and is now being donein several imnfluential circles- that theory in general has nothing to do with it.

Not all codes are supported through governmental force, Dick. Most
codes stand on their own merits in a free market economy.

What does THAT mean? I've never before heard a distinction made between information "riding on" a carrier and information "embedded in" a carrier. Can you describe both a "riding on" modulator and an "embedded in" modulator?

Oh, by the way, the sampling rate that satifies Nyquist for your 455-kHz IF is the rate that is twice the bandwidth (not center frequency) of the IF, although practical difficulties may require a somewhat higher rate.

> digital demodulation.

I'm not sure where the 2-1/2 value comes from. Some rule of thumb, I suppose. But the Nyquist frequency is 2 times the highest frequency present in the signal being sampled. For this hypothetical case of direct sampling (no undersampling) a 455-kHz IF, you would select the IF filter attenuation that reduces the signal to a negligible level (say 90 dB attenuation, just to pick a number), find the frequency of the 90-dB point on the high side of the filter, then double that frequency to find the minimum sampling frequency. That's likely to be below 1.138 MHz unless your IF filter is 200 kHz wide (unlikely for a 455-kHz IF).

But if you have a sampling A/D that can sample at a MHz, you can undersample at a rate at or above 2 times the IF bandwidth (the 90-dB bandwidth, in this case) and save yourself the need to decimate the 1-MHz sampling rate down to something more tractable. There is nothing the least bit tricky about undersampling. One of the first tings I did when I got my first TI DSP evaluation board was to undersample the IF output of my TS-930 and make my own DSP SSB demod.

You said:
> *SAYS I*, of course.

So, you're right, you didn't say sampling rates have nothing to do with ham radio; you said they have nothing to do with *amateur* radio.

>   A case could be made that says anything electronic has something to do
> with ham radio,

Yes, at least any part of electronics that has to with radio communication. That's pretty much my point in a nutshell.

> just as one can - and is now being donein several
> imnfluential circles- that theory in general has nothing to do with it.

I don't think that case can be successfully made. Nor am I familiar with the influential circles where making that case is being attempted. Can you be more specific?

Jon

If you are dealing with an IF signal, under sampling is the only practical way to go, couple it with a brick wall filter. This allows a sample rate related to the bandwidth as opposed to frequency.

Fs=0(2BW)<<2F/h

If your interested, I would be glad to post the DSP section of a receiver I have been building.

Okay then.

Please change my statement to: Nyquist had nothing to say about Cecil's question.

You never heard of a Z0-match before our email interchange, either. (I still have a copy of that email.) And if I remember right, I'm the guy who taught you about the Goertzel algorithm.

Bell 103 is an example of information riding on a carrier.
CCIT V.36 is an example of information embedded in a carrier.

In general, if the BPS rate is less than the frequency of the tone, the information is riding on the tone, e.g. FSK. In general, if the BPS rate is higher than the frequency of the tone, the information is embedded in the tone, e.g. M-ary-QPSK.

One can undersample an average FSK signal and still recover all the information. I don't believe one can under-sample an M-ary-QPSK signal and still recover all the information. But I could be wrong since I haven't looked at this stuff since I retired. (The latest Science News reports that scientists have figured out how to make water flow uphill. :-)

> Oh, by the way, the sampling rate that satifies Nyquist for your 455-kHz
> IF is the rate that is twice the bandwidth (not center frequency) of the
> IF, although practical difficulties may require a somewhat higher rate.

Depends on the boundary conditions. You cannot closely re-create the 455 kHz IF frequency waveform unless you honor the Nyquist requirements for the highest existing frequency and that's usually higher than double the bandwidth. There are naturally occurring phase shifts in the 455kHz carrier signal which cannot be duplicated with under-sampling. Like my original question, you neglected to state your boundary conditions.

Right there shows the true degeneracy of your character. My mother wouldn't touch a lazy slob like you with a ten foot pole. Furthermore, my mother wouldn't be caught even talking to a piece of white trash like yourself. My mother has good morals and has religious beliefs. It just shows how much of a piece of garbage that you really are. As far as being grossly obese, I am six foot four and 230. Not to mention very well built and quite agile. I do a lot of stuff like basketball and other sports. Something that a lazy assed 45 year old doesn't do. Oh, thats right you just talk about having sex with other peoples moms. You are a real brilliant one and not to mention a 45

```
year old loser. Nice job on showing your true colors. .

No, I first read about that in a book -- TI application manual, I think.

I think what you are groping toward is the difference between a signal
that has components down to dc and one that does not. I've never heard
it expressed as "embedded in" or "riding on" a carrier, though, in any
of the engineering texts, reference books, application manuals or
product data sheets I've seen. Can you provide any references for that
usage?

> One can undersample an average FSK signal and still recover all the
> information. I don't believe one can under-sample an M-ary-QPSK signal

> haven't looked at this stuff since I retired. (The latest Science News
> reports that scientists have figured out how to make water flow uphill. :-)

If you can resolve all of the frequency components of the signal without
aliasing you can recover the information. If the frequency components
extend down to dc, you have to sample at twice the highest frequency in
the signal. If the signal is bandlimited around some center frequency,
you can sample at a rate of twice the signal bandwidth. That's true
regardless of the modulation type.

> > Oh, by the way, the sampling rate that satifies Nyquist for your 455-kHz

> the bandwidth.

That simply isn't true. A sampled signal is replicated around multiples of the sampling frequency. Thus you can generate a copy of the sampled signal at a frequency many times greater than the sampling frequency. Undersample your 455-kHz signal and then examine the spectrum of the sampled signal. You'll find that the original 455-kHz components are present in the discrete-time signal (along with many replicas at other frequencies). If your sampling rate exceeds twice the bandwidth of the 455-kHz signal, ALL of the original components, undistorted by aliasing, will be present in the sampled signal.

Jon

Funny, when I asked you a question about it during your presentation at
Hamventure, you seemed not to know what I was talking about.

> I've never heard
> it expressed as "embedded in" or "riding on" a carrier, though, in any
> of the engineering texts, reference books, application manuals or

It was common knowledge/language in the DSP group at Intel.

> Can you provide any references for that usage?

Sure - 14 lines above.

> If the frequency components
> extend down to dc, you have to sample at twice the highest frequency in
> the signal.

Son of a gun - that's what I thought. They haven't changed physics in the
past three years.

>
> That simply isn't true.

You're contradicting yourself, Jon. You just admitted above that to get all the
components down to zero Hz, you must sample at twice the highest frequency in
the signal, i.e. you must honor the 2x Nyquist sampling requirements. In order
to "closely re-create" the waveform, one must have *ALL* the components. There's
no such thing as a free lunch.

Cecil:

I have no problem understanding the merits of CW.  My problem
is with the prospective hams who will no longer be required to learn
it in order to gain maximum HF privileges.  I favor the incentive of
the multi-tiered licensing system, including the 3-level code speed
tests, because I believe this is what brought people into the mode.

>would operate at that speed I'll never understand. Selective memory
>perhaps. My first CW QSOs were on my old 2 meter IC 211 - at sub-5WPM
>speed - when I was a Tech.

Jim/Cecil:

Yes, I did make the same 5, 5.5, 5.9, 6.6, 8.2, 10.0 etc. WPM QSO's as everyone else did. My speed increased incrementally with virtually each QSO. I also did a lot of practice copying from the W1AW code bulletins. My progress was swift; I was comfortable at 18 - 22 WPM within a few months. However, if the maximum testing requirement stopped at 5 WPM -- then my progress would have stopped there as well. I was not a motivated and dedicated CW user at the time; that desire came only with the added proficiency came, and that was motivated MAINLY by the requirement. I don't think I'm much different than anyone else in this respect, except that I seem to be more willing to be truthful about this than the code (test) bashers are. This is why I believe that in the absence of a "real" code testing requirement, there will be little or no future growth in the number of users of the Morse/CW mode. Those who support the elimination of the requirement, and the re-allocation of Morse/CW spectrum to phone, know this as well, but can't admit it.

No, just Cecil's perspective on them. And I don't think that's worth an
article.

Only if there ARE components down to zero Hz. In the case of your
455-kHz signal, no signal components exist below the low end of the IF
bandwidth. That's why we can use harmonic sampling.

> In order
> to "closely re-create" the waveform, one must have *ALL* the components. There's
> no such thing as a free lunch.

Yep, but "all the compoments" exist in a small band of frequencies, not
a band 455-kHz wide, and that bandwidth can be sampled and
reconstructed, according to Nyquist, using a sampling rate twice the
bandwidth.

Jon

Well, hoopty lolly doo! You got a 706 with the *audio* dsp! I've had a
series of those in the past several years and have yet to find any
working advantage in any of them. The one on the IC756 stays turned off,
I haven't yet found any situation where I can say it is helpful to the
point that I would have paid what it cost to build it into the rig.

Any Extra who doesn't want to understand
> sampling rates chooses not to understand modern day ham radio. You are
> burying your head in the sands of time.

So what's your problem? I do understand the basics of DSP sampling and
have no desire nor intention of designing one for myself - I am not a
digital designer and have no intent to ever become one. That I'llleaveto
you who profess to be digital engineers. Since I'm not an engineer and
you are, you slam me because I'm not, while your status as an engineet
doesn't make you any better a ham. Fact. You're just a better digital
designer. That's the way it is.

As time moves on and progress

Really? Sometimes, in the case of a DSP adapter to work off of
an existing receiver that has a 455 KHz IF, there isn't any choice.

Please examine the IFs of existing cellular telephones and
see what those Intermediate Frequencies are...rather higher
than 455 KHz these days.

>Second, that same technician would scoff at the simplistic nature of
>your question, in that it displays a basic ignorance of the information
>needed in determining what sampling rate to employ.

Now, now, let's not get testy here... :-)

Going back over three decades to the appearance of the first
sampling oscilloscopes, those all used undersampling (using
today's terminology for yesterday's accomplished art)...i.e.,
the sampling rate was wayyyy slower than the rate of the
RF being sampled.

>I'm not sure where the 2-1/2 value comes from. Some rule of thumb, I
>suppose.

Yes, pre-IC times. The old GE 24-voice-channel microwave radio
relay terminal used pulse-position modulation converted after
detection to pulse-width modulation. At about 8 KHz pulse
repetition rate, the modulated pulse width was tossed into a
3 KHz low-pass filter to recover the modulation audio. 1950
production stuff with tubes. Army version was AN/FRC-23.

>But the Nyquist frequency is 2 times the highest frequency

>unless your IF filter is 200 kHz wide (unlikely for a 455-kHz IF).

Yes, I'll agree that the Nyquist minimum has to hold for a
maximum modulation frequency. :-)

[If one isn't used to it, trying to "see" the process through the math
isn't a trivial task when working from the original Carson (?)
modulation equations]

Minimum signal level would be dependent on the A-to-D of the
sampler. Nowadays a 16-bit A-to-D at 0.5 MHz sample rate
is not an unreasonable requirement...the least-significant bit of the
sampled digital signal voltage would be about -96 dbc.

>But if you have a sampling A/D that can sample at a MHz, you can

>the least bit tricky about undersampling. One of the first tings I did
>when I got my first TI DSP evaluation board was to undersample the IF
>output of my TS-930 and make my own DSP SSB demod.

Sounds interesting and would be good material for an article
somewhere?

Older sampling oscilloscopes were ALWAYS running in an
undersampling mode...as were the undersampled PLL-ed
microwave frequency sources...around mid 1960s for the
first of them. I still have a problem with aliasing on the
analysis, though. [personal analysis work, used both, no
problem, specified and bought the sources for a couple
contracts]

Might be a picky detail here, but the sampler aperture time
has to be quite a bit shorter than the sampled signal period.
[got that impression when I saw an 8 GHz sinewave being
sampled at the H-P display at a 60's WESCON...:-)]

If the sampler can't hold the signal after sampling due to way
longer sampling, then a second sampler has to be used to
keep the sample charge long enough for the A-to-D to convert.
[in the old sample-and-hold input circuits, at least...]

There's still an aliasing problem if the sampling is too close
to an integral number of either the RF or the modulation
frequency, yes? Remind me if not, please...haven't gone
deep into undersampling hardware-software.

tRoll;

The FCC grants US amateur radio licenses. THEIR requirements
insofar as licensing is concerned is what counts.

The FCC has already said (1990 and 1999) that it doesn't think
a morse code test is significant for THEIR licensing criterion in
US amateur radio. They also stated that the only reason one
is necessary is the ITU-R standard S25.5.

Neither you nor I nor anyone else in here can know the future
with any certainty. Morse code may achieve a great popularity
in the future...or languish into disuse...or simply go on as it
does now...or none of those.

There is NO technical reason for the retention of a code test,
no administrative reason on the part of the FCC. All that
remains is some artificial-emotional standard of some
individuals that a "code test is necessary to prove something."

The FCC doesn't think a code test "proves" anything to them
for the purposes of granting a US amateur radio license. The
FCC has said so...twice in a decade.

What government bureauocracy??? The VECs are private (non-government)
voulenteers.

> 73,
> Ed Hare, W1RFI

Perhaps more technical knowledge would give individual Hams real reason
to have more self PRIDE...and
OFFICIAL FCC Ham Exams, which challenge hams to be motivated to have
more technical knowledge would eventually give All Hams, as a group
more PRIDE.
Nothing short of that will do.

Hams need MORE OFFICIAL FCC License Classes.

73,
Bob Wex w2ilp (Increase License PRIDE)

There is something about a bureaucrat
that does not like a poem.
--Gore Vidal (1968)--

The only thing that saves us from the
bureaucracy is inefficiency. An
efficient bureaucracy is the greatest
threat to liberty.
--Eugene J. McCarthy (1979)--

I wonder if Eugene McCarthy liked
poems??? History now relates that
he was, in his hay-day, a great
threat to liberty.
--w2ilp--

Bush want all students tested so
that schools can be held accountable
for test results. Maybe all hams
should be retested so that the ARRL
can be held accountable for the
loss of what once was a national asset.
Maybe not.

>
> 73, Jim AC6XG

With all due respect, I am not talking about your feelings Jim. I am speaking about what is required so that FUTURE Hams can regain the PRIDE that the hobby once had. A certificate that says that you worked all states, all zones or a hundred nations may be wallpaper BUT a license that says that you passed really comprehensive technical exams can restore the kind of pride that once had value to academic, commercial and military establishments. Such a license could command real respect, not for just individual hams, but for Ham Radio as the technical educational hobby that it once was and should be. To do so there has to be a lot of technical catching up for the Hams who want to have the pride of being known as Ham Experts.

Yes...
Hams need MORE license classes and/or official FCC endorsements so that they can show [by certification] that at least some of them have the potential of being radio communications experts.

73,

Bob Wex w2ilp (Insure License Potential)

I know of no safe depository of the ultimate
powers of society but the people themselves;
and if we think them not enlightened enough
to exercise their control with a wholesome
discretion, the remedy is not to take it
from them, but to inform their discretion
by education. This is the true corrective
of abuses of constitutional power.
--Thomas Jefferson(1820)--

Ham Radio can only be saved by Hams themselves.
The FCC may take away their frequency bands if
they are unable to prove that they are
potentially able to meet the goals as outlined
in the BASIS and PURPOSE of Part 97. The
only protective action is accountable ham
education. Ham education is being abused by
those who are unwilling and unable to modernize it.

Mine performs miracles. The point is that DSP, both audio and at RF
frequencies, is an expanding part of ham radio. If you refuse to learn
about DSP, you will become even more ignorant than the newcomers.

> So what's your problem? I do understand the basics of DSP sampling and

The point is that as time moves on and designs progress, ham radios will become more and more digital until you will be totally ignorant. You will be like the hams who refused to learn anything about SSB in the 50s.

That's like looking for your lost keys under a street light instead of where you lost them. I can phase modulate at the IF frequency and slip an undetected message right past your undersampling technique.

We know that, Larry. But the only thing that has changed about ham radio is that the artificial pecking order of license classes has been deemphasized. Ham radio is still what its participants make of it. You still have authorization to use a wide variety of signal types and operating techniques on a wide selection of frequency bands. There still are many people interested in that wide variety of activities with whom to consort. If part of what you derived from ham radio was the I'm-better-than-them ego boost provided by your position in the license structure, ham radio's benefit to you has indeed been diminished. That frankly doesn't concern me since ego boosting isn't the purpose of ham radio.

Jon

Cecil:

I'm giving up hope that you can ever get anything right. The "government welfare" program is the reduction/elimination of code testing, not the other way around. It is pandering to lazy, unmotivated slouchers -- which is what welfare programs do! If you don't understand the difference, then you're credibility just went completely down the drain!

Dwight:

Hmmm. Just what *are* the "contributions" of these newly licensed hams you're talking about? Specifics, please -- include any relevant documentation -- news articles, media releases, etc.

> Those newly licensed operators include my wife, myself, and the many
>thousands of other decent people whose only ham radio "sin" is that we
>didn't obtain our license in the same manner as Larry.

Hmmmmm again. Just where did I state that "newly licensed operators" were not "decent people?" Please provide quotes from Deja.com.

> Now, I'm sorry if Larry does not like how I obtained my license,

I could care less how you obtained your license, Dwight.

but
>he is a damn fool if he thinks I'm going to give it up just because it
>makes him "upset."

The way you obtained your license does not make me upset and I wouldn't dream of asking you to give it up. You struggled and suffered through those not quite insurmountable licensing requirements, and I feel you've earned your place in today's ARS. You can be duly proud of your astounding achievement, in light of present day standards and expectations. If you were here right now, I'd pat you on the back!

>And he is equally a fool if he thinks we're going
>to feel sorry for him because he is "upset" about the reduced code
>requirements.

Again, I am not "upset." The code requirements were there for me to achieve, and the fact that they are no longer standing in YOUR way makes me happy for you! I got to prove something to myself and others through the application of diligent effort -- and you didn't have to!   Everything worked out well for both of us.

> In the end, Larry needs to grow up and get over his relentless
>self-pity.

Please stop looking in that mirrow while you're talking about me, Dwight. Its confusing.

>If he isn't able to do that, then Ed is absolutely right -
>Larry needs to give up his license and move on to something else that
>does not "upset" him so much.

No upset here, Dwight. I'm fine. Wish the same were true of you!

Jon:

I guess you're more affected by such things because I was never personally aware of this "pecking order," nor was I ever negatively affected by it. Now, that's easy for me to say, because in my own case, I wasn't exposed to it very long, due to the relative simplicity of rising to the top of the so-called "pecing order." What I could never understand is why those people who WERE sensitive to the "pecking order" never bothered to apply themselves to overcoming it, or at least rise to the top so they could be the "peckers" rather than the "peckees," if they preferred. But, you know, this "pecking order" stuff is just exactly the kind of whining that was a big part of the dumbing down-process, and it doesn't surprise me to see that an ARRL staffer, in the prototypically smug, smart-assed, bad attitude manner that a lot of hams have learned to expect from ARRL HQ officials, is now writing about it. I suggest you put in Op-Ed piece in QST about how much better ham radio is now that the "pecking order" has been removed. Be sure to include the words of "Kumbya."

>If part of what you derived from ham radio was the
>I'm-better-than-them ego boost provided by your position in the license

Jon, until you brought it up, I never gave it much thought at all! However, that seems to be a concept right at the leading edge of your own conciousness. I wonder why?

>That
>frankly doesn't concern me since ego boosting isn't the purpose of ham
>radio.

And, apparently, neither is the concept of achievement through progressive learning and development of useful communications skills. What a shame.

You may not have given it much thought, but you've been practicing it by
pecking at those who you perceive to be lesser hams than yourself, based
solely on what license they hold, and by insisting that the removal of
the pecking order has turned ham radio ito something contemptible.

> >That
> >frankly doesn't concern me since ego boosting isn't the purpose of ham

That concept is still present. It just doesn't require government validation any more. We don't need government proclamation of who is and who is not a "real" ham. We can recognize and celebrate real achievement (as distinct from passing exams) within the amateur community -- and without denigrating those who choose not to pursue a particular subset of ham radio.

Jon

Jon,

I really do not know if it was available then, but the yearly membership of $5.00 for me was two weeks allowance and seemed very reasonable at the time. While you are correct about the base year selection, one needs to start somewhere. I have always thought that the CPI actually understated the real overall cost increases that most families notice over a long period.

It is easy to get pricing from any time period and there are some things that have come down in terms of the CPI. Some examples are electronics (huge drops) many grocery items, gasoline (but it is now catching up) and some major appliances. However, other costs affecting families have shot up much faster than the CPI. Costs of vehicles, housing, many kinds of insurance except for possibly life insurance, health care, college tuition, lately heating oil and natural gas, and as some have mentioned, personal services.

The problem with the CPI is that it probably not weighted correctly, but it is the index that many things are tied to such as social security and some contract wage increases. It is also the prime indicator of inflation and can be the generator of federal reserve interest hikes or cuts that have tremendous impact on the overall economy.

I tend to look at most pricing in terms of the CPI starting at some base period, usually when I began to purchase items of the same category that I purchase today.

Richard,

Good Point, Especially on the school taxes. There are reasons of course. In our local school system the addition of system personnel over the last 10 years has been tremendous while student population has declined about 18%. Computers cost money, as does new sports facilities.

Mother Superior;

US amateur radio is surviving just fine and attracting newcomers.
But...NOT through code testing for a license. Attrition is
happening, has been happening among the code-tested
licensees. See the statistics compiled from FCC public data
by a supporter of morse code, AH0A.

>What is equally contemptible
>is how the ARRL reversed its course on the support of code testing,
>the minute they saw a requisition for red ink from their accounting
>department.

tRoll, the ARRL quite rightly supports amateur radio regulations as being the law for US amateurs. How do you manage to make obeyance of law as contemptible? Are you an outlaw?

>What is contemptible is the sappy, saccharine
>political correctness of ARRL officials who never saw a knuckle-
>dragging HT user they didn't fall in love with -- all the while staring
>directly at their wallets.

Truly a Troll statement. No-code-test Technicians are very close to one-third of all US amateur radio licensees yet the ARRL membership demographics indicate that only about one-eighth are ARRL members. How is it "comtemptible" for the ARRL to encourage Technician class memberships?

Isn't it contemptible for the tRoll to label Technicians as "knuckle-dragging HT users?" See past references to them as "shack on a belt" amateurs.

> What is truly contemptible is the way
>amateur radio no longer stands for any kind of meaningful
>accomplishments.

Ah, so the tRoll does not see therefore these accomplishments do not exist.

Digital Signal Processing (DSP) has existed for two decades in electronics...as ready-built hardware, as kits, as computer programs controlling computer sound cards for audio processing. Has the tRoll done anything with that technology other than reading sales ads on them?

If the Holy tRoller would look into past issues of QST or QEX or even the Technical Information Service page of the ARRL he would see a number of technical accomplishments by radio amateurs...accomplishments that the Holy tRoll could duplicate if he wasn't so busy sneering at no-coders.

>Heck, learning isn't even required anymore,
>since the licensing requirements have been dumbed-down to
>insignificance.

Mother Superior role again. No one knew as much at the time of license testing as the Holy tRoll. Apparently all that was forgotten afterwards since the tRoll does not participate in any discussion involving technological arts.

Mother wishes everything to be static, set in the armor-plated concrete of past standards and practices, no advancement for the Mother cannot learn anything after being licensed long ago.

>Personally, I have complete contempt for what ham radio has turned
>into.

Then you should turn in your license, declare it null and void, quit, go QRT, forget about it. With one less of your kind around it would be more attractive to newcomers.

Apparently Mother Superior wishes to be honored and revered for claimed accomplishments above and beyond human ken. No doubt she feels truly superior, perhaps god-like in majesty, the law-giver who sits in judgement of "lesser beings." :-)

>...   The way I see it, you (the ARRL)
>could have stopped Restructuring and supported, defended, and
>successfully retained the status quo in amateur radio license testing.

The ARRL did, according to public record, support and defend a virtual status quo in US amateur radio in 1998 and 1999. They did not succeed in retaining the god-like powers of high-rate morse code testing patronizingly demanded by some.

>You went for change for change's sake, only because the slouchers
>demanded it.

The "slouchers" are now a third of all US amateur radio licensees.

Those "slouchers" were also US citizens, some being military veterans, who have accomplished other things in life besides trying to promote continuing standards and practices of the 1930s in US amateur radio.

> Now, you get to lie in the bed you made.

...Freudian slip based on an unsuccessful Saturday night? :-)

>If I read the statistics on the Speroni web site correctly, there has
>been a net gain of 4,063 licensed amateurs since Restructuring
>took place in April, '00.

tRoll reads wrong. The net gain is 3,701 with the gain coming from no-code-test Technicians. Code-tested US amateur licensees decreased by 9,431 in that 9-month period. In that same period 13,132 no-code-test Technicians were added.

It is truly contemptible for some claimed academic graduates to be unable to handle simple arithmetic on public data. :-)

You don't seriously believe that running a school system has anything to
do with educating students, do you? It is the excuse for the game to go
on; kind of like the relationship of peanut farming to agriculture.

Many moons ago C. Northcote Parkinson (Parkinson's Law and other Studies in Committeeology) extrapolated then-current trends in the British Navy and concluded that somewhere about now the RN would consist of one destroyer staffed entirely by Admirals supported by 100,000 Admiralty employees and a few hundred-k dockyard workers. Get the book if it is still available.

If you have a good, usually male, teacher, he has a family to support so a deal is made by which he gets hours or actually gets and Ed.D (thereby supporting another game) and becomes an administrator for twice his previous salary. Most administrators are in make-work basically to provide an advancement path when you cannot pay someone for being a good teacher.

American management theory rewards only titular leadership over others. This leads to things like the ZL hired by McDonnell as a chief who quit after a year so he could do some engineering and the police commission scrambling for a way to pay a crackerjack detective who can't pass the sergeant's exam. You wouldn't dare suggest PAYING a good teacher, would you? Or godhelpusall pay a math, Physics, or Chemistry teacher more than the PE coach; the union would have your head.

Far as sports facilities, isn't the function of the high school to entertain the taxpayers???

As a reply I repost here from rraa, a post which no doubt belonged here in the first place, but it was a response to a codehater who began to bash code over there, so was answered in kind. This post tells it like it is. It you folks in Newington see that as an artificial pecking order, then I might suggest you recruit like hell among the codefree, as they may well constitute the vast majority of your future membershsip. All I've seen from Newington so far indicates that nothing will be done that could in any way be seen as negative nor in conflict of the Grate Political Correctness that is a code free ARS, the balm of the masses, whatever their lack of interest in any facet of radio except grabbing a microphone.

Richard Harrison wrote: on rec.radio.amateur.antenna:
>
> Why learn Morse? Only to fill some arbitrary regulatory requirement.

No,Rich, only to 1.) Learn to use a basic communications mode, and 2.) To qualify for an HF amateur radio license so long as that qualification is on the books as an international requirement.

> You can learn and practice Morse for fun. It hurts nobody. But require
> it? Morse is already phased out of every pursuit except amusement.

Not so, there are still a number of ham radio CW traffic nets that meet almost daily to pass traffic, mostly for training and practice purposes. And it is still used on occasion to actually handle traffic.

During the last hurricane season where there were serious effects from storms experienced in coastal Georgia and Texas, in both those situations emergency nets handled traffic using Morse code when conditions deteriorated to the point that SSB was no longer usable. Of course other modes could have been used had they been in place and at the ready, but they were not, and CW handled the traffic with no difficulty, since there were hams present who were proficient in its use.

Comes the day than no hams are proficient in its use, that won't be possible. That is one reason some advocates of retaining a CW qualification continue to promote it.

> Even last resort claims are more fancy than fact.

In your experience, I'm sure that is correct. All others don't share your view, however, and I have personally experienced circumstances where I would have indeed been pleased to have had radiotelegraphy to fill in for commercial communications failures. But no CW gear was available since it had been replaced and phased out years earlier. I don't advocate that it not have been phased out, that was the only logical action. But in ham radio it is different. Our mission, at least those of us who consider ham radio as anything more than "Just a hobby" ----those of us who believe it to actually be a viable backup communications service to serve on those rare occasions when failure call it into play----   know, without doubt, that Morse on radio is a viable and potentially valuable resource, still. Even in the face of all that has come in the recent past.

Why? The answer is simple-
Radiotelegraphy remains as the most simple, basic, and most easily implemented means of radio communication yet devised. *IF* there are operators available who can use it.

> The idea that Morse enobles doesn`t prove that the same effort spent on
> something else wouldn`t be more enobling.

Not much in life "Enobles". Morse code does not, except in the minds of some of its opponents. But nothing else is the equivalent of knowing and being able to use Morse. Learning Morse code ENABLES.

> It would very likely be more
> useful to spend your time on something else.

Many people feel that way, and that is certainly their right. And it's nothing new.

> If you were to become accomplished in music you might entertain music
> lovers, but not on ham radio. You can talk on ham radio, but you would

> likely profit more from studying the art of conversation than learning
> how to say it in Morse.

Until you developed a bad case of laryngitis. Or were too far from your intended recipient to shout and had no other means to contact him except Morse. Unlikely, of course.

> The whole Morse argument is beyond odd.

Yes it is. The most odd part of it is that so many who should, and probably do, know better claim that Morse no longer has potential communications value - just because it has been around a long time and there are many other more modern modes and methods.

> The majority of the best conversationalists and scientifically astute
> have no interest in Morse code. If they liked Morse they might have
> become hams among whom Morse is still practiced. Why exclude them from
> any ham bands? They could improve the tone. They should be recruited.

It has always mystified me that so many individuals who can learn so much are put off by so little learning as Morse code represents. When I decided as a kid to become a ham, I don't think it would have stymied me if they had required me to learn Greek. For darn sure Morse code didn't.

> Why exclude the inept in science and conversation who don`t do code?
> They might benefit from the amateur experience, and bring something to
> the hobby that is missing.

Who excludes one who decides he doesn't want to learn something that is really simple but takes a modest amount of time and effort? The person himself! Why exclude him, indeed!

>
> Numbers count!

Any mathematician will confirm that statement.

> With a large market for ham gear, you might benefit from lower unit
> pricing. With a lot more hams, congress would pay more attention to what
> hams wanted. Bigger is better. Minimum requirements is the way to grow.

I've always been one who felt that it should be only as difficult as necessary to obtain a ham radio license, and never more difficult than necessary. As a practicing Volunteer Examiner for the first eight years of the new VE system I always put that exact philosophy into practice, and there are many licensed hams who were tested by my team who will

confirm that. I am not a "big" CW man, by any stretch of the
imagination. I do believe firmly, however, that all ham radio operators
should feel the responsibility to take it onto themselves to learn to
use the most basic and most simple mode of radio communication.
 Any ham who cannot operate effective CW is not an accomplished ham,
whatever his other accomplishments. CW is BASIC radio communication.

73, Dick Carroll W0EX

>radio for me may very well be to use these services on
>*former* amateur frequencies. Time will tell, but for now, my
>license stays on the wall of my "shack."

Actually, regarding 500MHz and up, I suspect you are

probably correct. The interesting point, however, is that
those frequencies above 500MHz have very limited
use to most hams except for short distance transmissions...which
is exactly why the cell phone/pager/PCS folks want them.
I truly wonder what percent of all hams have ever made even
a single contact on any frequency (ham frequency) above
500 MHz?

Cheers,
Bill K2UNK

Dick, as you ought to know, I have zero problem with Morse as an operating mode. I've spent far more time operating Morse than I have operating any other mode, and I expect that to continue. But it's not the be-all and end-all of ham radio, nor do I consider Morse skill to be the litmus test of amateur ability that you think it is. Still, I have no problem with people who believe that Morse testing has a value that makes it desirable to keep it as a requirement, even though I happen to disagree with that particular viewpoint. What I do have a problem with is people who look down on others simply because those others have not passed a code test. Equally, I have a problem with those who look down on others who *have* passed a code test. Both of those extreme viewpoints are occasionally expressed in this NG; both are equally wrong.

Jon

In other words, Dick, those of us who support reasonable
testing requirements to ensure that radio amateurs can effectively
employ one of the most useful communications modes in the ARS
are extremists; those who support the concept of touchy-feely,
politically correct "inclusiveness" are in the right, due to the fact
that they meet the needs of a much larger clientele. Jon's
gracious admission that he has a "problem" with people who look
down on others who have passed a code test notwithstanding, this
is just more of the usual pandering from 225 Main St.

Bill:

Probably around .05 percent, and that's being generous. I've personally never owned any amateur gear capable of generating a signal above a frequency of 1.2 GHz; and I've only made two successful QSO's in that band. The problem: Nobody to talk to -- even many years after the adoption of 100% codeless licensing for operating privileges in that spectrum. We (the amateur community in general) were given airtight assurances that removal of the 5 WPM code test from the Technician-class licensing requirements would inspire major growth in amateur radio and widely increased utilization of our spectrum in the UHF range -- largely dedicated to high-speed digital data communications. Yet, after all this time, I can not send a wireless message over strictly amateur-based circuits any further than my own county line -- and most of the time, I can't even get that far! Therefore, I can't help but wonder why giving away HF phone privileges is supposed to be such a major benefit to our service. I say, the sooner commercial interests start doing some productive and profitable work on that spectrum, the better. I wouldn't sell off our amateur spectrum above 500 MHz -- I'd give it away free to whomever proposed the best commercial use thereof, in order to stimulate that business and all of the economic benefits that would come with it.

>that pecking order claim.

Bill:

I'll admit that I have supported the concept of a progressive,
multi-tiered licensing system, for the purpose of encouraging
continued learning and communications skill development by
using increased operating privileges as the incentive. I have
not, to the best of my knowledge, supported this system
merely to keep an elitist "pecking order" in place.  That is
the fear of the no-coders, to be sure, but those of us who have
reached the top of the former licensing structure don't really
consider that achievement that unique, since people of all
ages and from all walks of life have done so.  The notion of
a "pecking order" is just another specious construct from
those who pander to the politically correct popular culture.
Purely nose-piercing and pony-tail stuff -- with no relationship
whatsoever to the reality of people who understand how to
achieve things on their own.

Seems "The St. Valentine's Day Massacre" is exactly one of those
"specious constructs".

Richard Harrison wrote:

> CW may be basic, but it is no prerequisite to any other mode.

Of course not, it is prerequisite unto itself- you can't use it if you
don't know how.

>

> CW has been defended as essential to emergency communications,

No, it has not- it has been shown to be the most basic of radio communications modes, still very effective even though it is quite ancient by comparison to the flashy efficient new modes that require much more hardware overhead and support.

> which is
> mistakenly claimed as a mandate of amateur radio.

You can ignore the history of the amateur radio service but your attitude cannot change it.

>
> Amateur radio is a hobby.

Sure it is. But unlike almost all other hobbies, it is something much more. No stamp or coin collector will ever find himself in the position to use his hobby to perform critical public services. Most hams will never see the time when they are called to do so, either. So in your opinion no ham need ever prepare nor expect such a thing to happen nowadays, what with cell phones and satellites. Your understanding of the frailties of modern communications belies the level of your education and experience. You simply should know better than that. For some strange reason a number of engineer-hams suffer from that very deficiency. Oddly, many are no-coders, also.

> Amateurs set up emergency and public service groups in which they can
> put their communications gear to good use. It`s all voluntary. Cell
> phone users can do the same. If the cell phones fail, there are
> satellite phone and internet connections. There are more do-gooders with
> cell phones than radio amateurs. They are welcomed volunteers with the
> Red Cross, etc..

This paragraph only shows your lack of expressed knowledge of reality of life in the world of communications. Only ham radio incorporates such a diversified widespread cadre of operator/stations as to be capable of detaching itself from the gridded infrastructure to the extent that it can function on its own without dependence on such things as power grids, networking schemes, or both. When the lights go out for long periods, or some natural calamity comes, the telephone network clogs- did you ever get the "all circuits are busy" notice? Don't even mention the cellphone network. It was never designed to handle large percentages of its subscribers and saturates straight away. Satellite phones? You mean IRIDIUM? Globalstar? Yeah, right! Not much help there. ALL public safety comms are in instant overload when the ship hits the sand, been there and done that. That leaves FRS and CB. Real organization and true communications capability there, for sure. NOT!

So you go right on blithely assuming that all is well, and your world is secure. If you lived in California you would have assumed, until a couple weeks ago, that your lights were certain to stay on at will, too, and there would always be a working traffic signal at each intersection on the glutted streets and highways.

Modern communications systems are far more fragile and vulnerable than you evidently can imagine. Ever hear of the "Digital Pearl Harbor"? Everything out there is ran by computer these days. That makes everything vulnerable to the hackers. Microsoft itself is not secure. What next? It won't necesarily be a natural disaster that takes modern comms down.

A few years ago in a fairly large town not far away a fire in the central telephone office put the city off all telephone service for days. Meanwhile, the local ham radio 2meter repeater filled in nicely for local critical communcations. Later the telephone company awarded the ham radio club repeater space on its mountaintop site in appreciation of their help. Not a big deal, and rare, but just one more example. So many of you code bashers are so eager to do away with all but the "hobby" aspect of ham radio. Why?

> Amateur emergency help may be welcome, but it is seldom essential.

And when it is essential it is far more than welcome. It is - well, essential.

> Newsflash: Amateurs don`t have to earn spectrum for their radio hobby
> through good deeds. They have access rights simply by getting an FCC
> license.

Ah, now we get down to it. "I have a right". Sure you do. One which can be withdrawn at the stroke of a pen "In the public interest, convenience and necessity".

Comes the time when amateur radio is seen by officialdom as nothing but a burdensome klaven of simple hobbyists and troublesome misfits, a significant portion of whom really don't care, and that pen stroke becomes reality. It has been made perfectly clear that the slide in the direction of worthlessness as a service has been in progress within the Amateur Radio Service for decades.
The instant brouhaha merely serves to grease the skids.

> Just as commerce and industry are worthy and have rights, so do
> individuals, for their life, liberty, and pursuit of happiness.

Which does NOT include transmitting access to any part of the radio spectrum for recreational purposes. There is a "basis and purpose" for the amateur radio service in the FCC rules. You really should read it sometime.

> Dick Carroll is dwelling upon long gone times and conditions before
> there were modern communications.

Very creative writing, Rich, but far too unrealistic to gain
credibility as fact.

Only in the beginning. If you stick with it, Code Quick will soon fade
away as the brain starts to automatically decode with no conscious
thinking involved...

>I think Code Quick is the most confusing, inhibiting,
>and inefficient Morse code learning programs ever devised.

It's only bad if it doesn't work for you.
 Apparently it works for many...

This is the *real reason* you don't like Code Quick. People who have
no intention of ever using the code on the air have found success in
using Code Quick to quickly pass the code test. But then I suppose
that's similar to people who have no intention of learning electronics
using memorization to quickly pass the written test...

I'm not talking about a radio, Dick, I'm talking about any signal. I said it
was a hypothetical exercise. But if the added modulation were done before
the signal reached the receiver, it would be even more impossible to detect.

No, the extremists are those of you who denigrate those who haven't taken the same tests as you. In short, it has nothing to do with code testing and everything to do with how you treat people. If you think how you treat others is a issue of "political correctness," well, that pretty much proves my point.

Jon

I doubt there's a PhD in my entire home county, Larry, so you should be on the lookout for him on the air. Sooner or later, some Extra-Lite is going to cause you to send QRS.

You're worse off than I suspected, Larry. Do you really believe that
you have to go back to school to make any progress? I made virtually
all of my progress after I got out of school.

Obviously false, Larry. The reduction/elimination of Morse code testing

is the reduction/elimination of its federally sponsored welfare support program. When a person receives welfare, he/she receives something tangible that he/she can hold in his/her hand. There's absolutely nothing tangible being given away. To think otherwise is to think like a Liberal.

By all evidence of your statements in here you DO wish to
keep the pecking order alive and well because you've

managed to get to the "top" of the old pecking order.

>That is
>the fear of the no-coders, to be sure, but those of us who have
>reached the top of the former licensing structure don't really
>consider that achievement that unique, since people of all
>ages and from all walks of life have done so.

Oh, dear, more hypocrisy. That SOME others have jumped through hoops conceived and lobbied for by elitists, those at the top of the pecking order (tRoll included) can now claim superiority and insist that everyone else do as they did.

>The notion of
>a "pecking order" is just another specious construct from
>those who pander to the politically correct popular culture.

Bullshit, tRoll. The pecking order arrived, was joined by those who believed in the popular culture of the "incentive plan" multi-tiered US amateur license class structure... along with the Vanity Call system codified in law so that younger, less-knowledgeable-about-theory, but capable of fast morse code rates could pretend to be old-timers with 1x2 and 2x1 call signs.

>Purely nose-piercing and pony-tail stuff -- with no relationship
>whatsoever to the reality of people who understand how to
>achieve things on their own.

So...no doubt everyone will be treated to yet-another go-around on how the tRoll set about disciplining himself and worked Real Hard to rise to the top of the amateur pecking order? That everyone else can do the same as he but everyone who does not share his views, aspirations are somehow "inferior?" :-)

The question is not whether or not tRoll, by himself, accomplished anything. The question is whyinhell are there certain standards and requirements in US amateur radio regulations. tRoll has danced around that without answering, his only rationale ending with a statement of his Hard Work and Dedication.

Hard Work and Dedication to old standards and practices should be respected. However, that respect does not carry through to enforcing the SAME thing to all newcomers by codifying it in law. If that were the case, amateur radio would have ended with the outlawing of spark emissions...the major transmitters of amateur radio in the beginning. Old-timers of that era would have insisted that all newcomers DO AS THEY DID. :-)

>communications.

Just exactly who gave those "airtight assurances?" The 1990 Report and Order that created the Technician class simply created the Technician class license. The FCC did not give any "airtight assurances" other than the creation of that class.

However, tRoll is quite WRONG on "major growth." Major growth was enough to make the single no-code-test Tech class within a percentage point of ONE-THIRD of all licensees as of the end of the year 2000.

As to the utilization of VHF and higher, where were the ALREADY LICENSED US radio amateurs? They were, and still are, able to operate on all allocated bands on up to the 300 GHz allocation limit.

tRoll bitches and complains about "underutilization" when he was part of the problem of underutilizing spectrum.

> Yet, after all this time, I can not send a wireless
>message over strictly amateur-based circuits any further than my
>own county line -- and most of the time, I can't even get that far!

Here's a thought: Try asking for help on what you are doing wrong. It would seem you aren't doing it right.

>Therefore, I can't help but wonder why giving away HF phone
>privileges is supposed to be such a major benefit to our service.

The FCC doesn't regulate or license radio amateurs to some sort of "major benefit to your service." The FCC regulates US amateur radio as one of MANY different US civil radio services.

tRoll wants a federal subsidy or federal recognition for "time in grade" as a code-tested ham superbeing?

>I say, the sooner commercial interests start doing some productive
>and profitable work on that spectrum, the better. I wouldn't sell
>off our amateur spectrum above 500 MHz -- I'd give it away free to

> being met.

Well...Let me be the first to say it here. Nah...Vince and others may
have said it first.
>
> >> I don't find myself feeling limited by the number of
> >> license classes in the ARS.

Maybe that is because YOU are not meeting the Basis and Purpose of Ham
Radio yourself.

> >> Necessity is the mother of invention,

Yes and it is necessary to have a basis and purpose to this hobby and
it is necessary for many hams to meet that basis and purpose or the
hobby will not only lose government support...It will be unable to
attract new members.

> >>not
> >> wallpaper. Interest and curiosity must provide motivation. Without
> >that I
> >> think you'd have to convince the US Treasury to issue their
> >certificates
> >> rather than the kind the FCC offers.

Some attitude...Many affluent folks think that money is the only thing
that talks. Ham Radio once was a hobby which attracted frugal people
who built their own radios and got technically educated at low cost.
Today the technical knowledge required to be a ham has little
commercial value and it is a fact that most Hams buy rice boxes.
> >>
> >> 73, Jim AC6XG

> once again :-)

There is no cycle the subject is a linear opinion that must be considered and most of the posts here which brag or complain about the hobby eventually get down to this kind of logic.
>
> >Such a license could command
> >real respect, not for just individual hams, but for Ham Radio as the
> >technical educational hobby that it once was and should be.
>
> You want that type of license=respect, then get a college
> degree or a tech school certificate.

I have a BSEE...but when I did not have a BSEE my ham license meant more to some employers than a BSEE because I had been able to show that as a Ham I had been able to build my own equipment from scratch. Most tech school and college grads did not have the practical experience that most Hams had in those days. Today things are a lot different because most Hams are not keeping up with the latest technology or building anything themselves. How can Hams, as Hams, meet the parts of Part 97 Basis and Purpose goals (which say that hams should be prepared to asdvance the state of the art) without changing their basic primary motivation to be hams??? My answer is by drastically changing their attitudes. When they do they might just be suprised to find that Ham Radio can again attract lots of new techies as well as the computer clubs seem to now be able to do. Bill Gates didn't have to finish getting his college degree...Neither did Edison, Farnsworth, Sarnoff, etc. For most older Hams it may be too late to expect them to now keep up with modern technology {they are veterans of the technologies of the past)...BUT let it not be too late to attract new hams into our ranks by offering more modern challenging exams that can not only give more pride but can prove more value. Ham Radio must have the same vaue to the individual and the USA as it had in 1940 and 1950. This is not an impossible goal...but it is hampered by old Hams who are only interested in what Ham Radio means to them. Many existing hams fear that any additional technical exam requirements might take away their frequency privileges or their ability to call themselves "Extra Class". The subject is PRIDE.

> <Snip of same old/same old>

Yep...Snip it if you want to but its meaning won't go away.
>
> Cheers,
> Bill K2UNK
>

73...
Cheers for the Hams who are not afraid to take MORE ham exams.

Bob Wex w2ilp (Insure License Potential)

In history it is always those with little
learning who overthrow those with much

learning...When young people grasp a truth
they are invincible and old people can not
compete with them.
 --Mao Tse-tung (1958)--

Mao was getting old when he said the above.
 --w2ilp--

The young techies of today are motivated
to repair their computer hardware and
hack their computer software...but the old
or the young hams are no longer being motivated
to repair their radios or even to try. Why would
a young techie of today want to be a ham?

I don't think we need Morse Code conscription at this time either.
Stating such, however, does appear to make me "anti-Morse Code" by some.

Remember Larry, Morse is PEEU and doesn't need government price
```

supports. Its so PEEU that people stand in line to learn it.

Which STILL makes the CODE TESTED licenses 66 2/3 of the total, a majority (not that it matters) by ANYONE'S definition.

And in as much as the Technician Class is now only one of three licenses available, what's so significant that it's "one-third of all US licensees", other than you trolling for another "no cw test" arguement?

Not that we'd expect anything less.

> etc.

You're right, Larry, newly licensed hams have probably not contributed a thing - only more advanced license holders such as yourself could contribute anything to ham radio. By the way, exactly how many contributions have you made to ham radio over the great many years you've been involved (be sure to include any relevant documentation -- news articles, media releases, etc)? Now, we're not talking about routine stuff like emergency communications, and so forth (plenty of newly licensed hams do that). We're talking about those special contributions that you've made, that, as you suggest above, newly licensed hams don't make.

> Hmmmmm again. Just where did I state that
> "newly licensed operators" were not "decent
> people?" Please provide quotes from Deja.com.

Trying to change the subject, Larry? I've never accused you of saying that newly licensed operators were not decent people. What I said is that you've carried on an endless campaign to belittle newly licensed operators with the use of derogotary names and insulting characterizations. And I don't need Daja.com to verify that - anyone who has been involved with this newsgroup for even a month or two has saw it themselves many times.

> I could care less how you obtained your
> license, Dwight.

Sure you do, Larry. You've posted many, many, messages over the last few years complaining about ham operators who got their license without a code requirement.

> The way you obtained your license does not
> make me upset and I wouldn't dream of asking
> you to give it up. [snip]

I'm sure you wouldn't ask me. It would be a disaster for you if everyone who got their license without knowing code gave up that license - it would leave you with absolutely nothing to complain about (something you obviously need to do on a regular basis).

> Again, I am not "upset." The code requirements
> were there for me to achieve, and the fact that

> worked out well for both of us.

And that is the major difference between you and me. Because of my involvement with marine communications (my "diligent effort" goes there), I got involved with ham radio to learn more about radio (not just to get a license to impress people with - which, based on how often you make an issue out of the class of license you hold, seems to be your goal). After that, ham radio is just a hobby that allows me to experiment, practice radio techniques, and enjoy conversations with friends.

> No upset here, Dwight. I'm fine.

I'm glad for you, Larry.

> Wish the same were true of you!

Thanks for your concern.

I haven't posted to the groups that Hans suggested yet, however I did take a look at the link AC6V sent. I guess calling what I heard a "long delay echo" was really innacurate. I was hearing the return ping at the receiver reset from transmit, so it was a very short enroute time from where ever the echo was occuring. Less than 90K miles?

Considering the extremely modest antennas I run for HF, I would exclude any side-lobe presentation. Perhaps a true circumfrential return?

73 and thanks to all.

Sounds like you have a severe personality problem regarding self motivation. When you satisfied the requirements for a college degree, did you also stop your progress? Do you only accomplish what you are forced to accomplish?

Larry is a little more than just "upset." For many months, Larry has carried on an endless campaign to belittle newly licensed operators with the use of derogotary names and insulting characterizations, while endlessly denigrating their efforts and contributions.

Those newly licensed operators include my wife, myself, and the many thousands of other decent people whose only ham radio "sin" is that we didn't obtain our license in the same manner as Larry.

Now, I'm sorry if Larry does not like how I obtained my license, but he is a damn fool if he thinks I'm going to give it up just because it makes him "upset." And he is equally a fool if he thinks we're going to feel sorry for him because he is "upset" about the reduced code requirements.

In the end, Larry needs to grow up and get over his relentless self-pity. If he isn't able to do that, then Ed is absolutely right - Larry needs to give up his license and move on to something else that does not "upset" him so much.

To my knowledge, Ed has never presented himself as a representative of ARRL in these newsgroups (ARRL doesn't have any representatives in this newsgroup that I'm aware of). In fact, if you had not mentioned it, I'm sure most people would have never even known about his involvement with ARRL.

But, whatever the case, I have never considered any comment made by anyone in this newsgroup to be representative of the views, opinions, or official policy, of that person's employer (or group affiliations) unless it is obviously so.

To do otherwise would have a chilling effect on free speech in these newsgroups.

True...but as engineers, scientists or medical people the MECHANISM...chemical, biological, electral, mechanical or whatever must be understood if there is to be any corrective measures devised. No logical standards can be concluded without an understanding of the real cause.
A hot chicken does not tell you the mechanism by which it got hot...but if you heated it in your microwave oven..You know the mechanism was microwave RF not heat conducted from a gas burner or radiated by your fireplace.

> Which makes sense. For the purpose of determining safe levels,
> the mechanisms are unimportant

Huhh? That is like saying Ohm's Law is unimportant as long as lamp
bulbs light. Only the observation of the light matters for determining
what voltage will quickly burn open the filament.

-- only the effects matter. (Again,
> that's not to say the mechanisms aren't of interest in their own
right.)
> I think they do extrapolate animal tests to the human body since I
doubt
> anyone has yet volunteered to be slowly cooked by RF for scientific

NOW YOU ARE NOT READING MY POSTS. Everyone who uses a cell-phone is
being volunteered [unknown to themselves] as a test subject. The
people who developed cancerous eye conditions were frequent cell-phone
users and were counted in statistical studies, which can scientifically
prove the high probability that the MECHANISM for causing the cancers
was cell-phone RF.

It is also interesting to note that for many years tobacco was not seen
as a health hazard...but once the mechanism [cigarette tars] was
studied lots of different diseases were found to be caused or
accelerated by excessive smoking.

Yet there are smokers who live to be 100 years old, who seem to be able
to physically resist the hazardous mechanism(s). Is cigarette smoking
safe? NO. Not for average people.

I just said that the recent research supports my beliefs as an engineer.
I am not a medical expert or even a Ham leader and I don't profess to

be either.

> is playing the bigger role in forming your opinion.

Yep but I have been given no grants and no cash incentives to prove the safety of either cell-phones or Ham HTs. What predjudice?   I am not in power to make any
decisions...only observations of scientifically proven facts made by others who can gather the statistical evidence and/or can perform lab experimentation. Some experimentation is being done on living cells in test tubes rather than human bodies. It can help to prove the MECHANISM. I say that UHF and microwave frequencies are a greater hazard than VHF. Why?
Because the possibility of heating human tissue or interfering with its normal biological functions is there...That is the MECHANISM! True, I have not quantified...but researchers are in the process of doing so. RF from an antenna in the near field is usually hard to evaluate. At UHF and above there can be concentrated beams of in-phase energy developed. Thus even at low RF power output, there can be dense narrow beams of RF developed. This effect is less at VHF than UHF and above. I don't claim to know all the details of cause and effect...but I also knew not to walk on thin ice before I learned basic thermodynamics.

The human body has developed various ways to protect itself from strong sunlight radiation...because there has always been a Sun; longer than there has been humans. We can not see RF or biologically protect ourselves from its hazardous radiation without technical intervention, as well as we have evolved to protect ourselves from strong sunlight. Strong spectral density RF has not been around long enough for the human body to adopt itself to its dangers. We can not afford to let people suffer and die from RF radiation until the survivors can develop protective immunity to it.

Please keep thinking,

Yes, although if the receiver AGC loop is separate from the DSP, that's
probably overkill, and if the DSP is within the AGC loop it's probably

not enough.

[Re: unsersampling]

> Might be a picky detail here, but the sampler aperture time

I don't think it's a picky detail at all. It's a pretty fundamental point and is what's hard about making high-speed sampling A/Ds.

> There's still an aliasing problem if the sampling is too close
> to an integral number of either the RF or the modulation

> deep into undersampling hardware-software.

The concern is with a harmonic of the sampling rate falling within the band of signals being sampled. That was the main practical consideration I was referring to when I said you would probably want to use a sampling rate somewhat greater than Nyquist demands. You don't want a multiple of the sampling rate to appear within the band you're trying to sample because it makes things more complicated; you have to convert the signal to an analytic signal and then (mathematically) frequency shift it. It's just a whole lot easier if you choose a sampling rate for which no multiple appears in the band of interest.

Nope. As long as the sidebands produced by your phase modulation fall
within the IF passband, they'll be present in the sampled signal.

Dave,

It is pretty high. I joind the ARRL in 1964 for $5.00 a year. Using the
CPI index from 1964 through 2000 that $5.00 is now worth about $27.50.
The ARRL is over 40% higher with the news dues rate. As some have
mentioned, services that were once without additional cost to members
now carry fees. I probably should have gotten life membership back
then.

But we can't apply corrective measures to the design of the human body.
The only factor we can control is how much RF we expose ourselves to.
For that purpose, it is the effect of the exposure that is important,
not the underlying mechanism.

> A hot chicken does not tell you the mechanism by which it got hot...but
> if you heated it in your microwave oven..You know the mechanism was
> microwave RF not heat conducted from a gas burner or radiated by your
> fireplace.

But if the point is to cook a chicken I don't need to know the mechanism
by which the cooking takes place, I only need to know that it gets
cooked when I apply either heat or RF at sufficient levels.

It's nothing like that at all. We need to know Ohm's law so we can design electrical devices. We're not designing human bodies. (Although there are those doctors who've announced plans to clone humans, so maybe we will be designing humans soon!)

If you choose a different base year, you get a different result. Neither the CPI nor ARRL dues increase in a smooth, continuous curve. Plus, of course, the CPI measures the costs of a lot of things that aren't relevant to ARRL's costs of providing services and doesn't measure the costs of a lot of things that are relevant, like the cost of magazine paper and mailing costs.

I don't think it was available in '64, was it? Seems to me it was a few
years after that when it became available.

I would suggest you look up the price of haircuts or any other personal
service. The CPI is of less than phenomenal value for any analysis but
any index will show that wherever the good or service in question uses

people rather than capital it will rise faster than the index as a whole.

Look at your school taxes where the only two technological innovations in a thousand years have been central heating so we don't wear robes anymore and a fellow named Gutenburg making it unnecessary to chain the prof's notes to the lectern. Now there is a personal service business!

Of course, but that doesn't resemble my statement. I have hypothetically added unknown modulation components to an IF frequency signal *after* it has been passbanded as a test for your undersampling techniques. How well can you do?

GOAT FELLATOR "DX405" <lightnin9@hotmail.com> whined in message
news:95fguo$t23$1@dagobah.blueriver.net...
> Right there shows the true <BITCHSLAP!>

It's not easy for you to talk about your mother's whoring days, is it?

> It just shows how much of a piece of garbage that you really are.

Poor baby. FOAD, remora attached to the underside of Lllllllloyd Davies.

> As far as being grossly obese, I am six foot four and 230. Not to
mention very well built and >quite agile.

Suuuuuuure you are.....maybe 5 foot 6 and 330.
BWHAHAHAHAHAHAHAHAHAHAHA!!!
You're the tallest in your inbred family, aren't you? Rumor has it
you're almost incomprehensible in person (owing to your heavily
accented and alchohol-slurred speech) and this combined with your being
dirt poor and ugly makes you very uncomfortable with human interaction
of any kind.
You have therefore moved yourself far from the mainstream of human
society, thereby earning its eternal gratitude.

> I do a lot of stuff like

Stuff your face with moon pies and ding dongs. Yeah, we know.

> basketball and other sports.

Suuuuuure you do, water boy. You may fetch the towels for the people
who DO participate.

> Something that a lazy assed 45 year old doesn't do.

Assuming, again, COWARD.

> Oh, thats right you just talk about having sex with
> other peoples moms.

Poor baby....your mom sucked and swallowed every drop.

> You are a real brilliant one

I know! Too bad you didn't get through high school....DROPOUT.

>and not to mention a 45 year old

Did you take your shoes off to enable you to count that high?

> loser.

PKB. You are about as entertaining as a child's inflatable punching toy. You bop it, it springs back, you bop it again and you forget it ever existed. It slowly deflates in an unused corner, then one day you throw it away.

> Nice job on showing your true colors. .

While your posts only demonstrate your world-class cluelessness.

If the sidebands fall within the passband it doesn't matter whether they were created before or after bandpass filtering. If they fall outside the passband, you've created a new passband and an appropriate sampling rate for that passband must then be chosen in accordance with the Nyquist criterion of twice the bandwidth.

I do believe that is exactly what I said, Jon, and you argued with me. So
I repeat: If one doesn't know the passband and wants to guarantee that all
possible modulation components are decoded, one cannot use undersampling.

No, this is the first time you specified an unrestricted passband.
Strange receiver you've got there!

Why don't you just admit you didn't understand the theory initially?

Jon

Your explanation of why there needs to be more ham licenses reminds me of
Nigel Tufnel explaning why his amp goes to eleven. I'm afraid that if you
want to command respect from anybody, you'll have to do more than wave a
license at them anyway. Besides, I don't think the FCC intends commanding
respect as being the basis and purpose of the ARS or of licensing. It's a
lovely dream nevertheless.

They said that it doesn't prove anything about character. They never said
it doesn't prove "anything". Obviously it proves code proficiency. They
have more of a neutral bias on the issue than you do, I think..

Right. And this incremental increase in speed had nothing to do with FCC rules. It occurs inevitably to almost everyone who uses CW.   Personally, I don't care how fast someone can copy code if they never get on the air and communicate with it.

The point is that 5 WPM is indeed sufficient for someone to get on the air, use the code, and increase their proficiency - contrary to your claim. If they're not going to get on the air in the CW mode, then they don't need the increased proficiency and no one, not the ARS or the FCC, benefits from their increased proficiency. In my opinion, only the ham himself benefits from it, and again, only if he uses it.

I think some form of code requirement is still worth keeping - even if it's in the form of multiple choice dits and dahs on the written exam.

> This is why I believe that in the absence of a "real" code testing

Spectrum allocations are a whole different ball of wax. Personally, I don't see the use of phone in the Novice CW portions of the band as much of a threat to CW. I can sure as heck filter out phone with my CW filter a lot better than I can filter out CW with my phone filter.

73, Jim AC6XG

I said I could add modulation components to an undersampled *signal*
that you couldn't detect. You said I couldn't. You were wrong. Absolutely
nothing was said about a restricted passband. Strange receiver you've got
there. (I'm talking about your brain.)

> Why don't you just admit you didn't understand the theory initially?

What a laugh. Intel sure wasted their money sending me to DSP classes
for six years, huh? Why don't you just admit that you like to pick
arguments, even with people who agree with you?

Hi.  I came across this thread in a microwave search.

I have a PDF copy of a comment I submitted to NTIA recently:  It
attempts to clarify the mechanisms involved, which seem to have
been misunderstood by many past researchers.

It is somewhat technical, but the main point should not be
difficult.

Email me at jwill@AstraGate.net for a copy.

Agreed. But they have, as you note, been remarkably
silent as to what, if anything other than proficiency of code
is proven by the requirement. Smetimes the silence can
be deafening.

>They
>have more of a neutral bias on the issue than you do, I think..

Do you have even the slightest belief that the FCC has
any inclination to retain code once but for the current
international requirement (S25.5)?

Cheers,
Bill K2UNK

That could be, but it sure does nothing to indicate to anyone that any
other ham needs to have that level of training in DSP or they should be
considered as "ignborant". Rather, anyone who would make such a
statement is himself ignorant.

I just looked up "pride" in the Bible concordance. Wow, God sure
doesn't like pride. He prefers humility.

Here's the interchange. Note that I didn't say anything about any passband.
It is clear that I am talking about taking the IF signal after the filter
and modifying it so that your undersampling technique won't work. What is
it about "at the IF frequency" that you don't understand?

> Cecil said:
> > I can phase modulate at the IF frequency and

Jon replied:
> Nope.

So are you going to continue to assert that your undersampling technique
will work no matter how much extra modulation is added to a signal or are
you willing to change that "Nope" above to "Yes, but ..."?

I'm telling you, Dick, if you don't learn DSP techniques, you are going
to be a technically obsolete/ignorant ham in the not too distant future.
All filtering and detection functions will soon be done with DSP.

...this is getting to be just finger-pointing and shouting.

Cecil, demonstrate however you can with SPECIFICs, please, how you can add modulation components to an undersampled signal that cannot be detected. No word play, please, electrons and waves don't respond to human word play.

Let's refer to a sampling oscilloscope. Does a sampling scope accurately portray a waveform having a much shorter period than its sampling period? As far as I've seen in theory and in practice it does.

The output of a sampler frequency-shifts a waveform down in frequency. The waveform in the time-domain contains all the components of the frequency domain, amplitudes, phases, the whole thing. Demodulation of a frequency-shifted modulated RF signal is done by the same method as demodulation at the original frequency.

If you are "adding something (unspecified)" to an undersampled signal that "cannot be detected," then you have to start naming these unspecified conditions to prove your point. Without those particulars your message point cannot be detected.

Firecracker Material (courtesy of AH0A statistics on US ham licenses)-

In the 9 months following US amateur radio restructuring, the total number of US amateur radio licenses increased by 3,701 (+0.55% of total). Code-tested licensees declined by 9,531 while non-code-tested licensees increased by 13,132.

In the 3 years from January 1998 to December 2000, the total number of US amateur radio licenses increased by 5,734 (+0.85% of total). Code-tested licensees declined by 33,267 while non-code-tested licensees increased by 39,001.

It should be fairly obvious that the non-code-tested are continuing to increase in number just enough to offset the decline in code-tested licensees plus a slight positive growth in total ARS licensees...but not a significant growth. The code-tested licensees have continued to decline despite various rationales on that seeming "inaccuracy"...an "inaccuracy" claim that will probably continue until the last code-tested licensee is SK.

As of the end of December 1997, code-tested licensees were 73.4% of the total, non-code-tested licensees were 26.6% of the total.

By the end of December 2000, code-tested licensees were 67.9% of the total, non-code-tested licensees were 32.1% of the total.

The balance scales keep tilting in favor of the non-code-tested license classes.

```
As far a NEW amateur radio licensees is concerned, it
very obvious that newcomers are favoring the no-code-
test Technician class despite the lack of operating
privileges below 30 MHz.  In three one-year periods (Jan
to Dec) from 1998 to 2000, the numbers are -
2000:
   Total new licensees:   18,658
   Code-tested new:         1,768
   Non-code-tested new: 16,800

1999:
   Total new licensees:   16,311
   Code-tested new:         2,355
   Non-code-tested new: 13,946

1998:
   Total new licensees:   17,521
   Code-tested new:         2,745
   Non-code-tested new: 14,776

While some claim that Technician Expirations are just starting
and are supposed to show "signigicant decreases" in that
class, such speculations ignore the continuation of new Tech
licensees that show no indication of slowing down the Tech
growth rate.  That supposed "entry level" class is very nearly
one-third of all US licensees.

>
>They said that it doesn't prove anything about character. They never said
>it doesn't prove "anything". Obviously it proves code proficiency. They
>have more of a neutral bias on the issue than you do, I think..

As far as what I've been able to read in 1990 and in 1999, the FCC said that the amateur radio code test does not prove anything for their purposes of granting a US amateur radio license. [please to include the whole sentence I wrote in quoting]

Can you say the only US civil radio regulatory agency has a "bias" on what they grant? Said "bias" is a very subjective thing for every observer. The FCC simply regulates US civil radio and issues licenses where regulations call for them.

Yes, the code test proves some elementary code cognition ability. Is that the whole point of US amateur radio below 30 MHz? To prove some code capability?

Is obtaining a code-tested US amateur radio license all about "proving one's worth to the 'amateur community?'" I don't think so looking at it from the FCC's point of view. The US amateur radio community doesn't issue licenses nor does it "grade" any licensee...officially.

As of December 1997, the number of code-tested US amateurs was 73.39% of the total licensees while the number of US amateurs not code tested was 26.61% of the total.

As of December 2000, the number of code-tested US amateurs was 67.9% of the total, the number of non-code-tested US amateurs was 32.1%. In actual numbers of amateur licensees, the number of code-tested amateurs is dropping while the number of non-code-tested amateurs is rising. It's been that way for several years. The FCC can see that rather well.

Is the FCC "neutral" on amateur code testing? I don't think so. If they were "neutral" they wouldn't have made the statements they did in 1990 and 1999 R&Os about code tests...probably wouldn't have even bothered to create the Technician class.

Falling into the desperate habit of resorting to selective quotes to
twist meaning, again, eh? Let's review the *complete* quote:

Jon replied:
> Nope. As long as the sidebands produced by your phase modulation fall
> within the IF passband, they'll be present in the sampled signal.

Clearly, it was only after you read that that you tumbled to the way it actually works. Now, of course, you are trying to reinterpret your earlier statements to mean something other than what you said. Your usual scramble when you've been shown to be wrong.

> So are you going to continue to assert that your undersampling technique
> will work no matter how much extra modulation is added to a signal or are
> you willing to change that "Nope" above to "Yes, but ..."?

Since I never asserted that, as the *complete* quote above shows, it would be impossible to "continue." (See: "Have you stopped beating your wife?") You just can't stand to admit you were wrong about something. But I think I've derived enough amusement from watching you squirm. Feel free to have the last word.

Jon

NO!!! Maybe *most* newly manufactured SSB and some other gear
will incorporate DSP functions. Not homebrew nor kitted gear which is
becoming so popular with so many hams these days. Your statement is
simply untrue. Stop trying to remake the ARS to your own personal
specifications.

Please don't try to divert the subject from what you said that was wrong to what you said that was right. We are not discussing the truisms that you uttered. We are discussing your assertion that I cannot add modulation components to a signal that your undersampling techniques cannot detect.
I said I could. You said "Nope", I can't. That "Nope" is all that matters.

You seem to be continuing to assert that I cannot add modulation components to a signal that your undersampling techniques cannot detect and you are coming across as a person who considers himself so perfect that he never makes a mistake. You obviously made a mistake, Jon, which can be diagnosed by answering the following questions, true or false.

1. Cecil cannot add modulation components to a signal that cannot be detected by my, Jon's undersampling techniques. (true or false)
If you answer true, you are mistaken. If you answer false, you contradict your previous "Nope" assertion.

2. I, Jon made a mistake in my inference about what Cecil had said.
(true or false)

One of the above above two things happened, Jon, and either way, you made a mistake. Sorry, you are going to have to give up your "Mr. Perfect" posture.

> Since I never asserted that, as the *complete* quote above shows, it
> would be impossible to "continue."

It doesn't matter what you said after "Nope", Jon. The "Nope" was the part that was wrong. If I say "A=A" and you say "Nope, B=B" you are still wrong. And you are still wrong. To correct your mistake you must change "Nope" to "Yes but ..." because you know and I know that I can add modulation components to a signal that your undersampling techniques cannot detect.

How you can deny saying something that is still there in the thread for
all to see is unbelievable.

Now you've got me curious: How do you plan on going into Jon's radio
after the IF sampling has taken place to "slip an undetected message
right past your undersampling techniqjue"? Anything that appears at the
point the undersampling takes place will be sampled at an equal rate.
Are you into magic these days? Or just excessive grape juice?

Jim:

I don't think Fred was referring to chronological age; he was referring to hams who have been licensed for longer periods of time. Just what period of time he considers an "older" ham to be is anyone's guess, but I'll attempt to quantify it by stating that anyone licensed prior to the implementation of VE-testing, as I was, is an "older" ham. The VE-testing was the beginning of the end, dumbing-down wise, IMHO. Ironically, I originally supported the concept of VE testing, and upgraded rapidly with the notion of a lengthy career serving the hobby as a VE. Then the corruption reared its ugly head, and I washed my hands of the VE mess while I was still relatively uninvolved. I digress. An "older" ham is one who was licensed as a General or above prior to 1985. Since I was originally licensed in '81 and attained Extra class in '83, I meet my own definition as an "older" ham, regardless of my age.

Your mileage may vary.

Ed:

I'll keep my amateur radio license as long as it serves me in any manner I find useful. I do admit that my enjoyment of ham radio is greatly diminished along with the reduction in licensing standards. I seem to have worked everyone there is to work on CW, and even on the FISTS frequencies, there is nothing there but mindless awards-chasing and 84-year-old retirees in Florida trailer parks, running their letters and words together but doing it very fast, indeed. I doubt that even if large numbers of new hams come on the air in the Post-Restructuring era, as they have yet to do, that my interest will be rekindled very easily. I had high hopes and aspirations as a ham; but I now find myself strangely apathetic. I really would like to get the old ham spirit back, but that hasn't happened. I was having fun on PSK31 for a while, but once I worked seemingly everyone using that mode, and they were also 84-year-old retirees in Florida, there was no more point in it.

I'm not quite ready to give up on ham radio yet, Ed, but the ARRL, now that it's talking about trying to save a bit of CW spectrum for future use, has really put a damper on my former enthusiasm. I also see the handwriting on the wall. Our vast spectrum, especially above 500 MHz, is way to valuable to future wireless service providers for us not to lose it in vast chunks in the near future. Therefore, the future of ham radio for me may very well be to use these services on *former* amateur frequencies. Time will tell, but for now, my license stays on the wall of my "shack."

In article <3A7AED99.58F50DD6@arrl.org>, Jon Bloom <jbloom@arrl.org> writes:

>
>Those who belittle hams who did not obtain their licenses under the old
>system deserve to have that behavior treated with comtempt because it is
>comtemptible. That has nothing to do with one's opinion of the value of
>code testing.

Jon:

What is truly contemptible is the raw laziness of those who ragged on and on ad infinitum about the uselessness of the code testing requirements, using the same specious arguments about how it was inhibiting the development of modern digital technology and keeping young people out of ham radio. What is equally contemptible is how the ARRL reversed its course on the support of code testing, the minute they saw a requisition for red ink from their accounting department. What is contemptible is the sappy, saccharine political correctness of ARRL officials who never saw a knuckle-dragging HT user they didn't fall in love with -- all the while staring directly at their wallets. What is truly contemptible is the way amateur radio no longer stands for any kind of meaningful accomplishments. Heck, learning isn't even required anymore, since the licensing requirements have been dumbed-down to insignificance. What is truly contemptible is how the National Association for Amateur Radio has found it necessary to insult the collective intelligence of both past, present, and future hams at the same time. Believe me, Jon -- when it comes to contemptible things, you ARRL guys know what you're talking about!

Personally, I have complete contempt for what ham radio has turned into. And, as the "National Association for Amateur Radio," I can't see anyone to blame but the ARRL. The way I see it, you (the ARRL) could have stopped Restructuring and supported, defended, and successfully retained the status quo in amateur radio license testing. You went for change for change's sake, only because the slouchers demanded it. Now, you get to lie in the bed you made.

If I read the statistics on the Speroni web site correctly, there has been a net gain of 4,063 licensed amateurs since Restructuring took place in April, '00. How many new ARRL memberships have been taken since then?

>ACTUALLY follow through. So what do you do? You try to knock it
>down!
>
>I can tell from personal experience that Code Quick works. Because it
>takes the drudgery (memorization of dits and dahs, listening to CW and
>waiting for divine inspiration, etc.) out of learning CW, it seems that
>everyone who tries Code Quick sticks to it. You CANNOT say the same
>about other methods.

Jason:

There are plenty of better methods. Simply learning the characters and getting on-the-air at 5 WPM is the best way to go. However, Code Quick makes a disasterous short-cut, by employing cutsey sound-alike phonetic phrases that require double or triple translation in the brain before the act of writing down a letter takes place. So, you're listening to "dadidadit" and you've got to think to yourself "that was 'dadidadit' so that sounds like 'Debbie did it' or something like that, and 'Debbie' starts with a 'd' so I'll write that down. Of course, the character sent was a "C," but who's counting? I think Code Quick is the most confusing, inhibiting, and inefficient Morse code learning programs ever devised. The attraction is certainly unmistakable, for it offers the proverbial free lunch -- and therefore, gets a strong following from the clients of the ham radio Welfare State.

>I challenge you to find anyone who tried Code Quick but failed.

Well, all I can say is, I know a lot of people who own the tapes, but none of them are regular CW users!

>I will agree with you that Code Quick alone isn't enough for 20+ wpm.

Damn straight! It practically wires your brain in a way that makes it impossible to get beyond 10 WPM. But, in these days of a 5 WPM maximum code test, I guess that's no longer a problem.

>Well, at some point, the Code Quick user has to start copying in
>his/her head. But at least there's nothing to unlearn.

Nothing but everything Code Quick taught them about character recognition! You see, Code Quick users didn't learn to react directly to the sound of a Morse code character -- they have to do the "translation" sequence in their mind before the light comes on and the write down the character.

>Larry, you obviously do NOT need Code Quick.

No, thank God, I don't! Oh, speaking of God, that's another problem I have with Code Quick. It indulges in religious proselytizing right in the middle of the tape. Specifically, fundamentalist Christian proselytizing. Why is religion brought into the program? What about potential customers who are Catholic, Jewish, Muslim, or any other non-fundamentalist Christian religion? If the guy wants to sell religious tapes, he should do so within the confines of that market -- and not include HIS specific religious beliefs in a program marketed to people from all walks of life who are interested in ham radio. Is there any disclaimer on the tape package? I've never seen any!

>But the "lazy No Code" crowd certainly does.

Well, I give you Brownie points for at least admitting that.

Show me someone from this group, and I'll show
>you someone who didn't use Code Quick.

Like I said before, I know a lot of people who own Code Quick --
but virtually none of them went on to be proficient CW users. They
may have passed their code tests, but they didn't gain the skill.
I'll stick with what works -- learning the sound of the individual
characters using the Farnsworth method, and getting 2-way practice
on-the-air.

T. L.:

Well, to some, it's a whined about as a "worthless, outdated hazing
ritual of high-speed code testing." To others, the relatively slow (even
at 20 WPM) code tests provided the incentive to learn and master a
useful communications skill in return for increased operating
privileges. I guess your mileage varies depending on your attitude
toward being a fully-capable radio communications hobbyist. If
all you want to pursue is the easy stuff, then code testing would

make you, well, testy! It's too bad the requirements easily achieved by tens of thousands of people from all walks of life were such a problem for you, if that's the case.

Cecil:

Wrong again, OM. I've equated whining about the code testing requirements to lack of class, and I've equated an unwillingness to make the effort to gain CW proficiency to lack of class (knuckle dragging, drooling, slack-jawed trailer trash, etc.). I don't think I've ever specified any minimum level of proficiency as being associated with a lack of class, however. Again, provide proof to support YOUR argument, or shut up!

>I know I certainly don't.

Jim:

If there were such a thing as an "Extra Cum Laude," then I'm the kind of person who would just go out and achieve it -- without whining about it. As a recent "non-traditional" college graduate, I achieved Summa Cum Laude status by making a diligent effort to ensure that I did fall within the parameters of that lofty status. Now, nobody can take that achievement away from me -- just like they can't take my Pre-Restructuring Extra-class achievement away from me!

My question for you is -- what do you have against striving to achieve a lofty goal?

Scales don't tip until the weight on one side exceeds the weight on the
other side.  There are still far greater numbers of code tested hams
than non-code tested hams. If you said that the scales are tipping, you
are wrong. Why couldn't you just say that there is a good growth rate in
the ____ class of license?

Having been thru two earthquakes including one with an epicenter in metro St. Louis in my days there, there is nothing in this world more terrifying. Earthquakes in the mid-Continent are not the localized (however severe) California type but cover vast areas. It is said that the big one in the early 19th century rang the church bells in Washington DC with aftershocks for months. Should another New Madrid occur, you can write off St. Louis, Memphis, and pretty much everything in between.

Two questions:

1. Dick, if you were involved in planning just what did the plan entail? How do you plan for Swampeast Missouri to essentially disappear?

2. For numbers alone, the amateur service cannot be planned for in any disaster scenario. The history is that we fortuitously appear like the gnomes in the night. The most obvious is H&W traffic which sort of implies a National Traffic System if things are not going to turn into a cluster. What sort of shape is it in? In Guatemala many years ago, the H&W traffic was flown into New Orleans on Pan Am and NTS from there. Still possible? Good solution for the remaining amateurs in Guatemala had better things to do and a long-term working relationship with the Red Cross was put into use to do H&W. The question is whether anyone at any level has even the barest outline of a sketch to handle anything like this?

I just got back into amateur radio after a three to four
year layoff. The language has changed a bit since I was last
active.

For instance, where did saying "QSL" or "Contact" come from?

Q codes are for CW, not phone. Saying QSL is the same as saying 10-4 to my ears.

Contact? I have no idea where this could have come from. The traditional method of injecting oneself into a conversation (which is rude if the conversation is between two hams), is to announce your callsign. If the participants want company, they will invite you into the conversation. If not, you will be acknowledged as the next in line for the frequency when their conversation is complete.

I'm not stupid enough to think that anyone cares about my opinion, so there's no need to be offended. It's just that even I, an ex-CBer during the seventies, can see some of the CB SSB language infiltrating the ham lexicon/culture.

Does it matter? Not really, but it does seem to make us seem a little less intelligent. After all, the rules for telephony state that we are to use plain language, not codes or ciphers. But then again, that's just my opinion.

Which doesn't mean they don't have some influence on how the readers of them view attitudes within ham radio. And I suspect the attitude toward newcomers you express here is not completely absent from your in-person behavior. It's hard for anyone to completely compartmentalize their feelings.

The only thing I've ever expressed contempt for is behavior that exhibits a lack of basic human respect for others. I can't help it if you find that "smug" and "arrogant." Frankly, I think those words far better reflect your attitudes than mine. As for your other contacts with ARRL HQ, I don't know the specifics. But since your reaction is precisely opposite from the one most HQ visitors display, I suspect your feelings have more to do with your prejudicial view of ARRL than with anything actually done by any HQ staff person.

Jon

Didn't say I couldn't Lennie. Just pointing out that you have been lying AGAIN. You have (recently) stated you don't do that kind of thing, yet you have been doing it to me for two years now and you started the "Jelly" comments on Fred. Fred did NOT make any such "endearments" to you, but you certainly have tried to rip him a new one.

Of course, I am sure if you keep it up and then start getting it in return from him, you will, as you have with me, claim "victim" status and then begin your own rhetorical abuses.

You always do.

Probably because in THIS case, Twitless, the calls are expiring due to non-renewal.

These were NOT calls vacated due to Vanity options. And NO, I would not deny anyone, even you, a Vanity call.

Now, run along and catch up to Uncle Lennie. Maybe he'll let you play with his hand puppet.

I'll be more than glad to relate that information as soon as YOU provide (as was requested MONTHS ago) names and other information of verifyable sources that can validate YOUR many claims.

And more than one person here knows the name of the company...even has my corporate addresses and phone numbers. You gonna call and chat, Lenni? I'll give you the 800 number if you care.

And by the way, I AM doing both. Again, unlike you, I saw that there were a great many things that I would like to do in my life. I may never completely master any one of them, but I will do my best to experience as many as I can.

No excuses as to why I didn't do it, other than I didn't do it. No "elitists" holding me back, or failed excuses.

> What is more amusing is this person's claim to once
> being a "commissioned officer" in some state militia,

Acutally, it requires a Captain. But I will pass on that in the future the Adjutant General shall call you first before assigning TO.

> When queried on this, said person replied he "had

> "confirmation" for everyone else.

Of which I offered a copy. You declined. Your loss.

> There's a four-letter word for persons like that

Which is one letter more than how we can describe you, Lenni.

The exercise of which would be a theoretical exercise.

PROVE THAT THERE WOULD BE A NEGATIVE NUMBER TODAY.

To show a period of some negative growth and say "See See!" is foolish. That's like trying to forecast all economy growth based on the 1930's.

>.....FCC's preferred since they are to only agency ganting amateur
>radio licenses

How do you "gant" an Amamteur license.

And why do you insist on insulting Joe Speroni by abandoning his database to look at others when it suits you?

> ...there, wasn't that simple? Even purchasing agents can do it.

Yep...sure was...and it still proves nothing. PROVE that the Technician Class license is the ONLY reason there is any "growth" in the Amatuer radio service.

PROVE that there was NO other viable option or that NOTHING else would have occured to spur changes.

We're waiting.

Brian,

Do you suffer from attention deficit disorder?  I have been publicly
calling it a ghetto for at least 10 years.

Even so, I don't expect I'll need permission from a dump huck like
you.

With all good wishes,

Hans, K0HB

Not in the least, Pal. Radiotelegraphy IS the basic radiocommunications mode, whether ham radio or whatever else. No other mode can be put to use with so little equipment requrements. ANY RF generator can be on-off keyed to form Morse characters. No other mode can do that. NONE. Any ham radio operator who is unable to make it work simply because he was to uninformed to cause himself to learn to be able to use it is thus unqualified by definition, as you are so fond of saying.

2meter FM is basic radio communication? On what planet?

Oh? I don't recall you saying anything about whining in your
St. Valentines Massacre postings. It's the very existence of
nocode techs that you objected to.

You are completely off your rocker, Dick, if you believe 2m FM is not
basic radio communications.

> And the son of a bitch had a restructured ham license.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 2.6.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 3.1 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

Yea, but will it read the e-mail in Morse.....sounds too
primitive...still needs work :)

Larry doesn't care whether or not hams have reached a certain level of technical proficiency. He only cares about how fast they can beep. He calls them "welfare hams", but welfare implies that something tangible is taken from someone who has, and is given to someone who doesn't have. Nothing tangible has been taken from Larry, but his blurred vision doesn't see things that way.

If present trends continue the only Hams left may be Olde Fartz.
Even if there are one Megafartz of old hams what will that mean if there are no new young hams to replace them in the future???

> > Despite this narrow-mindedness, the class of license doesn't prove whether or not the holder of said license is a "real ham".

IMHO the narrow-mindered are those who only consider their own interests and could care less about the survival of Ham Radio.

> No, but it beats hell all out of any nocode qualification seen to date.

I have recently joined an e-mail group for QCWA members (or old farts as some might say). The QCWA and its chapter clubs are struggling with the problem of decreased active membership and not enough new members to replace the silent keys...just as most of the ham clubs, who are honest about it, are ready to admit. I would bet that the membership in most ARRL affiliated ham clubs is also decreasing or will soon be decreasing. Some QCWA leaders want to open up membership to all hams who have not yet met the 25 year requirement. This is not unlike the Ham leaders who have been continuing to press for simplified ham license requirements. The trouble is that such changes can only lead to further disinterest and active participation in ham radio by those whop have previously qualified. It also leads to a loss of PRIDE...even a loss of prestige for ham radio as a hobby. People who might be considering becoming hams can not be positively influenced to enter a hobby which can not retain the kind of pride it has had in the past.

The USA and world cultures are changing. In the 1950s people thought that TV would take up so much of peoples' time that they wouldn't be active in clubs and hobbies. It didn't have as much of an effect as was feared on ham radio. BUT...today there are more options for people who are interested in using technology as a hobby. Unlike TV, but like Ham Radio, The Internet and cellular phones are interactive..That is, they are two way communication systems which offer the ability to make new friends and discuss stuff with individuals and with groups worldwide..and to get and give opinions and education about any matter that might be of interest, technical or not. Today's young techie nerds, hackers and gurus are as interested in computers as we must have been interested in Ham Radio. They think that Ham Radio is just for old farts. They might join a computer club to learn more about their opertating systems or to swap software...but they won't have any time left for a Ham Club.

My opinion is if you want ham radio to survive and to eventually interest more people you have to make it more technically educational; not easier to advance to "Extra" class. Ham Radio is far behind modern communication technology and must be advanced to the relative point where it was in 1950. To do this we need more higher level technical requirements for the higher level hams...although we still need easy entry requirements to help get youngsters started. This is in opposition to the present ARRL policy. The ARRL leaders can not seem to get it into their heads that to attract new members and to keep some present hams active...you have to give some PRIDE back to all Hams, by encouraging those who want to, and can qualify for advanced modern technical ham ability (as real hams, if I may), to take more and better high level technical exams. Forget high speed CW, but make high technology the mark of a real Ham....If not the goal...If not just the BASIS anmd PURPOSE of the whole hobby!

Hams need more license classes.

Yep...
We have discussed Segal's "The Amateur's Code" here before.  It does
not mention CW, BUT the spirit of it is to say that a real ham is
technically qualified to be: -
PROGRESSIVE...with knowledge abreast of science...

How are we proving that real hams must be "abreast of science" by
reducing technical requirements for Extra class. by eliminating
Advanced Class, and by not making ham technology compatible with modern
electronic communication technologies?

> > No, but it beats hell all out of any nocode qualification seen to

Congratulations you figured it out....to continue.....more enforcement
that then forces the FCC to decide to terminate ham radio because it is
out of control.

Wonder how much money 75 meters will bring?

Actually, many of the Code Quick users reported passing the 13wpm and
20wpm Morse Code exams before last year's restructuring. Also, many of

the satisfied Code Quick users include people who ran into roadblocks using more conventional methods.

I will personally try moving up to faster Morse Code speeds. Maybe CW will allow me to work the 80m band, as SSB seems to be heavily distorted and/or noise-infested.
